Date: October 5, 2023

Re: Fenton Community High School District 100

Asbestos Abatement Project - Building Occupant Notice

This is to inform you that a State licensed environmental contractor, **Celtic Environmental**, will abate approximately 11,200 Square Feet of asbestos mastic/vapor barrier from the entire gym area. Celtic Environmental, will also abate 875 Square Feet of floor tile/mastic in the entire classroom 201 area beginning October 19, 2023 and ending on October 31, 2023.

Areas will be isolated from the remaining parts of the school until final air quality standards are achieved. The Illinois Department of Public Health, from Federal Regulations, has adopted these standards. During the removal process, air-scrubbing machines will be running 24 hours, and an independent, State licensed, environmental consultant will be in the work area managing the process and taking daily air quality samples.

At the completion of the work an Asbestos Project Managers' report will be prepared and submitted to the School District and Illinois Department of Public Health. This is a permanent record of the work activity and all sampling data.

The School's copy will be in the School's administrative office and is available to the public for reviewing. An appointment should be made to review this document. It cannot be removed from the Administration Offices. Upon request a copy can be purchased from the School District.

All the removal, management and documentation work will be performed in accordance with Illinois Department of Public Health's Rules and Regulations.
