## **DP Science Trip to Point Pinole**

Photo taken during Field Trip

The IBDP science classes at Cordova High continued an annual tradition in September. Students from Chemistry, Biology, and Environmental Systems & Society took a trip to Point Pinole where they gathered data for their cross-curricular research study. "Super Science Day" as it's called, allows for collaboration with peers, scientific inquiry, real-world investigation, data analysis, and hands-on learning. More photos on the following page show science in action.

## IB Career Programme Goes Virtual

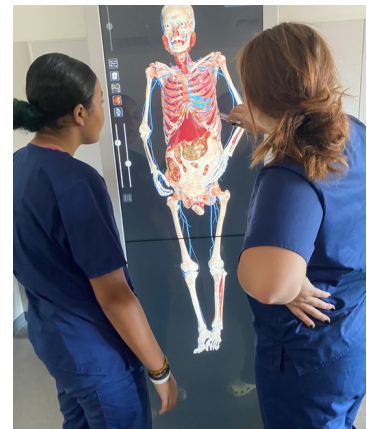

*Photos taken by Dr. Chris Mahaffey*

The IB Career Programme in Patient Care offers multiple certificates and trainings to the CHS juniors and seniors. During their two-year commitment, IBCP students gain skills and knowledge to better prepare them to be medical professionals.

Seniors receive hybrid, online, and in-person CPR training. Many of them are excited for the new skill to add to their resume and to start applying entry-level jobs in the healthcare industry.

## Past Personal Projects

*Photos submitted by CHS students*

The MYP Personal Project allows students to explore, exhibit and expand their Approaches to Learning Skills in a structured research model with the guidance of a trusted mentor. In past years, students have started new clubs, recreated favorite novels in Minecraft, written poetry and short stories, and created PSA videos and websites for matters of intense personal interest such as mental health resources, cleaning ocean pollution, sports injuries, and celebrating personal cultural.

Projects were presented in the CHS library during Spring Activities Day.
