Project Overview

The Master Facility Plan (MFP) RFQ required the creation of a plan that included…

1.d. "Detailed analysis of school and community demographics".
1.f. "Addresses current and future facility needs taking into consideration demographic projections over the next five years and ten years".
1.g. "Considers the implications of future boundary changes or redistricting in lieu of investing in current buildings past their useful life will address any of the future needs of the District".

Accordingly, the purpose of this report is twofold; one is support decision making regarding buildings and facility uses. The other is to support the development of redistricting scenarios based on building plans, student and program capacities, and spatial feature considerations.

The detailed analysis of school and community demographics was operationally defined as an analysis of the following:

a) Total population and population change;
b) Total household and family change;
c) Changes projected in population diversity, race, and ethnicity;
d) Changes in the age composition of the population with a focus on preschool and school-ages.

The analysis of current and future facility needs required the development of enrollment projections by grade with a focus on enrollments in grades K through 8 and based on birth and student addresses. These data were geocoded to parcel and address point geography. Other items of interest in the course of this research included the following.

a) Concentrations of students in particular attendance areas and neighborhoods;
b) Magnet school attendance;
c) Births within attendance areas;
d) Resident student racial characteristics by attendance area and grade;
e) Possible impacts of housing change using housing characteristics of resident students.

The consideration of future boundary changes required the collection of student and birth data within current attendance areas for the development of redistricting scenarios based on existing enrollments and building capacities. This required the development of a base map that would support the following.

a) Geocoding student and birth addresses;
b) Summing historical counts of student and birth addresses by current attendance areas;
c) Developing sub areas of attendance areas with counts of student and birth addresses for modifying and generating new attendance boundaries based on planning parameters which included but are not limited to the following:

    1) Consolidating the Willard Island attendance area;
    2) Considering the building of a new school in Ward 5;
    3) Assigning students based on school proximity;

4) Assigning students based on building capacities and programming exigencies.

The development of a database that provides general demographic and housing information and a database that contains birth and student data over time provides the foundation for this geodemographic study and support for the MFP. The district's acquisition of these data and the methods and sources used to create these databases may be updated in the future with data from the district's student information system, the State of Illinois' collection of birth records, Cook County's Assessor records, spatial data from Cook County's Open Data Portal, and Esri's ongoing development of estimates and projections that feature a current estimate and 5-year projection interval.

Data and Methodology

The source of data for the detailed analysis of school and community demographics is Environmental Systems Research Institute's (Esri's) Updated Demographics. The Esri Methodology Statement is provided in the Appendix (Administrative Documents). These data were acquired for decennial census block groups that intersect district boundary lines. In all, there were 67 block groups found to include all or portions of district attendance areas. Map 1 (Appendix, Maps) provides an overlay of district boundaries and census block groups.

As shown in Map 1, there is a close correspondence between block group and district boundaries. Block groups to the western edges of the district include areas outside of the district and not all of the Dawes attendance area is enclosed by block group boundaries. Even though there is not an exact fit, total estimates and projections of demographic and housing variables should provide a close approximation of actual district totals.

However, the same cannot be said for district attendance areas. Map 1 shows attendance areas in heavier red lines with block group boundaries in heavier black lines. District school locations are shown with a green point symbol. With the large amount of attendance area splits by block groups, it is not appropriate to aggregate block group data to attendance areas. Accordingly, the comparison of Esri data will be limited to block group and district geographic levels.

As discussed in the Esri Updated Demographics Data and Methodology Statement, estimates and projections of demographic, socioeconomic, and housing variables have been generated from a number of sources including, inter alia, the American Community Survey, Current Population Survey, Bureau of Economic Analysis, Zonda, RealPage, and Postal Carrier Deliveries databases. Tables 1 through 10 provide Esri breakdowns of estimated (for 2021) and projected (for 2026) population, household, family, diversity, housing, age groups of elementary and middle school populations, and racial composition of block groups intersecting district boundaries. The size of the single year of age and race by sex by age tables are large and not suitable for replicating in this document. Consequently, these tables have been provided in Excel format to the Manager of Student Assignments.

Maps 2 through 7 (Appendix, Maps) provide thematic maps of estimated (from 2010 to 2021) and projected (from 2021 to 2026) annual growth rates of population, households, and families for district block groups. Block groups shaded red indicate estimated and projected declines. Shading in orange and green may be interpreted as very small negative and positive changes, respectively. Lighter and darker blue coloring indicated block group with smaller and larger positive changes, respectively. Legends of these maps indicate data breaks. School locations have been provided for visual reference.

The development of a base map to support geocoding and all general-purpose mapping requirements was necessary for several reasons. First, the district's base map showing attendance areas appears to have been drawn on older Sanborn ™ city block maps without any geographic referencing and drawn to different scales. Other than rubber-sheeting these images, district and attendance area boundaries could not be drawn precisely on the map images and accurately overlayed with a number of other datasets. Second, the base map needed to provide the means of geocoding (or address matching) both student and birth records for the development of an enrollment projection model. Third, the base map needed to reference and provide a visual means of analyzing housing data obtained through the Cook County's Assessor's Office. And fourth, the base map needed to support the development of redistricting scenarios with smaller area geography that is congruent with current attendance area boundaries.

To address these requirements, the base map developed for and used in this study is based on 2021 Cook County parcels, address points, and streets that were obtained from the Cook County Open Data portal. These data provided the accuracy and precision of digitizing district and attendance area boundaries, geocoding student and birth records, overlaying student and birth record geographic data points (X,Y coordinates), associating district geography with these points, and developing sub area geography for redistricting and other planning purposes. These data may be updated as streets, addresses, and attendance area geography change in the future.

With the selection of a stable map base, it was necessary to check district boundaries and digitize current district attendance areas. Map 18 (Appendix, Maps) shows the base and the final boundary lines. These boundaries were verified by district administrative staff and considered final for the next step in defining sub or planning areas for redistricting. To provide an empirical basis for drawing sub areas, district administrative staff were provided maps showing current student enrollment counts by blocks and a kernel density map showing student residential concentrations (Appendix, Maps, Maps 19, 20, and 21). The geocoded student record point cloud is shown in Map 19. These data were associated and tallied by census block. The thematic map (in Map 20) provides counts of students by block with lower block counts represented in blue and higher student counts shown in red. The kernel density map (Map 21) shows statistical residential concentrations of students with brighter areas indicating larger concentrations and darker areas showing lower concentrations. These maps were provided for larger formatted printing (e.g., on E-size or 34" by 48" paper). The detail included addresses and street names which may not be clear in the letter-sized maps provided in the Appendix (Maps).

With these maps and supporting statistical tabulations, district administrative staff began the process of determining sub area boundaries. These boundaries were to be drawn within and congruent to existing attendance boundaries. Also, the boundaries of these smaller areas were to take into account cultural geographic features (such as highways, railroad, water bodies) which would impede access to school buildings. The attendance area maps with parcels and addresses were provided in pdf file format, plotted on larger size paper (E-size), and sent to the district. Iteratively, district administrative staff drew, submitted, and reviewed boundary lines of sub areas which were finalized over several meetings.

Maps 22 through 32 (Appendix, Maps) provide the sub area delineation results by attendance area. In attendance areas, sub area geography is drawn in heavier light grey lines. Each sub area was uniquely numbered in attendance areas which provided the capability of counting and crosstabulating student and birth counts by attendance and sub areas. These sub areas may be thought of as building blocks for modifying or creating new attendance areas based on building capacities and other decisions regarding building futures.

To take into consideration student enrollments currently, over the next 5 years, and the following 5 years for the MFP, it was necessary to develop enrollment projections by existing attendance area geography using student residential locations and the residential locations of birth events over a period of 10 years. Appropriate safeguards for maintaining student confidentiality were implemented (see Appendix, Administrative Documents, Student Data Privacy Agreement). The district provided 95,522 records that spanned the last 10 academic years as of September 30. Student records for 2021 were also included and processed in the dataset received in August, 2021. In all, 90,932 or 95% of the student records were geocoded successfully or address matched to the district's parcel and address point base map. Of the remaining 4,650 unmatched student records, the district was provided 425 unique addresses to manually review. Adding the results of this review to the matched, in-district

student count, resulted in a total of 78,825 student records in grades K-12 from school years 2012-13 through 2021-22.

It must be noted that the 2021-22 student record count was taken from August 2021 enrollment records. Another file of 2021-22 records was provided by the district which was 461 student records lower than the total counts in the August file. Comparing the total student record counts from the two student record data sets and, after consulting with the district on the differences in totals not only for the 2021-22 school year but also the goodness of fit of the 2021-22 student records from the August data set compared to Illinois State Board of Education (ISBE) enrollment totals, it was decided (jointly) to use the first dataset in its entirety (i.e., records obtained in August, 2021).

The student enrollment file provided by the district contained several items of interest for further use in district program planning. These included student race and ethnicity (combined) and attendance assignment. The process of geocoding student addresses and spatially overlaying these data with the district's attendance and sub areas retained these data with residential student locations and attendance and sub area coding. Totals of data on student race appear in Table 30 (Appendix, Tables and Graphs). Due to the size of this table, only counts of records by attendance and sub areas are shown in this report. The original student records with the pivot tables were provided to the district's, Manager of Student Assignments.

Magnet school attendance was also of interest to the MFP principals. Map 45 shows students by residential location attending district magnet schools. From these data, it was determined that over 10% of district students attend magnet schools, though the total numbers of magnet school attendees have been declining. In 2017, 961 students enrolled in magnet schools. The numbers dropped to 908 in 2018, 822 in 2019, 712 in 2020, and 645 in 20201. Maps 46 through 50 (Appendix, Maps) show concentrations of students residing in attendance and sub areas that attend magnet schools. It is of interest to note the consistent concentrations of magnet school students residing in the lower eastern corner of Oakton, eastern areas of Walker, and the southern half of Lincolnwood extending into the Walker Island attendance areas. This is an important finding for existing building capacities and uses. Table 31 (Appendix, Tables and Graphs) provides counts of students attending magnet schools by attendance area of residence and school year. The table also includes sub area assignment; however, due to the size only the totals by attendance area are shown. These data were provided to the district's, Manager of Student Assignments.

To develop enrollment projections for Kindergarten cohorts (or classes) using birth data, the district entered into a data use agreement with the Illinois Department of Public Health (IDPH) (see Appendix, Administrative Documents, IDPH Data Use Agreement) to access live birth event records over a period of 10 years. These records included the birth month, birth year, full address of mother, and zip code of mother's address. Geocoding of these records took place at IDPH offices in Springfield, Illinois. On October 12, 2021, the IDPH provided 28,500 records that were extracted by zip codes provided by the district. With several successive passes over the unmatched record set and with corrections applied to the address data to match records to the district's base map, over 98% of the records were matched successfully, leaving 242 records that required manual review. This review took place on November 22, 2021 at IDPH offices in Chicago, Illinois. The review added 30 birth records to the existing matched count of 28,258 to produce a final record count of 28,288 and a 100% match rate.

Counts of student and birth records by school year and sub area were entered into a cohort enrollment projection model. This model arranged student counts by classes or cohorts by school year and attendance area. Birth counts were added to the model by Kindergarten cohort or class

coding using birth month and birth year to assign year of Kindergarten eligibility. Birth and enrollment totals were calculated by attendance area. Cohort survival ratios were generated from a comparison of previous grade enrollments. Using the last 5 years of enrollments, weighted cohort survival ratios were calculated by grade for each attendance area. These ratios provided the means of generating high, mid, and low enrollment projections by applying these ratios to the last known series of enrollments (i.e., 2021 enrollments) by grade and attendance area. High series enrollment projections use the highest three cohort survival ratios over the last 5 school years to develop a meta-statistic which is applied to the latest enrollments to develop a high series of enrollment projections. Similarly, mid projections use the middle three and low projections use the three lower cohort survival ratios. A fourth series of enrollment projections were generated using cohort survival ratios from the last two years of enrollments. This series provides enrollment projections that may be used to assess the impact of the Covid pandemic on existing and future enrollments and the direction of enrollments if current enrollment trends continue over the next 5 years.

