

DIVISION 14 - CONVEYING SYSTEMS

- A. In new buildings, where elevators are necessary, specify standard hydraulic commercial elevators with 2,000-lb. capacity, as manufactured by Dover, Montgomery, Otis, or equal.
- B. If storage areas utilize crawl space or basement, locate elevator to provide access to this level.
- C. In renovation projects, where vertical transportation is required for ADA purposes, standard commercial elevators with 2,000 lb. capacity are preferred, but consult with Facilities Department for possible use of vertical access lifts, for low-demand usage. If vertical access lift is chosen, it shall have a 750-lb. minimum capacity.
- D. Key operated controls for building elevators are required.
- E. Emergency telephones in elevator cab shall be coordinated with building communication/phone system.
