Annual Influenza Vaccination Clinic

DATE 10-2-2023

Dear Parents/guardians:

Foxcroft Academy is working with Katahdin Valley Health Center to host the annual influenza vaccine to children at school. This vaccine will protect against all three influenza strains that are expected to circulate this year. We will hold our annual vaccination clinic on October 20-2023. Please find the included Vaccine Information Statement about the disease and the vaccine. There will be no cost to you for this vaccine, but KVHC will bill a $22 administration fee to your child’s insurance plan. I am sending you a form that will be required to be completed and signed consent if you wish to accept the influenza vaccination for your child. If the form is not complete including insurance information, your student will not receive the influenza vaccine. If you refuse and do not consent to the vaccine, simply do not return the form.

If you have any questions about the vaccine or the vaccination clinics, please call: 207-564-8351 from 8 AM to 3 PM and ask to speak with the school nurse. Please visit the CDC’s influenza web site at http://www.cdc.gov/flu/ and also http://www.cdc.gov/flu/parents for information especially for parents. Your child’s health care provider also can answer your questions about the influenza virus and will be able to give your child the seasonal influenza vaccine.

Sincerely,

Kimberly Orff, BSN, RN
School Nurse
Foxcroft Academy

Is this person an American Indian or an Alaskan Native? □ yes □ no

Is this person uninsured? □ yes □ no

Is this person insured by MaineCare (Medicaid)? □ yes □ no

MaineCare ID #: __________________________

Private Insurance? □ yes □ no

Name of Insurance Company: __________________________

ID Number: __________________________ Group Number: __________________________

Subscriber Name: __________________________ Subscriber Date of Birth: __________________________

Subscriber Social Security Number: __________________________

Doctor's Name: __________________________ Phone Number: __________________________

Please answer the following questions about the person named above. Comments may be written on the back of this form.

1) Does this person have a severe (life-threatening) allergy to eggs?

2) Has this person ever had a severe reaction to an influenza immunization in the past?

3) Has this person ever had Guillain-Barre Syndrome?

If you answered “yes” to any questions 1-3, please see your healthcare provider for influenza vaccination.

PERMISSION TO VACCINATE

➢ I was given a copy of the Influenza (Flu) Vaccine Information Statement, I have read this or had this explained to me and I understand the benefits and risks of the Influenza vaccine.

➢ I give permission for a record of this vaccination to be entered into the ImmPact Registry.

➢ I give permission for information to be used to bill MaineCare or private insurance for the cost of providing the vaccine.

➢ I give my consent for this person to receive the most appropriate vaccine, as determined by the health care clinic staff.

➢ I give permission for the flu vaccine to be given to the person named above by signing below.

State Supplied Y N
Influenza (Flu) Vaccine (Inactivated or Recombinant): What you need to know

1. Why get vaccinated?

**Influenza vaccine** can prevent **influenza** (flu).

Flu is a contagious disease that spreads around the United States every year, usually between October and May. Anyone can get the flu, but it is more dangerous for some people. Infants and young children, people 65 years and older, pregnant people, and people with certain health conditions or a weakened immune system are at greatest risk of flu complications.

Pneumonia, bronchitis, sinus infections, and ear infections are examples of flu-related complications. If you have a medical condition, such as heart disease, cancer, or diabetes, flu can make it worse.

Flu can cause fever and chills, sore throat, muscle aches, fatigue, cough, headache, and runny or stuffy nose. Some people may have vomiting and diarrhea, though this is more common in children than adults.

In an average year, **thousands of people in the United States die from flu**, and many more are hospitalized. Flu vaccine prevents millions of illnesses and flu-related visits to the doctor each year.

2. Influenza vaccines

CDC recommends everyone 6 months and older get vaccinated every flu season. **Children 6 months through 8 years of age** may need 2 doses during a single flu season. **Everyone else** needs only 1 dose each flu season.

It takes about 2 weeks for protection to develop after vaccination.

There are many flu viruses, and they are always changing. Each year a new flu vaccine is made to protect against the influenza viruses believed to be likely to cause disease in the upcoming flu season.

Even when the vaccine doesn’t exactly match these viruses, it may still provide some protection.

**Influenza vaccine does not cause flu.**

Influenza vaccine may be given at the same time as other vaccines.

3. Talk with your health care provider

Tell your vaccination provider if the person getting the vaccine:
- Has had an allergic reaction after a previous dose of influenza vaccine, or has any severe, life-threatening allergies
- Has ever had Guillain-Barré Syndrome (also called “GBS”)

In some cases, your health care provider may decide to postpone influenza vaccination until a future visit.

Influenza vaccine can be administered at any time during pregnancy. People who are or will be pregnant during influenza season should receive inactivated influenza vaccine.

People with minor illnesses, such as a cold, may be vaccinated. People who are moderately or severely ill should usually wait until they recover before getting influenza vaccine.

Your health care provider can give you more information.
4. Risks of a vaccine reaction

- Soreness, redness, and swelling where the shot is given, fever, muscle aches, and headache can happen after influenza vaccination.
- There may be a very small increased risk of Guillain-Barré Syndrome (GBS) after inactivated influenza vaccine (the flu shot).

Young children who get the flu shot along with pneumococcal vaccine (PCV13) and/or DTap vaccine at the same time might be slightly more likely to have a seizure caused by fever. Tell your health care provider if a child who is getting flu vaccine has ever had a seizure.

People sometimes faint after medical procedures, including vaccination. Tell your provider if you feel dizzy or have vision changes or ringing in the ears.

As with any medicine, there is a very remote chance of a vaccine causing a severe allergic reaction, other serious injury, or death.

5. What if there is a serious problem?

An allergic reaction could occur after the vaccinated person leaves the clinic. If you see signs of a severe allergic reaction (hives, swelling of the face and throat, difficulty breathing, fast heartbeat, dizziness, or weakness), call 9-1-1 and get the person to the nearest hospital.

For other signs that concern you, call your health care provider.

Adverse reactions should be reported to the Vaccine Adverse Event Reporting System (VAERS). Your health care provider will usually file this report, or you can do it yourself. Visit the VAERS website at www.vaers.hhs.gov or call 1-800-822-7967. VAERS is only for reporting reactions, and VAERS staff members do not give medical advice.

6. The National Vaccine Injury Compensation Program

The National Vaccine Injury Compensation Program (VICP) is a federal program that was created to compensate people who may have been injured by certain vaccines. Claims regarding alleged injury or death due to vaccination have a time limit for filing, which may be as short as two years. Visit the VICP website at www.hrsa.gov/vaccinecompensation or call 1-800-338-2382 to learn about the program and about filing a claim.

7. How can I learn more?

- Ask your health care provider.
- Call your local or state health department.
- Visit the website of the Food and Drug Administration (FDA) for vaccine package inserts and additional information at www.fda.gov/vaccines-blood-biologics/vaccines.
- Contact the Centers for Disease Control and Prevention (CDC):
  - Call 1-800-232-4636 (1-800-CDC-INFO) or
  - Visit CDC’s website at www.cdc.gov/flu.