The availability of birth data through calendar 2019 provided the means of developing kindergarten cohort survival projections through September 30 of 2025-26. For school years 2015-16 and 2025-26, births were annualized or projected from 8 and 4 months of actual birth data, respectively. As birth data for 2020 become available (planned for late spring 2022), the birth counts for 2025-26 can be finalized and tentative projections of births for 2026-27 may be generated and added to the district's enrollment projection model.

The MFP stipulated enrollment projections for periods of 5 and 10 years. To extend the projection model, births from the last 10 years were extrapolated to 2031-32. Cohort survival ratios were applied to these births and the cohort enrollment projections in the 2022-2025 projection window. This processing resulted in extrapolated projections by grade and attendance areas for school years 2026-27 through 2031-32.

Tables 15-28 (Appendix, Tables and Graphs) provide the high, mid, low, and snapshot projection series by grade and attendance area for enrollments projected using actual births and empirical cohort survival ratios in school years 2022 through 2025 and extrapolated enrollments using extrapolated births for school years 2026 through 2031. The projected enrollments are shaded in light grey and the extrapolated enrollments are shaded in a darker grey. A roll-up of births and actual and projected enrollments is contained in Table 29 (Appendix, Tables and Graphs). Graphs 6-14 (Appendix, Tables and Graphs) immediately follow Table 29 and show district-wide enrollment projections by grade starting with Kindergarten enrollments through eighth grade. Line graphs were chosen to present these data with the intent of tracing enrollments based on cohorts through the projection intervals. Areas in these graphs are shaded in light grey and a darker grey to indicated projected and extrapolated projections, respectively. Also, enrollments impacted by the Covid pandemic are indicated. Projected and extrapolated enrollments trend lines are shown in blue (high), red (mid), green (low), and purple (snapshot) for the respective projection series.

Following district-wide graphs, projected and extrapolated total enrollments for attendance areas are shown using the same area delineations with light grey indicated projected enrollments and darker grey shading indicating extrapolated projections. In addition, kindergarten enrollments and birth counts are compared for each attendance area. Birth trends and extrapolations are shown with heavier yellow lines. Projected and extrapolated kindergarten enrollments trend lines are shown in blue (high), red (mid), green (low), and purple (snapshot) for the respective projection series.

Maps of demographic and household variables, base maps, geocoding results, and kernel density grids appear in the following map section of the Appendix (Maps). The typical map composition provides

map legend information at the lower left corner, map title centered at the top, and date and source of mapping data at the lower right corner. Where appropriate, the thematic and kernel density maps show district sub area geography on top of colored or black to white statistical shading which may be used to identify areas in the district represented in the theme or locations of concentrations of student and birth events.

An important element of the study is housing characteristics and values in and by attendance areas and among housing units occupied by district students. A hypothesis drawn from the analysis of demographic and housing data from Esri and enrollment projections concerned the availability of affordable housing in the district and continuing trends in the Evanston/Skokie real estate market. To study this issue, the district requested access to Cook County Assessor data which, provided at the parcel level, provide housing characteristics and assessed value. These data were downloaded using the district's account provided by the Assessor's office and joined to a parcel map that extended 5 miles from the center of the district. It was determined that parcels in the norther part of the district and south of the district in the Rogers Park area were missing Assessor records (see Appendix, Maps, Maps 51-53). It appears that these data have not been posted for tax year 2020 as of the date of this report. Attempts were made to contact the Assessor's Office and the Township Assessor without success. As these data are found, an addendum will be provided to this report.

Administrative documents are provided in the last section of the Appendix. These include the original letter of engagement, student confidentiality, and data user agreements.

Findings

A number of observations follow from a review of the Esri Updated Demographic tables for 2021 and 2026.

Over the next 5 years or from 2021 through 2026 with July 1 as the effective date…

- Projected population is expected to remain steady over the 5-year interval. A comparison of estimated and projected population totals put the percentage change at -.5%.
- Projected population in households and families is expected to decline slightly (-.6% and 1.0%, respectively).
- Population diversity in the district ranges from highly unlikely (low diversity) to highly likely (high diversity) of 2 individuals at large and within the same block group encountering a person of different race or ethnicity.
- Both households and families are expected to stay at about the same levels or decline slightly.
- Projected average household size is expected to stay the same with average family size declining slightly.
- It is not expected that the number of housing units will change substantially.
- There will be a minor flip of renter-occupied to owner-occupied units.
- The data indicate larger variations in percentage changes of vacant units among district block groups; overall, the district vacancy rate will remain at roughly 9%.
-

The single year of age tables provides the data granularity to approximate total numbers of persons that may attend various grades in the district. For comparison purposes, persons by year have been combined to reflect estimated and projected totals of persons under 1 year, 1-2 years, 3-5 years (preschool ages), 6-11 years (elementary K-5 school ages), and 12-14 years (middle school ages).

Using the same timeframe comparison…

- The total population under 15 years is expected to decline by about 5%.
- The larger percentage decline will take place in the middle school-aged population (-11%).
- Elementary grade population will decline by 6%.
- It is expected that the population under 1 year will increase by about 2%.
- Larger increases are observed in the 25-29, 40-44, and 65 and over age categories.
- Larger declines are seen in the 10-14, 30-34, and 55-59 age groups.

Consistent with Esri's diversity indices, the racial characteristics and composition of the district's population is expected to increase with more persons of other than white or black racial identification.

Again, using the same timeframe comparison…

- The white population is projected to decline by about 3%.
- The black population will increase significantly, from an estimated 7,291 persons in 2021 to 12,383 persons in 2026 (representing a change of about 70%).
- The other population is prominent in the district but is expected to decline by 16%.
- Although declining, the white population is the dominant racial group with estimated and projected percentages of the population above 60%.
- The black composition of the population will increase from 8.3% to 14.2%.
- The other than white and black population composition will decline from 28.8% of the total population to 24.3%.

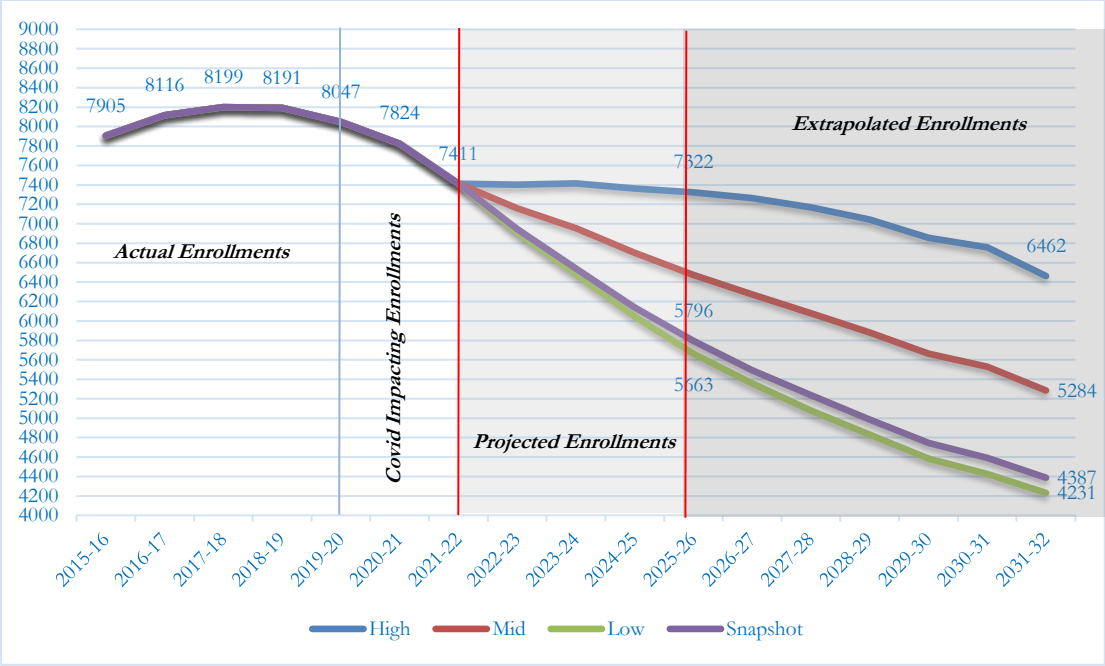

Based on the age and race tables, it appears that the district's population is aging or in a phase of incipient decline. The larger decline in the population under 20 years and the increase in the population 65 years and older are definite signs of population aging. It's interesting to note the projected declines in the 45-49-, 50-54-, 55-59-, and 60–64-year age groups which may be due to socioeconomic and housing factors. Also, it is noteworthy that the 30-34- and 35-39-year age groups are projected to decline which could explain the projected decline in the population under 10 years of age.

Tables 1 through 12 (Appendix, Tables and Graphs) contain the Esri tables of population and housing, age, and race statistics. Percentage changes for variables included in these tables appear by block group in following tables. Maps 2 through 7 (Appendix, Maps) show estimated and projected annual growth rates of total population, households, and families by block group. Maps 8 and 9 (Appendix, Maps) show estimated and projected diversity with Maps 10 through 15 showing estimated and projected race breakdowns using white, black, and other race categories. These maps use the same category percentage breakdowns of the white, block and other population to highlight projected changed in race composition across the district. Comparisons of Maps 11 and 14 (Appendix, Maps) showing black population concentrations and Maps 12 and 15 showing other population concentrations highlight the increasing diversity projected in the district .

Maps 16 and 17 (Appendix, Maps) show comparatively large gains projected in median household and per capita income with only a few block groups in the district expected to decline in median household income. Three of these block groups are in the central corridor and adjacent to Northwestern University. The one block group showing larger decline in household income appears (colored red) in the Oakton attendance area.

The development of enrollment projections using geocoded birth and student records portends a decline in K-8 enrollments through 2025-26 and further out to 2031-32. Graph 1 below shows enrollment trends between the 2015-16 and 2031-32 school years.

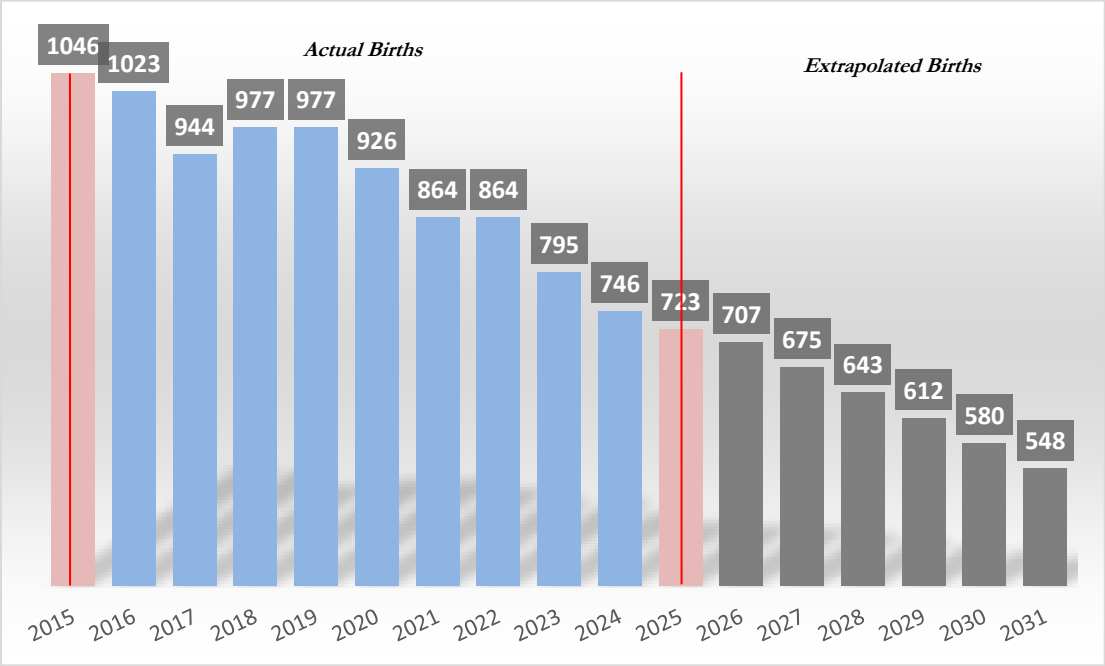

Graph 1: Total K-8 School District Enrollments and Projections

- K-8 enrollments hit a 10-year high in 2017-18.
- Between 2017 and 2021, enrollments declined by 788 students or roughly 10%.
- Covid impacts on enrollments indicate a decline of 636 students between 2019 and 2021.
- Students leaving the district during the Covid impact interval didn't return in 2021.
- If these students return, the high projection series may be the more likely projections.
- All projection series are forecasting lower enrollments in both 2025-26 and 2031-32.

