2020-2030, Forecasted Population Growth Rate

Projections assume that the current economic, political, social, and environmental conditions in the school district will remain constant throughout the projection period. Projections do not take into account changes to factors that may influence the demographic profile of the population.

A **forecast** results when a projection is modified to consider such changes. These factors include migration patterns of families into and out of the school district, existing housing sales or rates of new home construction, and total fertility rates. (NFES 2012).

When predicting student enrollment for school districts, planners should address all factors affecting a school district's demographic profile, recognizing that if any of these factors change, the enrollment projection may also change (McKibben 2003).

Elementary School Population Change Forecast

	2020	2025	2020-2025 Change	2030	2025-2030 Change	2020-2030 Change
Ballentine	9,010	9,910	10.0%	10,610	7.1%	17.8%
Chapin	11,000	12,040	9.5%	12,740	5.8%	15.8%
Dutch Fork	7,980	7,870	-1.4%	7,720	-1.9%	-3.3%
H. E. Corley	6,990	7,160	2.4%	7,280	1.7%	4.1%
Harbison West	8,260	8,590	4.0%	8,800	2.4%	6.5%
Irmo	7,850	8,020	2.2%	8,080	0.7%	2.9%
Lake Murray	11,420	12,780	11.9%	13,640	6.7%	19.4%
Leaphart	7,820	7,640	-2.3%	7,390	-3.3%	-5.5%
Nursery Road	7,040	6,930	-1.6%	6,690	-3.5%	-5.0%
Oak Pointe	5,680	5,690	0.2%	5,630	-1.1%	-0.9%
Piney Woods	7,520	7,670	2.0%	7,830	2.1%	4.1%
River Springs	5,370	5,370	0.0%	5,350	-0.4%	-0.4%
Seven Oaks	7,630	7,400	-3.0%	7,170	-3.1%	-6.0%
District Total	103,570	107,070	3.4%	108,930	1.7%	5.2%

1. The resident total fertility rate for School District Five of Lexington and Richland Counties over the life of the forecasts is below replacement level. (1.83 vs. the replacement level of 2.1)
2. Most in-migration to the district continues to occur in the 0-to-9 and 25-to-44-year-old age groups.
3. The local 18-to-24-year-old population continues to leave the district, going to college or moving to other urbanized areas. This population group accounts for the largest segment of the district's out migration flow and will increase steadily over the next 10 years. The second largest migration outflow is in the 70+ age groups.
4. The primary factors causing the district's enrollment to increase over the next five years is the slowing of the increase in empty nest households, the relatively high number of elderly housing units turning over coupled with a sustained rate of in-migration of young families.

5. Changes in year-to-year enrollment over the next ten years will primarily be due to small cohorts entering and moving through the school system in conjunction with larger cohorts leaving the system. **The 12th grade class will average 1,417 students over the next 10 years, compared to 1,264 students over the last five years.**
6. The elementary enrollment will slowly increase after the 2026-27 school year.
7. The median age of the district's population will increase from **40.4 in 2020 to 42.8 in 2030.**
8. Even if the district continues to have a substantial amount of annual new housing unit construction over the next 10 years, the rate, magnitude, and price of existing home sales will become the increasingly dominant factor affecting the amount of population and enrollment change.
9. Total district enrollment is forecasted to increase by **695 students, or 4.0%, between 2022-23 and 2027-28.** Total enrollment will decrease by 248 students, or -1.4%, from 2027-28 to 2032-33.