Graph 2 below shows actual and extrapolated births used to project kindergarten enrollments by kindergarten cohort year. These data are district-wide totals and include only birth records occurring with district boundaries. The red bars indicate annualized birth totals based on portions of calendar year totals adjusted for an entire year of births. The blue bars indicate actual data totals. The darker grey bars indicate extrapolated births.

Graph 2: Actual and Extrapolated District Birth Trends

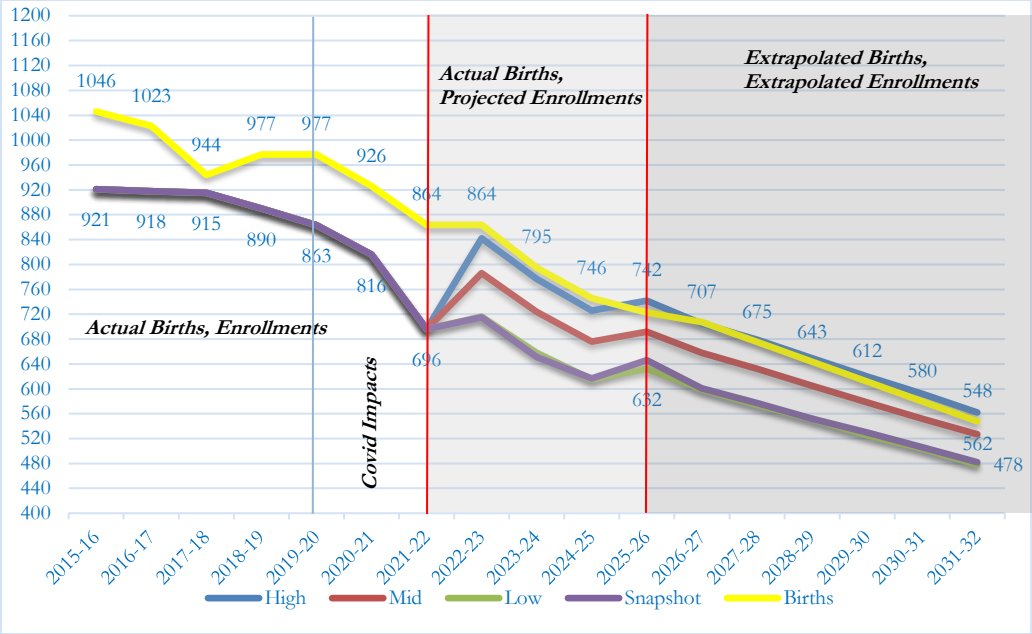

- District births have fallen steadily since 2010 which represents the 2015 kindergarten cohort.
- Births were off by 25% between the 2019 and 2025 kindergarten cohort years.
- Extrapolated birth trends place the number of births for the 2031 kindergarten cohort at 548.
- If births do not decline at the current rate, then kindergarten enrollments will be higher than projected.

Graph 3 below shows the relationship between births and kindergarten enrollments historically and in the two projection windows. As in the previous graph, births are counted by academic year and adjusted for school years of kindergarten eligibility. The yellow line shows the data points for the birth series between the 2015-16 and 2025-26 school years and the actual trend in district births. The extension of the yellow line beyond 2025-26 shows the results of extrapolating actual births out to 2031-32.

The position of the lines in this and other graphs showing kindergarten cohort births and actual and projected kindergarten enrollments is important. The birth trendline above kindergarten enrollments indicates an historical trend of birth cohorts larger than actual kindergarten enrollments. In Table 14 (Appendix, Tables and Graphs), the historical birth to kindergarten cohort survival ratios range from .81 to .92 or roughly 81% to 92% of the numbers of children eligible to attend kindergarten actually attend based on births alone. A similar trend appears in Graphs 18 (Dewey), 22 (Lincoln), and 26 (Oakton) (Appendix, Tables and Graphs). Where kindergarten enrollments are above the birth trendline, the difference may be explained by households moving in with preschool-age children. This pattern appears in Graphs 24 (Lincolnwood), 28 (Orrington), 32 (Washington), and 36 (Willard Island) (Appendix, Tables and Graphs).

Graph 3: Births and Kindergarten District Enrollments and Projections

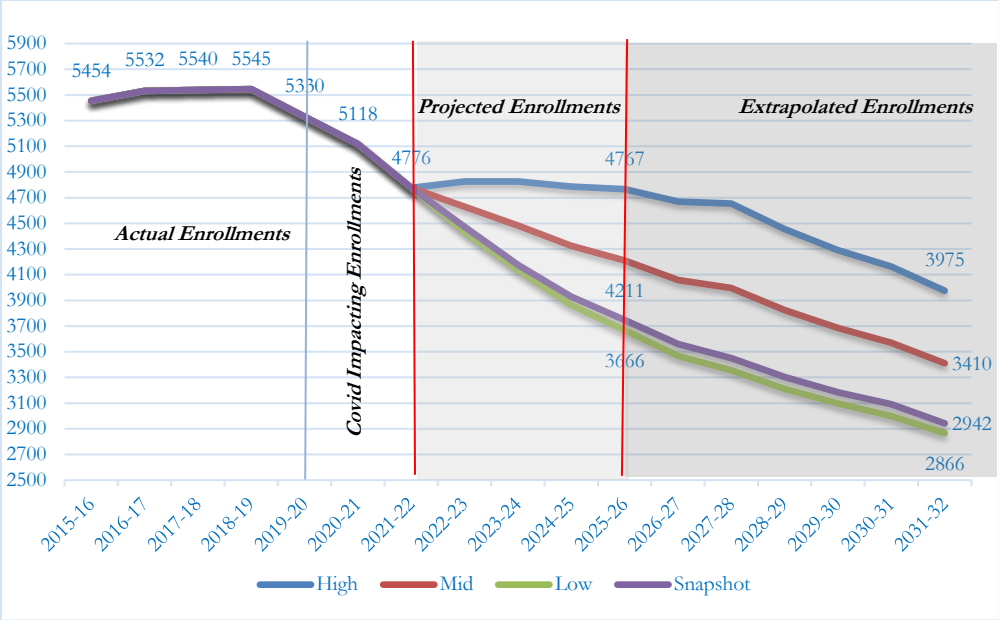

- The birth trend line for the district appears above actual kindergarten enrollments indicating less than a 100% capture rate of births to kindergarten enrollments.
- CSRs below 1.000 (in Table 14, B-K) indicate a high capture rate of cohort-adjusted births attending district kindergarten programs.
- It is significant that succeeding class sizes with CSRs below 1.000 between K-1 (grade) indicate even smaller class sizes in first grade. Typically, it would be expected to see CSRs in the K-1 category to be above 1.000.
- Births and kindergarten enrollments during the Covid impact years show a greater decline in kindergarten enrollments compared to births which may later impact enrollments in the elementary grades.
- The high projection series projects kindergarten enrollments at the same levels of extrapolated births through 2031-32.
- The mid projection series appears to continue the trend line from 2020-21 through 2025-26 and projects the difference between births and kindergarten enrollments narrowing where kindergarten class sizes are almost entirely explained by district births.

Table 13 (Appendix, Tables and Graphs) provide total birth counts and counts by attendance area for the 2015 through 2025 school years. Birth data counts are included in Tables 15 through 25

(Appendix, Tables and Graphs) which provide enrollments based on actual births, actual enrollments, and projections resulting from extrapolated births. Maps 34 through 44 (Appendix, Maps) show the concentrations of births in the district with attendance and sub area overlays. Its noteworthy that the Lincoln, lower southeast corner of Oakton, Dewey, and the Willard Island attendance areas appear higher in birth concentrations in more kindergarten cohort years over the 10-year period.

Graph 4 shows the enrollment projection trend lines of K-5 district enrollments.

Graph 4: Total K-5 Resident District Enrollments and Projections

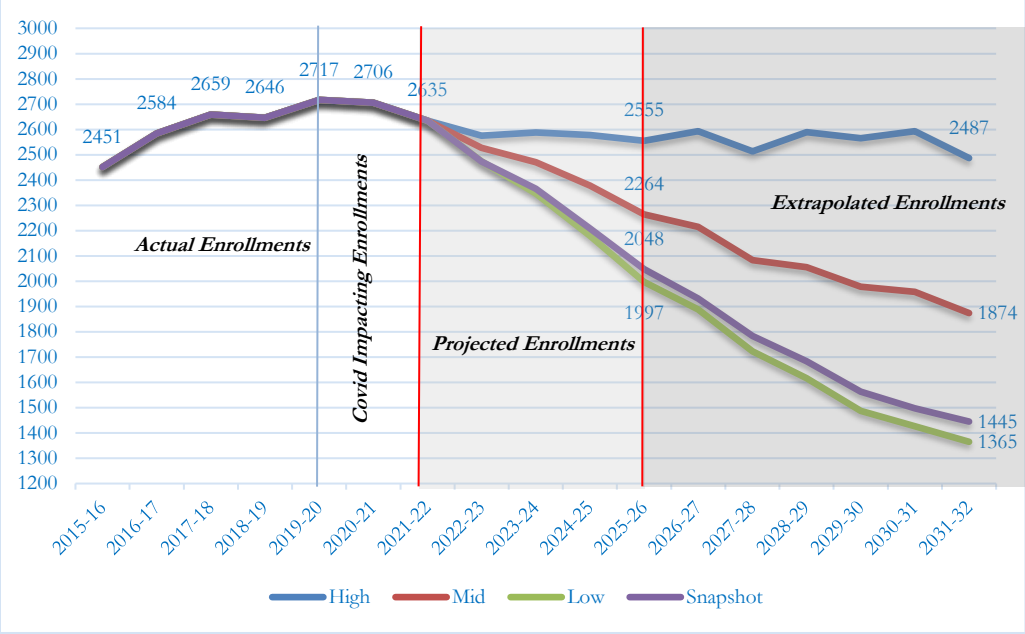

- K-5 district enrollments climbed to a high of 5,540 students in the 2017-18 school year.
- Since 2018-19, K-5 enrollments declined with a sharper rate of decline occurring during the Covid impact years (with enrollments off by more than 10%).
- The mid projection series extends the rate of decline to 4,211 students in 2025-26 (or more than 12%) and 3,410 students in 2031-32.

There are several tables in the Appendix which support this graph. Table 9 (Appendix, Table and Graphs) displays Esri age estimates and projections for categories collapsed into pre-school and Kindergarten through 5th grade (ages 6 through 11). Projected percentages by age group appear in Table 10 (Appendix, Tables and Graphs) and a projected percentage change of more than 6% for persons in the 6 through 11 year age grouping between 2021 and 2026. Tables 15 through 25 (Appendix, Tables and Graphs) provide separate total breakdowns for kindergarten and roll-ups for elementary school enrollments.

Graph 5 (next page) shows trends in district middle school enrollments and the four projection series. Actual enrollments have increased over the first 5 years of the series. Since 2020-21 and the midpoint of the Covid impact timeframe, middle school enrollments began to decline. Three of the four projection series are forecasting continuing declines in middle school enrollments. The mid projection series is expected declines of more than 14% between 2021-22 and 2025-26. This rate of decline is above the projected decline in age-specific data provided by Esri where the decline in the numbers of middle-school ages is a little more than 11%. The snapshot projection series show the impact of the Covid-period enrollments on middle-school projections. The high projection series

takes out much of the expected decline due to Covid impacts in middle school enrollments and projects little change in total enrollments between 2022-23 and 2031-32.

Graph 5: Total 6-8 Resident District Enrollments and Projections

- Middle school enrollments gradually climbed from 2015-16 to 2019-20 to reach a total of 2,717 students in 2019-20.
- The percentage increase between 2015-16 and 2019-20 was 11% with annual percentage growth of between 3% and 5% (with the exception of a slight decline in students between 2017-18 and 2018-19).
- The high projection series is expecting enrollments to remain steady through 2030-31 before declining in 2031-32.
- The mid projection series is forecasting enrollments to decline by 371 students or by 14% between 2021-22 and 2025-26.
- Both the low and snapshot projection series are expecting sharper declines in middle school students by 2025-26 and 2031-32.

Tables 9 and 10 (Appendix, Tables and Graphs) provide age specific comparisons from Esri tables and support the depiction of middle-school enrollment projections in Graph 5. Tables 15 through 25 (Appendix, Tables and Graphs) provide grade-specific actual and projected enrollments for grades 6 through 8 and middle school roll-ups of totals by attendance areas. Tables 26 through 28 (Appendix, Tables and Graphs) provide attendance area resident enrollments and projections for the three middle school areas. Graphs 12 through 14 (Appendix, Tables and Graphs) show grade-specific enrollment, projected enrollments, and extrapolated enrollments for grade 6-8.

Summary

To support the MFP, data from an independent vendor (Esri) was acquired, presented, and analyzed with a focus on population, housing, age composition, and race identification of characteristics estimated for 2021 and projected 2026. These data support the observation that the district is aging with the implication that there will be smaller class sizes in the near future.

A base map was created, verified, and used to identify the locations of changes in the district in demographic and housing variables from Esri, to geocode student and birth records for enrollment projections, and to illustrate the use of race and magnet school enrollments from the district's student information system that is associated with student residence through the geocoding process. All student records from an extract of student records at the end of August 2021 was used to develop student projections with geocoded live birth records and tabulated by residence of the mother. The unmatched results of the geocoding of student and birth records were manually reviewed. Records found within the district were added to grade and cohort or class totals.

The take-aways from the Esri data tabulated by block groups intersecting district boundaries include the following.

- The district population appears to be aging with losses projected for persons of elementary and middle school age, in the household and family formation ages of 30-39, and increases in the 65 year and over age groups.
- Total population and housing will not change by significant margins over the next 5 years. Increases in the 20-29, 40-44, and 65 and over age group will hold population totals at or above the current levels.
- Renter-occupied housing in the district will decline with owner-occupied housing rates up slightly between 2021 and 2026.
- Median and per capita household income is expected to increase significantly across the district.
- Diversity in the district will continue to increase with larger proportional increases in the black population.
- Racial concentration of the black population will continue to exist in the central corridor of the district and in the southern block groups of the Oakton attendance area; although block groups east and west of these block groups will experience an increase in black proportional representation.
- The black population will increase by double-digit margins, although the black population will remain under 25% of the total district population.
- Other racial group identification will continue to expand through the district, although other racial identification will decline district-wide.

Projected enrollment for the district is showing decreasing enrollments between 2021 and 2025 which is consistent with the Esri age estimates and projections. Births, student enrollments, and projections are pointing to the following changes.

- Births counts declined by more than 30% over the last decade
- Kindergarten enrollments declined by about 26% between 2015 through 2021.

- Elementary enrollments will probably continue to decline due to the impact of larger enrollment declines during the Covid years.
- Elementary enrollments are projected to bounce back to 2020 enrollment levels in 2022 in the high and mid projection scenarios. Both of these enrollment projection series take out the sharper decline in enrollments between 2020 and 2021 or the Covid enrollment impact school years.
- Probable declines in extrapolated elementary enrollments are expected beyond 2025-26
- Probable middle school declining enrollments are expected, beginning with the 2022-23 school year and extending through the extrapolated enrollment projection interval.
- Declining student enrollments are supported by the Esri age-specific estimates and projections for the elementary and middle school-aged population in district block groups between 2021 and 2026 with the caveat that Esri age-projections are expecting sharper declines in the middle-school aged population.

Better Planning Practices and Recommendations

The data assembled to support the MFP represent a snapshot in time of district demographic, housing, socioeconomic, and enrollment trends. This snapshot has been impacted significantly (statistically) by the Covid pandemic, particularly during the school years 2018 through 2021. A recovery from the Covid pandemic may change the direction of age-group population trends, housing turnover, and household in-migration among householders (particularly, in the 30-39 age group). This may change the direction of births in the district and the size of kindergarten classes or cohorts in the future.

Accordingly, the following is suggested in an ongoing assessment of district population, housing, and enrollment trends.

- The district investment in demographic and housing data should be maintained with periodic updates. The availability of Esri estimates for 2022 and projections for 2027 should be acquired to update the general demographic trends noted in the study. These data will include the results of the last decennial census (in 2020) and may reflect a further update in demographic and housing trends.
- The district should maintain the birth data series with geocoding of birth records for 2020 which will be available in the late spring or early summer of 2022. These data may be used to finalize the kindergarten cohort or class totals for 2025 and provide a tentative projection of the birth cohort for 2026 kindergarten enrollments in the district's projection model.
- The district should update the actual enrollments for the 2022 school year. These data may change the trajectory of enrollments in the 4 projection series.
- With the district's subscription to Cook County Assessor data, the data set for the district may be completed in the near future which will add to the data provided by Esri. These data should be used to identify key demographic and housing trends in student housing characteristics.

Original Letter of Agreement

Charles Kofron, Ph.D. LLC_____

Evanston/Skokie School District 65
Letter of Agreement

August 2, 2021

Mr. Brian Kronewitter, AIA, DBIA
Executive Vice President
Cordogan Clark & Associates
716 N. Wells St.
Chicago, IL 60654

Dear Mr. Kronewitter,

Thank you for giving me (Charles Kofron dba Charles Kofron, Ph.D. LLC) the opportunity of participating with Cordogan Clark & Associates (CCA) in the development of a master facility plan for the Evanston/Skokie School District 65 (District). This is the letter of agreement (LOA) that authorizes my participation in this study.

This LOA covers items 1.d and 1.f of the District's RFQ and the not-to-exceed cost of $17,500 plus travel and other authorized expenses.

In response to item 1.d. of the District's RFQ, for the sum of $8,000, I will do the following.

1. Acquire demographic overview and age by sex estimate (2020) and projection (2025) projection tables from Environmental Systems Research Institute (Esri) for block groups intersected and targeted for analysis by block group. Esri data include the following.

    a 2020/2025 Demographic Overview
    b 2020 Population by Single Year by Sex
    c 2025 Population by Single Year by Sex
    d 2020 Population by Age by Sex by Race (5-year age groupings)
    e 2025 Population by Age by Sex by Race (5-year age groupings)

2. Assemble these data to thematically map population, housing, household, and family changes by block group for 2020 and 2025.

3. Develop maps and tables showing estimates and projected changes in demographic and housing characteristics by block group which will include attendance area overlays.

4. Download Cook County Assessor and parcel data and join Assessor to data to parcel data.

8104 Kingsbury Boulevard ***Clayton, Missouri 63105*** ***charleskofron.com***

5. Acquire existing attendance area boundaries from the District and digitize these boundaries using the Cook County parcel data. These attendance areas will be drawn from the 10 elementary attendance areas (Dawes, Dewey, Kingsley, Lincoln, Lincolnwood, Oakton, Orrington, Walker, Washington, Willard). As feeder areas to the three middle schools enrollments and projections will be summed for grades 6-8 for Chute, Nichols, and Haven middle schools. These 10 attendance areas (assuming no splits between elementary and middle school areas) with parcels, street centerlines and address points will constitute the District's base map. In addition, the District's subareas of current attendance areas will be digitized and used in spatial data overlays to preserve student and birth counts in the event that the District decides to change attendance area boundaries.

6. Develop counts of District residential housing by attendance area and subarea. Using geocoded student records from 2020, tabulate and compare student housing data by attendance area and subarea.

7. Develop maps showing changes in District housing using land use, other assessment data, and student residential locations with existing District attendance areas and subareas.

In response to item 1.f. of the District's RFQ and for the additional sum of $9,500, I will do the following.

8. Acquire Cook County address point and street centerline data for geocoding (address matching) student and birth records.

9. Request from the District and process student record addresses (K-8) for the last 10 school years and geocode these to the District's base map. Develop resident counts by grade, school year, subarea, and attendance area. Assemble these counts by class or cohort.

10. Request from the Illinois Department of Public Health (IDPH) and process birth data addresses over a 10-year period, assign births to Kindergarten cohorts, and overlay District attendance area and subarea boundaries for the purpose of generating Kindergarten cohort survival ratios and enrollment projections.

11. Develop and build out a cohort enrollment projection model by attendance area for grades K-8 using geocoded resident student and birth locations. The projection model will include at least 3 series of projections (high, mid, and low) using calculated cohort survival ratios. These projections will be made available to CCA for completing the master facility plan,

12. Summarize the findings of the study with maps, tables, charts and/or other graphics in a summary report.

Roles and Responsibilities

Whereas this study is based on District and US Census Bureau geographies or units for tabulating population, housing, student, and birth counts; and

Whereas this study requires District student address record counts to prepare enrollment projections for existing attendance areas and possible revised or new attendance areas; and

Whereas the District is the steward and source for student address records; and

Whereas this study uses geographic information system technology to match and count address records by parcel, subarea, and attendance area; and

Whereas not all student and birth records are expected to match Cook County address points and street centerline data and the District is required to review these records to increase the accuracy of enrollment projections; and

Whereas this study makes use of confidential information protected by state and federal law; and

Whereas the District is the steward and source of geographic data expertise for addresses, subareas, and attendance areas;

Then the District's roles and responsibilities in and for the demographic study for the master facility plan requires the following.

1) Provide a point of contact (POC) for the geographic and student address data necessary for conducting the demographic study; and
2) Oversee, define, and verify all maps and geographic subareas that constitute the base map for this study and that are also created by Charles Kofron; and
3) Abide by confidentiality agreements with the IDPH and CCA; and
4) Produce hardcopies (if necessary) of maps and tables and reference materials that are provided by Charles Kofron in electronic format (e.g., pdf, Excel spreadsheets, Word documents) for reviewing unmatched student and birth address counts; and
5) Provide 10 years of student address records in a machine-readable format (Excel file) from a consistent point in time in the school year (e.g., September 30) for matching address records to the District's base map; and
6) Review and manually match student address that are not matched by Charles Kofron with the use of a geographic information system and manually identify the location of unmatched addresses in subareas of the District's base map; and
7) Return counts of student addresses by subarea and grade that are manually matched by the District to Charles Kofron for inclusion in the enrollment projection model; and
8) Enter into a Data User Agreement with the IDPH for requesting, accessing, and reviewing birth record addresses; and
9) Review and manually match birth addresses that are not matched by Charles Kofron and count the number of addresses found within the District by Kindergarten cohort year and subareas in the District. ****Special Note: the District will be required to do this work at and under the general supervision of the Illinois Department of Public Health (IDPH) at IDPH facilities. The District will not be allowed to leave IDPH with birth record addresses, but only counts of birth records by subarea and Kindergarten cohort year that fail to match the District's base map.****
10) Return counts of birth addresses by subarea and assigned Kindergarten cohort years that are manually matched by the District to Charles Kofron for inclusion in the enrollment projections model; and

11) Define the strategy for selecting and aggregating block group geography for defining school and community areas.

Whereas Charles Kofron is directing the demographic study and processing demographic, housing, and address data for the master facility plan on behalf of CCA for the District; and

Whereas Charles Kofron is licensed to use geographic information system software and data for this study; and

Whereas Charles Kofron has a working knowledge of geographic information system software to create, process, and analyze spatial and tabular data; and

Whereas Charles Kofron has a working and trusted relationship with the IDPH for processing birth data for District planning; and

Whereas Charles Kofron has demographic domain and data processing knowledge to produce counts and enrollment projections by attendance areas; and

Whereas Charles Kofron has the ability to process and analyze demographic estimates and projections and housing counts and characteristics by census block and block group;

Then Charles Kofron's roles and responsibilities in and for the demographic study of the master facility plan requires the following.

1) Work with CCA to coordinate the explanation and work requirements of the demographic, housing and enrollment projections used in the study (see CCA items below) with the District; and
2) Obtain, process, analyze, and produce maps, tables, and graphics of demographic and housing data from secondary sources identified as Environmental Systems Research Institute (Esri), the Cook County's Assessor's Office, the Cook County Open Data Portal, and the District; and
3) Digitize (digitally encode) District attendance area and subarea boundaries and produce maps for review and boundary verification; and
4) Revise and finalize map compilations based on District reviews; and
5) Provide finalized map compilations to the District and CCA in the form of electronic (pdf) files for reference; and
6) Geocode student address records provided by the District and return to the District for review, in the form of an Excel spreadsheet, and manual assignment to District subareas addresses that can't be located within District attendance areas and subareas using geographic information system technology; and
7) Obtain and assign 10 years of birth address records to Kindergarten cohort years that have been requested by the District; and
8) Geocode birth address records extracted by the IDPH and under the supervision and oversight of the IDPH as these data become available; and
9) Return to the IDPH birth records that cannot be matched to the District's base map and require District review in the form of an Excel spreadsheet for the assignment of subareas to these records; and

10) Assure that the District has access to unmatched birth addresses for review at IDPH facilities; and
11) Provide the District with maps and other resources, including training, that may be used to manually match student and birth records that can't be matched by geographic information systems technology; and
12) Build a cohort enrollment projections model using geocoded and reviewed student and birth address counts; and
13) Analyze and summarize enrollment projections by subarea and attendance areas and provide these data to CCA and the District for the master facility plan; and
14) Summarize the demographic, housing, and enrollment projections data in a report with all graphics, tables, and maps and provide this report to CCA; and
15) Provide data and yet to be defined support for other District initiatives including redistricting.

Whereas CCA is the lead contractor for the District's master facility plan; and

Whereas CCA is providing general oversight for developing the master facility plan; and

Whereas CCA requires and will be using demographic, housing, and enrollment projections by Charles Kofron for determining facility plans and modifications;

Then CCA roles and responsibilities in the demographic study include the following:

1) Enter into the master facility plan contract or letter of agreement (Contract) with the District for Charles Kofron to conduct the demographic, housing, and enrollment projection study; and
2) Authorize the work and billing arrangement of Charles Kofron for the District as explained in the General Understanding section below and by signing this LOA; and
3) Coordinate and communicate to the District with the support of Charles Kofron explanations of District roles and responsibilities as required to facilitate data acquisition, analysis, and master facility plan development; and
4) Coordinate and communicate with the support of Charles Kofron explanations of demographic, housing, and enrollment projections and the use of these data in the development of the master facility plan; and
5) Provide assurances in the Contract with the District for the indemnification of the work of Charles Kofron as a subcontractor; and
6) Abide by confidentiality agreements with the District concerning student record counts; and
7) Provide the means of accepting invoicing and paying for work started and completed by Charles Kofron as itemized above; and
8) Authorize additional work with the District by Charles Kofron that is agreed to by the District and Charles Kofron that is not included in the itemization of work above.

General Understandings

CCA understands that Charles Kofron is not responsible for the content or the accuracy of the estimates and projections acquired from Esri. These data have been developed by Esri using proprietary algorithms from a variety of other (secondary) data sources that are used to make demographic and housing estimates and projections by block group for the entire country.

CCA understands that Charles Kofron is not responsible for the accuracy of parcel and assessment data acquired from Cook County. These data reflect end-of-year (EOY) assessments and the characteristics of housing units at the time these data are finalized.

CCA understands that a typical billing arrangement with Charles Kofron is for half of the amount to be paid within 30 days of the beginning of the study (or the signing of a letter of agreement). The remaining half of the amount will be due within 30 days after the final report is delivered. Agreed upon travel and other costs not included in this LOA will be invoiced separately and paid within 30 days.

CCA understands that will be no change to this LOA unless both parties agree to the change in writing. However, CCA in coordination with the District may wish to include additional options beyond this scope of work. Additional services beyond this agreement will require the written consent of Charles Kofron and CCA Additional hours will be billed at the rate of $125 per hour.

CCA understands and accepts the condition that Charles Kofron, Ph.D. has no control over the scheduling or the releasing of data by local and state government or private-sector data providers. Charles Kofron will work with the District and CCA to obtain the timely release of all data required by this study; however, specific dates for the release of these data cannot be anticipated or guaranteed.

Charles Kofron and CCA will comply with all requirements for maintaining the confidentiality of data, nondisclosure, and/or specific use. Data provided under these terms will only be used for the intended purposes of this study.

Charles Kofron understands that the role of Charles Kofron, Ph.D. LLC will be as a subcontractor to CCA. All invoicing for services will be made to and paid by CCA.

If these terms are agreeable, please sign and return a copy of this LOA.

Sincerely,

Charles Kofron

Student Data Privacy Agreement

STUDENT DATA PRIVACY AGREEMENT

This AGREEMENT is made and entered into by and between Evanston Skokie School District 65, Cook County, Illinois (the "District") and Charles Kofron, Ph.D. LLC ("Contractor")(collectively referred to as the "Parties").

WITNESSETH:

WHEREAS, Contractor has been engaged by Cordogan Clark & Associates, Inc., the District's architect,to conduct an enrollment study of the District ("Study"); and

WHEREAS, for Contractor to complete the Study, it requires certain information about the District's students;

WHEREAS, the District is willing to provide the information that Contractor requires, onthe terms and conditions contained herein.

NOW, THEREFORE, in consideration of the mutual covenants and agreements herein contained, the District and Contractor agree as follows:

1. **TERM AND TERMINATION:** The term of this Agreement shall commence on the date thatthe last party signs below and shall continue in effect until the Study is complete. The Districtmay terminate this Agreement, without cause, upon seven (7) days written notice to Contractor.

2. **RECORDS AND CONFIDENTIALITY:** The Contractor shall have access to student recordsof the District only to the extent necessary to complete the Study. The Contractor agrees thatany information it receives with respect to individual District students shall remain the propertyof the District and shall be treated and maintained by the Contractor as confidential informationand used only for the identified purposes in conjunction with the Study. Student record information shall not be disclosed by the Contractor to third parties for any reason other than to law enforcement or medical personnel in the event of an emergency or as otherwise may berequired by law, and will not be used for the Contractor's own personal or business purposes outside the completion of the Study. If there is a breach of such information (i.e. disclosure toa third party by Contractor), the Contractor shall, within two (2) calendar days of knowledge of the incident, inform the District of the breach and the data affected. Contractor further agreesto comply with all state and federal laws, including, but not limited to, the *Illinois School StudentRecords Act*, the Illinois *Mental Health Act and Developmental Disabilities Confidentiality Act*, the federal *Family Educational Rights and Privacy Act*, and all rules and regulations governingthe release of student records. Contractor also shall abide by all other records confidentiality obligations of the District and all District policies and procedures applicable to same.

   Upon termination of the Agreement with or without cause, including, but not limited to, termination under the provisions of this Agreement or expiration of its term, any student recordinformation in possession of Contractor shall be returned to the District and all copies of suchinformation in all formats destroyed in accordance with all applicable laws and U.S. Department of Education and Privacy Technical Assistance Center guidelines within 30 days

of termination unless the Agreement provides for Contractor to maintain the records for a longer period of time.

3. **COMPLIANCE WITH LAWS**: Contractor shall comply with all applicable laws, ordinances, rules, regulations and codes, including but not limited to (if and to the extent applicable) the *Illinois Human Rights Act*, 775 ILCS 5/1-101 *et seq.* and the provision of sexual harassment policies and procedures pursuant to Section 2-105 of that Act, including the regulations promulgated thereunder; the Equal Employment Opportunity Clause at Title 44, Part 750, of the Illinois Administrative Code (*see* 44 Ill. Admin. Code 750.20), which is fully incorporated herein; federal Equal Employment Opportunity Laws, including, but not limited to, the *Americans With Disabilities Act*, 42 U.S.C. Section 12101 *et seq.*, and rules and regulations promulgated thereunder; certifications concerning not being barred from bidding and complying with Illinois Use Tax requirements under the Illinois *School Code* (105 ILCS 5/10-20.21); and the Illinois *Drug Free Workplace Act* (30 ILCS 580/1 *et seq.*).

4. **INDEMNIFICATION:** Contractor will indemnify, defend, and hold harmless the Board of Education of Evanston Skokie School District 65, its individual Board members, the District, and its employees, and agents ("Indemnitees") from and against all liabilities, losses, damages, costs and expenses, including attorney's fees, to the extent arising from any act or omission of Contractor in connection with this Agreement. The foregoing indemnification shall survive the expiration or termination of this Agreement. Additionally, the Contractor waives any and all rights against the District that it may have under any Worker's Compensation Act or interpretations of such laws.

5. **INSURANCE:** Contractor shall obtain and maintain in effect during the term of the Agreement, at its own expense, general liability insurance coverage and provide the District with a certificate of insurance verifying such coverage in an amount of no less than $1,000,000 per occurrence and in the aggregate. Contractor shall also maintain cyber liability insurance in an amount of no less than $1,000,000. Contractor shall name the Indemnitees as additional insureds on all insurance required hereunder. All insurance of Contractor shall be primary and noncontributory. Contractor waives any right of subrogation it and its insurers may have against the additional insureds.

6. **MISCELLANEOUS PROVISIONS:**

    a. **WAIVER:** The failure of either Party to enforce any provisions of this Agreement shall not be deemed a waiver or limitation of that Party's right to subsequently enforceand compel strict compliance with every provision of this Agreement.

    b. **ENTIRE AGREEMENT:** This Agreement constitutes the entire agreement between the Parties and supersedes any prior understanding or representation of any kind preceding the date of this Agreement. There are no other promises, conditions, understandings or other agreements, whether oral or written, relating to the subject matter of this Agreement. This Agreement may be modified in writing, which amendment must be signed by both the District and Contractor to be effective.

c. **GOVERNING LAW:** This Agreement shall be governed by and construed in accordance with the laws of the State of Illinois. The appropriate venue for any litigation arising out of this Agreement shall be Illinois Circuit Court or a federal district court in Illinois.

d. **SUBCONTRACTING AND ASSIGNMENT:** Contractor shall not have the right to subcontract, delegate, assign or otherwise transfer his/her right or obligations under this Agreement without the prior written consent of the District, which may be withheld in its sole discretion. Subject to the foregoing, this Agreement shall inure to the benefit of and be binding upon the Parties and their respective successors and permitted assigns.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be executed on the date(s) written below.

DATA USE MEMORANDUM OF UNDERSTANDING
BETWEEN
THE ILLINOIS DEPARTMENT OF PUBLIC HEALTH
AND
EVANSTON/SKOKIE SCHOOL DISTRICT 65
Single Use
MOU Number 21S002

The Illinois Department of Public Health (DPH) and Evanston/Skokie School District 65 (School District) hereby enter into this Data Use Memorandum of Understanding (Agreement) in connection with the request received to process data to estimate the future needs of the School District. DPH and School District are collectively referred to herein as "Parties" or individually as a "Party." To fulfill the terms of this Agreement the Parties agree to the following:

ARTICLE I
INTRODUCTION

1.1 Background. Hospitals, funeral homes, and coroners submit vital records data to DPH pursuant to the Illinois Vital Records Act (410 ILCS 535) and the Illinois Vital Records Code (77 Ill. Adm. Code 500). Section 1 of the Act defines "vital records" to include records of births, deaths, fetal deaths, marriages, dissolution of marriages, and related data. Sections 500.20 and 500.70 of the Illinois Vital Records Code authorizes DPH to release limited vital records data to a bona fide researcher who has entered into a data use agreement covering access, usage, distribution and confidentiality of the data. School District requests use of the data for the purposes set forth in Section 2.1 below.

1.2 Purpose. Upon the execution a data use agreement, confidential Illinois vital records data may be released by the State Registrar of Vital Records when deemed essential for bona fide research purposes which are not for private gain (410 ILCS 535/4). The State Registrar of Vital Records may furnish, upon terms and conditions he may prescribe under the Act, when deemed in the public interest and not for purposes of commercial solicitation or private gain, copies of vital records or data from these records to public agencies administering health welfare, safety, law enforcement, or public assistance programs, 77 Ill. Adm. Code 500.20(a). Data will be provided to School District for the purposes outlined in Article II of this Agreement, which sets forth all of the School District's responsibilities and limitations related to the Data. This Agreement applies to all Data provided, in full or in part, and any and all summaries or aggregations of Data that may be derived from original Data or any subset thereof.

Evanston/Skokie School District 65 (School District) has submitted a request for birth data to plan for future needs regarding enrollment, class size, and the number of classrooms and schools. The data on future class size is needed for the School District to plan for programs, including the provision of public health screening and assessments, and may be used for the planning of public health services to students. The School District is involved with a cooperative agreement with Charles Kofron, Ph.D., (Data User), as a contractor/consultant for the purposes of geocoding.

ARTICLE II
DATA TO BE PROVIDED

2.1 Project. The School District requests the use of birth data to assist the Data User in estimating the future needs regarding enrollment, classroom size, and the number of classrooms and schools. The Data User will use Data from the previous 10 calendar years available to geocode the information. Specific rules regarding the use of the Data by the Data User can be found in Attachment A, which is incorporated into this Agreement.

2.2 Data Elements. The data elements to be provided can be found in Attachment B, which is attached and hereby incorporated into this Agreement.

The data elements to be provided are address, city, zip code, latitude and longitude, race, ethnicity, month and year of birth, and sex.

a. The data will be provided for the following zip code(s): 60201, 60202, 60203, 60091, 60645, 60626 and 60076.

b. Data to be supplied are for the most recent 10 calendar years available and additional calendar years that will become available during the term of this agreement. Data User will generate the counts of births for each year of data for the School District.

c. In the event that Data User provides written notification the Department that Data User requires additional data elements, the Department shall review the request. The request shall be submitted pursuant to Article VI (6.1) and Article VII (7.2).

2.3 Use of Data. Data User and the School District are granted limited use of the data (Data) for the purposes as indicated in the data request form and related correspondence, which are hereby attached and incorporated. Data User and the School District shall use this Data for the future classroom size needs to plan for programs, including the provision of public health screening and assessments, and may be used for planning of public health services to students. Use of the Data for any purpose other than the purpose expressly set forth by this Agreement requires (i) Data User and the School District to submit a separate data request and; (ii) the Parties to execute a separate data use agreement.

ARTICLE III
DEFINITIONS

3.1 Data. Data means the data requested from DPH in the data request form and related correspondence and provided to Data User and School District for the purpose(s) set forth in this Agreement.

3.2 School District. School District means the organization entering into this Agreement as a Party.

3.3 Original Data. Original Data means the original, patient-level Data received from DPH, or any patient-level data created from the original Data. Any aggregation, report, or analysis containing a cell size less than 10 and/or rate with numerator less than 10 is considered patient-level data in that it may represent a high probability of patient identification. Original Data does not include any resulting product created by School District using wholly or in part the Original Data, so long as the resulting product does not reveal a cell size less than 10 and/or rate with numerator less than 10, due to the statistically high probability of patient identification.

3.4 Data User. Data User means the principal user of Data, and is an individual working for, or on behalf of, the School District in furtherance of the Project goals as set forth in Section 2.1. Data User has primary oversight of Data use by individuals working for, or on behalf of, the School District in furtherance of the Project goals

and will ensure that individuals accessing Data in furtherance of the Project goals act in compliance with this Agreement.

ARTICLE IV
USE OF DATA, TERMS AND CONDITIONS

4.1 Confidentiality. Data User and School District shall maintain the confidentiality of the data.

4.1.1 DPH shall retain exclusive ownership of all Data provided under this agreement. This Agreement is not intended to convey any ownership or other interest other than a limited right to use DPH data for the purposes expressly stated herein.

4.1.2 Data User and the School District understand and agree that any and all Data provided by DPH which may lead to the identification of any patient, physician, other person, or reporting facility is strictly privileged and confidential. Data User and the School District agree to keep all such Data strictly confidential at all times.

4.1.3 Data User and the School District will report Data in such a way as to maintain the confidentiality of individual records. Data User and the School District will not report Data in a way that will enable identification of any individual patient or individual facility. Therefore, Data User and the School District agree not to publish, disseminate, or otherwise release any information acquired or produced pursuant to this Agreement with cell size less than 10 and/or rate with numerator less than 10, due to the statistically high probability of patient or facility identification. Data User and the School District further agree not to publish, disseminate, or otherwise release any raw Data provided by DPH pursuant to this Agreement.

4.1.4 School District, on behalf of itself and Data User, agrees that it will not use any means or methods to interpret, analyze, or manipulate Data in an attempt to identify any individual patients using either the Data provided pursuant to this Agreement, or any other available data sets. School District will not attempt to link, or permit others to attempt to link, the health care records of persons in this data set with personally identifiable records from any other source.

4.1.5 The School District shall not publish, share, loan, disseminate, copy, reproduce, or otherwise release any information acquired or produced pursuant to this Agreement without adhering to the procedures outlined in this Agreement, including obtaining the Department's prior written approval.

4.1.6 School District shall notify DPH in writing within one (1) business day following its receipt a Freedom of Information Act (FOIA) request, subpoena or court order related to the Data provided pursuant to this Agreement. DPH shall determine whether the information sought contains identifiable or confidential information, and whether it shall be released.

4.1.7 Data User and the School District agree that, while conducting approved activities under the terms of this Agreement, if Data User or the School District receives a request for the release of an individual's identity or identifying information, the information **will not** be released, and DPH will be provided with written notification of the request within one (1) business day.

4.1.8 Data User and the School District will not, under any circumstances, permit the inspection or copying of the Data by any person not (i) directly involved in the Data use; and (ii) previously disclosed to DPH.

4.1.9 Data User and the School District will not allow third-party access to any portion of the Data without the prior, express written consent of DPH.

4.1.10 School District shall notify DPH in writing within twenty-four (24) hours of the time at which any violation of the terms, including but not limited to a breach in safeguards, security, or confidentiality, of this Agreement becomes known or suspected.

4.1.11 All obligations regarding confidentiality of Data shall survive the termination of this Agreement.

4.1.12 All obligations regarding retention of Data shall survive the termination of this Agreement.

4.2 Resale or Analysis of Data.

4.2.1 Data User and School District agree that the terms of Data usage are strictly conditioned upon an agreement and acknowledgement that the Data shall not be sold, assigned, shared, or transferred in any manner, and that any actual or attempted sale, assignment, or transfer, without the prior express written permission of DPH's Division of Vital Records (DVR), shall subject the Data User and/or the School District to all available remedies given to DPH and DVR under State and federal laws, rules, and regulations. Unless the agreed upon purpose of this Agreement is the resale of data, Data User and School District are prohibited from releasing, redistributing, or reselling DPH's original, patient-level data in any form, including linked data sets.

4.2.2 Unless the agreed upon purpose of this Agreement is the resale of data, Data User and the School District may not share, resell, redistribute, or make multiple uses of the Data and/or any output based on the Data including, analyses, studies, risk-adjusted or actual subsets or aggregations.

4.2.3 If the School District elects to use the Data and/or analyses or aggregation from the Data beyond the original termination date of this Agreement, such use shall be governed by the requirements of Sections 4.5.5 and 4.5.6 of this Agreement.

4.3 Contractors and Subcontractors.

4.3.1 Data User and School District shall not provide the Data to a subcontractor without DVR's prior express written permission. Any contractors or subcontractors given access to the Data to carry out manipulation and/or analyses on behalf of the School District shall signify their understanding of the need to maintain the confidentiality of such Data by signing a data use agreement with School District. School District shall provide DPH with a copy of the current language contained in such data use agreements prior to sharing and Data with any contractor(s) and/or subcontractor(s). DPH shall have the right to approve or reject any proposed contractor(s) and subcontractor(s).

4.3.2 All Data supplied to a contractor or subcontractor for use in a specific project must be returned to the School District or permanently destroyed upon completion of the project and purged from their system.

4.3.3 If Data are linked to other data sets and if a contractor or subcontractor performs the linking, the original Data shall be returned to the School District or destroyed following the linking of these Data.

4.4 Additional Assurances. School District provides the following assurances with respect to the Data obtained under the terms and conditions of this Agreement:

4.4.1 Individuals, including Data User, acting under School District's supervision for the purposes of Data manipulation, analyses or product preparation, shall complete and provide DPH with a signed Acknowledgement form (Attachment C). In the event individuals are added to the project and granted access to the Data, a signed Acknowledgement form should be submitted to DPH at the address in Section 7.9.

4.4.2 Individuals acting under the supervision of the Data User or on behalf of the School District for the purposes of using the analyses, studies, or aggregations based on the Data for marketing analysis, sales activities, or other business purposes shall use reasonable and appropriate safeguards and security measures to prevent the use or disclosure of the information for any purposes other than those permitted by this Agreement.

4.4.3 Individuals, including Data User, acting under School District's supervision, or on School District's behalf, shall use appropriate safeguards and security measures to prevent the use or disclosure of the Data for any purpose(s) other than those expressly permitted by this Agreement. School District agrees that anyone acting under School District's supervision or on School District's behalf shall have access to Data only at the level required to accomplish the work.

4.4.4 School District will make no statement nor permit others to make statements implying or suggesting that interpretations drawn are those of health care facilities that may be identified in the data, either individually or as a group, or of DPH.

4.4.5 School District agrees to store all electronic notes and Data on password protected computers at the School District, and not to remove Data or notes from School District property.

4.4.6 School District shall continuously maintain all Data provided under this Agreement in password protected and encrypted files.

4.5 Provisions of Data Release to Data User and the School District.

4.5.1 DPH will provide School District with a file containing the data elements indicated in the Data Element List, with a detailed record layout specific to the data requested.

4.5.2 Data will be released to the individual signing this Agreement as Data User, or on behalf of School District, within thirty (30) business days of both this Agreement being executed and receipt of payment, as specified in Article V.

4.5.3 Data User and the School District are granted use of the Data for the purposes stated in the data request form, set forth in Section 2.3, and pursuant to the restrictions and limitations of this Agreement and any applicable federal and State laws, rules, and regulations.

4.5.4 Except as provided in Section 4.2 above, all Original Data provided by DPH is the sole property of DPH and shall not be copied or reproduced in any manner without consent. Data User shall destroy all data and reproductions of the Data when the need for the Data has ended or the termination date of this Agreement is reached. Data User shall then return the signed Certificate of Destruction (Attachment D) to DPH signifying that the destruction was completed.

4.5.5 Data User and the School District understand that they may continue to utilize Data obtained under this Agreement or a previous agreement only if (i) the Data is being used for trending purposes; (ii) the Data will still be used for its original intended purpose(s); and (iii) Data User and the School District have a current, active agreement with DPH to use Data for the same purpose(s) as set forth in a previous agreement. Continued use of previously purchased Data for trending purposes shall not be subject to an additional fee; however, any additional Data supplied for use as set forth in this Agreement is subject to charges and administrative fees pursuant to DPH's active fee schedule.

4.5.6 If Data User and the School District intend to use previously purchased Data for any reason other than originally intended, DPH must be notified, and must issue written approval, prior to such change in use. Any change in the intended use of Data requires an amendment to the current Agreement, or the execution of a new data use agreement. The issuance of amendments and new agreements shall be at DPH's discretion.

4.5.7 Data User and School District will acknowledge the "Illinois Department of Public Health, Division of Vital Records, as a data source in any and all publications based on this data.

ARTICLE V
FEES AND PAYMENT

5.1 Fees. There will be no fees associated with this vital records Data request.

5.2 Additional Data Availability. Data available and accessible under the terms of this Agreement are limited to only the elements offered on the data element list supplied by DPH and allowed by the Illinois Vital Records Act (410 ILCS 535) and Code (77 Ill. Adm. Code 500). The elements selected may be changed by amendment to this Agreement signed by both Parties. Data User and the School District acknowledge that requesting additional data elements may result in additional fees for Data usage.

ARTICLE VI
TERM AND TERMINATION

6.1 Term. This Agreement shall commence upon final signature of the Illinois Department of Public Health Director and, unless otherwise terminated by the Parties, shall continue through **December 31, 2025** This agreement may be extended by written mutual agreement of the parties.

6.2 Termination on Notice. This Agreement may be terminated by either Party for any or no reason upon thirty (30) days' prior written notice to the other Party.

6.3 Termination for Breach. In the event Data User or School District breaches this Agreement and fails to cure such breach within ten (10) days' written notice thereof from DPH, DPH may terminate this Agreement upon written notice to the Data User/School District. Termination for breach will nullify the permissions for continued Data use as otherwise allowed by Sections 4.5.5 and 4.5.6, and Data User/School District will be required to destroy all Data provided pursuant to this Agreement within five (5) calendar days of termination.

ARTICLE VII
MISCELLANEOUS

7.1 Renewal. This Agreement may not be renewed.

7.2 Amendments. This Agreement may be modified or amended at any time during its term by mutual consent of the Parties, expressed in writing and signed by the Parties. Additional data requests will be subject to charges in accordance with the active fee schedule.

7.3 Applicable Law and Severability. This Agreement shall be governed in all respects by the laws of the State of Illinois. If any provision of this Agreement shall be held or deemed to be or shall in fact be inoperative or unenforceable as applied in any particular case in any jurisdiction or jurisdictions or in all cases because it conflicts with any other provision or provisions hereof or any constitution, statute, ordinance, rule of law or public policy, or for any reason, such circumstance shall not have the effect of rendering any other provision or provisions contained herein invalid, inoperative or unenforceable to any extent whatsoever. The invalidity of any one or more phrases, sentences, clauses, or sections contained in this Agreement shall not affect the remaining portions of this Agreement or any part thereof. In the event that this Agreement is determined to be invalid by a court of competent jurisdiction, it shall be terminated immediately. The parties expressly waive any rule of interpretation or construction that would construe any ambiguity against DPH. The exclusive venue of any action(s) filed under this Agreement shall be in the Illinois Court of Claims.

7.4 Records Retention. The Parties shall maintain for a minimum of five (5) years from the later of the date of final payment under this Agreement, or the expiration of this Agreement, adequate books, records and supporting documents. If an audit, litigation or other action involving the records is begun before the end of the five-year period, the records shall be retained until all issues arising out of the action are resolved.

7.5 No Personal Liability. No member, official, director, employee, or agent of DPH shall be individually or personally liable in connection with this Agreement.

7.6 Assignment; Binding Effect. This Agreement, or any portion thereof, shall not be assigned by any of the Parties without the prior written consent of the other Parties. This Agreement shall inure to the benefit of and shall be binding the Parties and their respective successors and permitted assigns.

7.7 Precedence. In the event there is a conflict between this Agreement and any of the exhibits hereto, this Agreement shall control. In the event there is a conflict between this Agreement and relevant statute(s) or Administrative Rule(s), the relevant statute(s) or rule(s) shall control.

7.8 Entire Agreement. This Agreement constitutes the entire agreement between the Parties and merges and supersedes all prior negotiations and understandings concerning the subject matter of this Agreement; no promises, terms, or conditions not recited, incorporated or referenced herein, including prior agreements or oral discussions, shall be binding upon either Party.

7.9 Notices. All written notices, requests and communications, unless specifically required to be given by a specific method may be (i) delivered in person, obtaining a signature indicating successful delivery; (ii) sent by a recognized overnight delivery or by regular mail to the address set forth below; or (iii) sent by e-mail to the e-mail address set forth below. Either party may at any time give notice to the other party of a change of name, address, or telephone or telefacsimile number.

To School District:
Rafael Obafemi, Chief Financial and Operating Officer
Evanston/Skokie School District 65
1500 McDaniel Avenue
Evanston, IL 60201
obafemir@district65.net

7.10 Availability of Appropriations. DPH's obligations hereunder shall cease immediately, without penalty, if: (i) the sufficient State funds have not been appropriated to DPH; (ii) the Governor or DPH reserves appropriated funds; or (iii) the Governor or DPH determines that appropriated funds may not be available. DPH shall provide written notice of any such funding failure and its election to terminate or suspend this Agreement as soon as practicable. Any suspension or termination pursuant to this Section will be effective upon Data User's/School District's receipt of notice.

7.11 Headings. Section and other headings contained in this Agreement are for reference purposes only and are not intended to describe, interpret, define or limit the scope, extent or intent of this Agreement or any provision hereof.

7.12 Counterparts. This Agreement may be executed in one or more counterparts, each of which shall be considered to be one and the same agreement, binding on all Parties hereto, notwithstanding that all Parties are not signatories to the same counterpart. Further, duplicated signatures, signatures transmitted via facsimile, or signatures contained in a Portable Document Format (PDF) document shall be deemed original for all purposes.

IN WITNESS WHEREOF, the Parties hereto have caused this Agreement to be executed by their duly authorized representatives.

Attachment A
Illinois Department of Public Health
Procedure for Access to Data

In order to effectuate access to data in a secure and confidential manner, the Department will permit Data User special access to a secure office location under the supervision of Department employees. While Data User is on site at the Department, the Department will provide him with access in order to geocode enrollment data limited to School District. The Department will provide only the minimum necessary data from the birth records for Data User to perform the geocoding.

The Process will occur in the following manner:

1. Data User will use his personal computer and software;
2. Data User will perform the geocoding at a Department office;
3. Data User will not be connected to another computer or the Internet with or without a hardwire connection;
4. Data User will arrive with a polygon and line files that will be used to accomplish the geocoding;
5. Data User will convert the Department's Excel file of birth data to a geocodable format;
6. Data User will geocode the data for the elementary school service area of the School District;
7. Data User will determine the cause of the exceptions (data that did not geocode properly); and will remove those records that are outside the service area of the School District;
8. Data User will geocode the remaining exceptions on an individual basis;
9. Data User will generate the counts by month for each elementary school service area for the requested years of data for the School District;
10. Data User will return the Department's data and delete all GIS files created by geocoding the Excel files and empty his recycle bin on his computer after completing the preceding step;
11. Data User will agree that at all times Data User will consent to monitoring and supervision by Department staff during the geocoding process;
12. Department staff will confirm that Data User is leaving with only counts of the number of monthly births for the School District for each year. Only this aggregate data will be allowed to leave Department premises.

Attachment B
Illinois Department of Public Health
Data Base Element List
Evanston/Skokie School District 65 – Rafael Obafemi, CFOO

The following data elements will be provided for the data request:

1. Date of Birth (month/year only)
2. Address
3. City
4. Zip Code
5. Latitude and Longitude
6. Race
7. Ethnicity
8. Sex

The data will be provided for the following zip code(s): 60091, 60202, 60203, 60645, 60076, 60626, and 60201

Attachment C

Acknowledgment: Request for Illinois Vital Records Data

In order for the Illinois Department of Public Health (DPH) to provide data to researchers for the purposes of this study, DPH requires compliance with all provisions of the Illinois Health Finance Reform Act (20 ILCS 2215), the Illinois Health Statistics Act (410 ILCS 520), and all other applicable State and federal laws, rules, and regulations.

DPH recognizes that each request must be carefully considered to ensure the proper balance between appropriately protecting data and utilizing data to assist with, and improve, health care operations. This Acknowledgment describes the privacy and confidentiality protections you must put in place, the data security measures you must comply with, and formalizes your responsibilities with regard to your use of Illinois vital records data. Nothing in this Acknowledgment alters Data User's obligations under the Data Use Memorandum of Understanding.

For the purpose of this Attachment B only, the term Data User refers to the individual signing this acknowledgment. I, **Charles Kofron, Ph.D.**, (Data User) acknowledge that DPH is providing vital records data for use pursuant to the following conditions, and that my failure to comply with these conditions may result in DPH revoking my authority to access the vital records data:

1. Data User understands and agrees that any and all Data provided by DPH which may lead to the identification of any patient, physician, other person, or reporting facility is strictly privileged and confidential. Data User agrees to keep all such Data strictly confidential at all times.
2. Data User agrees to report Data in such a way as to maintain the confidentiality of individual records. Data User agrees not to report Data in a way that will enable identification of individual patients or individual facilities; not to publish, disseminate, or otherwise release any information acquired or produced pursuant to this Agreement with cell size less than 10 and/or rate with numerator less than 10, due to the statistically high probability patient identification; and not to publish, disseminate, or otherwise release any raw Data provided by DPH pursuant to this Agreement.
3. Data User agrees to refrain from using any means or methods to interpret, analyze, or manipulate Data in an attempt to identify individual patients using either the Data provided pursuant to this Agreement, or any other available data sets. Data User will not attempt to link, or permit others to attempt to link, the health care records of persons in this data set with personally identifiable records from any other source.
4. Data User shall not publish, disseminate, copy, reproduce, or otherwise release any information acquired or produced pursuant to this Agreement without adhering to the procedures outlined in this Agreement.
5. Data User agrees to notify DPH in writing within one (1) business day following receipt a Freedom of Information Act (FOIA) request, subpoena or court order related to the Data provided pursuant to this Agreement. DPH shall determine whether the information sought contains identifiable or confidential information, and whether it shall be released.
6. Data User agrees that, while conducting approved activities under the terms of this Agreement, if Data User receives a request for the release of an individual's identity or identifying information, the information **will not** be released. Data User agrees to provide DPH with written notification of the request within one (1) business day.
7. Data User will not, under any circumstances, permit the inspection or copying of the Data by any person not (i) directly involved in the Data use; and (ii) previously disclosed to DPH.
8. Data User will not allow third-party access to any portion of the Data without the prior, express written consent of DPH.
9. Data User shall notify DPH in writing within twenty-four (24) hours of the time at which any violation of the terms, including but not limited to a breach in safeguards, security, or confidentiality, of this Agreement becomes known.

Attachment C (continued)

10. Data User agrees that the terms of Data usage are strictly conditioned upon an agreement and acknowledgement that, unless otherwise allowed by the Agreement, the Data shall not be sold, assigned, or transferred in any manner, and that any actual or attempted sale, assignment, or transfer, without the express written permission of DPH's Division of Vital Records (DVR), shall subject Data User to all available remedies given to DPH and DVR under State and federal laws, rules, and regulations. Data User agrees that, unless the agreed upon purpose of this Agreement is the resale of data, Data User is prohibited from releasing, redistributing, or reselling DPH's original, patient-level data in any form, including linked data sets.
11. Data User agrees that, unless the agreed upon purpose of this Agreement is the resale of data, Data User may not resell, redistribute, or make multiple uses of any output based on the Data including, analyses, studies, risk-adjusted or actual subsets or aggregations.
12. Data User shall not provide the Data to a subcontractor without DVR's express written permission. Any contractors or subcontractors given access to the Data to carry out manipulation and/or analyses on behalf of the School District shall signify their understanding of the need to maintain the confidentiality of such Data by signing a data use agreement with the Data User or Data User's School District. Data User shall provide DPH with a copy of the current language contained in such data use agreements.
13. Data User agrees to ensure that any Data supplied to a contractor or subcontractor for use in a specific project will be returned to Data User or destroyed upon completion of the project and purged from the contractor or subcontractor's system.
14. Data User agrees to ensure that, if Data are linked to other data sets and if a contractor or subcontractor performs the linking, the original Data will be returned to Data User or destroyed following the linking of these Data.
15. Data User agrees that Data User and any other individuals acting under the supervision of the Data User for the purposes of using the analyses, studies, or aggregations based on the Data for marketing analysis, sales activities, or other business purposes shall use reasonable and appropriate safeguards and security measures to prevent the use or disclosure of the information for any purposes other than those permitted by this Agreement.
16. Data User, and anyone under Data User's supervision, shall use appropriate safeguards and security measures to prevent the use or disclosure of the Data for any purpose(s) other than those expressly permitted by this Agreement. Data User agrees that anyone acting under Data User's supervision shall have access to Data only at the level required to accomplish the work.
17. Data User will make no statement nor permit others to make statements implying or suggesting that interpretations drawn are those of health care facilities that may be identified in the data, either individually or as a group, or of DPH.
18. Data User agrees to store all electronic notes and Data on password protected computers at the School District, and not to remove Data or notes from School District property.

I have read the foregoing requirements and agree to comply with them. I acknowledge that my failure to comply with these requirements may subject me to all available remedies given to DPH under State and federal laws, rules, and regulations. I also acknowledge that all confidentiality and record retention obligations herein shall survive the termination of the underlying Agreement.

Charles Kofron, Ph.D. Date

IDPH VR Data Request Name: Evanston/Skokie School District 65 – Rafael Obafemi
IDPH VR MOU NUMBER: 21S002

Attachment C
Acknowledgment: Request for Illinois Vital Records Data

In order for the Illinois Department of Public Health (DPH) to provide data to researchers for the purposes of this study, DPH requires compliance with all provisions of the Illinois Health Finance Reform Act (20 ILCS 2215), the Illinois Health Statistics Act (410 ILCS 520), and all other applicable State and federal laws, rules, and regulations.

DPH recognizes that each request must be carefully considered to ensure the proper balance between appropriately protecting data and utilizing data to assist with, and improve, health care operations. This Acknowledgment describes the privacy and confidentiality protections you must put in place, the data security measures you must comply with, and formalizes your responsibilities with regard to your use of Illinois vital records data. Nothing in this Acknowledgment alters Data User's obligations under the Data Use Memorandum of Understanding.

For the purpose of this Attachment B only, the term Data User refers to the individual signing this acknowledgment. I, **Lou Gatta** (Data User) acknowledge that DPH is providing vital records data for use pursuant to the following conditions, and that my failure to comply with these conditions may result in DPH revoking my authority to access the vital records data:

1. Data User understands and agrees that any and all Data provided by DPH which may lead to the identification of any patient, physician, other person, or reporting facility is strictly privileged and confidential. Data User agrees to keep all such Data strictly confidential at all times.
2. Data User agrees to report Data in such a way as to maintain the confidentiality of individual records. Data User agrees not to report Data in a way that will enable identification of individual patients or individual facilities; not to publish, disseminate, or otherwise release any information acquired or produced pursuant to this Agreement with cell size less than 10 and/or rate with numerator less than 10, due to the statistically high probability patient identification; and not to publish, disseminate, or otherwise release any raw Data provided by DPH pursuant to this Agreement.
3. Data User agrees to refrain from using any means or methods to interpret, analyze, or manipulate Data in an attempt to identify individual patients using either the Data provided pursuant to this Agreement, or any other available data sets. Data User will not attempt to link, or permit others to attempt to link, the health care records of persons in this data set with personally identifiable records from any other source.
4. Data User shall not publish, disseminate, copy, reproduce, or otherwise release any information acquired or produced pursuant to this Agreement without adhering to the procedures outlined in this Agreement.
5. Data User agrees to notify DPH in writing within one (1) business day following receipt a Freedom of Information Act (FOIA) request, subpoena or court order related to the Data provided pursuant to this Agreement. DPH shall determine whether the information sought contains identifiable or confidential information, and whether it shall be released.
6. Data User agrees that, while conducting approved activities under the terms of this Agreement, if Data User receives a request for the release of an individual's identity or identifying information, the information **will not** be released. Data User agrees to provide DPH with written notification of the request within one (1) business day.
7. Data User will not, under any circumstances, permit the inspection or copying of the Data by any person not (i) directly involved in the Data use; and (ii) previously disclosed to DPH.
8. Data User will not allow third-party access to any portion of the Data without the prior, express written consent of DPH.

9. Data User shall notify DPH in writing within twenty-four (24) hours of the time at which any violation of the terms, including but not limited to a breach in safeguards, security, or confidentiality, of this Agreement becomes known.

Attachment C (continued)

10. Data User agrees that the terms of Data usage are strictly conditioned upon an agreement and acknowledgement that, unless otherwise allowed by the Agreement, the Data shall not be sold, assigned, or transferred in any manner, and that any actual or attempted sale, assignment, or transfer, without the express written permission of DPH's Division of Vital Records (DVR), shall subject Data User to all available remedies given to DPH and DVR under State and federal laws, rules, and regulations. Data User agrees that, unless the agreed upon purpose of this Agreement is the resale of data, Data User is prohibited from releasing, redistributing, or reselling DPH's original, patient-level data in any form, including linked data sets.
11. Data User agrees that, unless the agreed upon purpose of this Agreement is the resale of data, Data User may not resell, redistribute, or make multiple uses of any output based on the Data including, analyses, studies, risk-adjusted or actual subsets or aggregations.
12. Data User shall not provide the Data to a subcontractor without DVR's express written permission. Any contractors or subcontractors given access to the Data to carry out manipulation and/or analyses on behalf of the School District shall signify their understanding of the need to maintain the confidentiality of such Data by signing a data use agreement with the Data User or Data User's School District. Data User shall provide DPH with a copy of the current language contained in such data use agreements.
13. Data User agrees to ensure that any Data supplied to a contractor or subcontractor for use in a specific project will be returned to Data User or destroyed upon completion of the project and purged from the contractor or subcontractor's system.
14. Data User agrees to ensure that, if Data are linked to other data sets and if a contractor or subcontractor performs the linking, the original Data will be returned to Data User or destroyed following the linking of these Data.
15. Data User agrees that Data User and any other individuals acting under the supervision of the Data User for the purposes of using the analyses, studies, or aggregations based on the Data for marketing analysis, sales activities, or other business purposes shall use reasonable and appropriate safeguards and security measures to prevent the use or disclosure of the information for any purposes other than those permitted by this Agreement.
16. Data User, and anyone under Data User's supervision, shall use appropriate safeguards and security measures to prevent the use or disclosure of the Data for any purpose(s) other than those expressly permitted by this Agreement. Data User agrees that anyone acting under Data User's supervision shall have access to Data only at the level required to accomplish the work.
17. Data User will make no statement nor permit others to make statements implying or suggesting that interpretations drawn are those of health care facilities that may be identified in the data, either individually or as a group, or of DPH.
18. Data User agrees to store all electronic notes and Data on password protected computers at the School District, and not to remove Data or notes from School District property.

I have read the foregoing requirements and agree to comply with them. I acknowledge that my failure to comply with these requirements may subject me to all available remedies given to DPH under State and federal laws, rules, and regulations. I also acknowledge that all confidentiality and record retention obligations herein shall survive the termination of the underlying Agreement.

Lou Gatta **Date** 9/1/2021

Attachment C
Acknowledgment: Request for Illinois Vital Records Data

In order for the Illinois Department of Public Health (DPH) to provide data to researchers for the purposes of this study, DPH requires compliance with all provisions of the Illinois Health Finance Reform Act (20 ILCS 2215), the Illinois Health Statistics Act (410 ILCS 520), and all other applicable State and federal laws, rules, and regulations.

DPH recognizes that each request must be carefully considered to ensure the proper balance between appropriately protecting data and utilizing data to assist with, and improve, health care operations. This Acknowledgment describes the privacy and confidentiality protections you must put in place, the data security measures you must comply with, and formalizes your responsibilities with regard to your use of Illinois vital records data. Nothing in this Acknowledgment alters Data User's obligations under the Data Use Memorandum of Understanding.

For the purpose of this Attachment B only, the term Data User refers to the individual signing this acknowledgment. I, **Sarita Smith** (Data User) acknowledge that DPH is providing vital records data for use pursuant to the following conditions, and that my failure to comply with these conditions may result in DPH revoking my authority to access the vital records data:

1. Data User understands and agrees that any and all Data provided by DPH which may lead to the identification of any patient, physician, other person, or reporting facility is strictly privileged and confidential. Data User agrees to keep all such Data strictly confidential at all times.
2. Data User agrees to report Data in such a way as to maintain the confidentiality of individual records. Data User agrees not to report Data in a way that will enable identification of individual patients or individual facilities; not to publish, disseminate, or otherwise release any information acquired or produced pursuant to this Agreement with cell size less than 10 and/or rate with numerator less than 10, due to the statistically high probability patient identification; and not to publish, disseminate, or otherwise release any raw Data provided by DPH pursuant to this Agreement.
3. Data User agrees to refrain from using any means or methods to interpret, analyze, or manipulate Data in an attempt to identify individual patients using either the Data provided pursuant to this Agreement, or any other available data sets. Data User will not attempt to link, or permit others to attempt to link, the health care records of persons in this data set with personally identifiable records from any other source.
4. Data User shall not publish, disseminate, copy, reproduce, or otherwise release any information acquired or produced pursuant to this Agreement without adhering to the procedures outlined in this Agreement.
5. Data User agrees to notify DPH in writing within one (1) business day following receipt a Freedom of Information Act (FOIA) request, subpoena or court order related to the Data provided pursuant to this Agreement. DPH shall determine whether the information sought contains identifiable or confidential information, and whether it shall be released.
6. Data User agrees that, while conducting approved activities under the terms of this Agreement, if Data User receives a request for the release of an individual's identity or identifying information, the information **will not** be released. Data User agrees to provide DPH with written notification of the request within one (1) business day.
7. Data User will not, under any circumstances, permit the inspection or copying of the Data by any person not (i) directly involved in the Data use; and (ii) previously disclosed to DPH.
8. Data User will not allow third-party access to any portion of the Data without the prior, express written consent of DPH.

9. Data User shall notify DPH in writing within twenty-four (24) hours of the time at which any violation of the terms, including but not limited to a breach in safeguards, security, or confidentiality, of this Agreement becomes known.

Attachment C (continued)

10. Data User agrees that the terms of Data usage are strictly conditioned upon an agreement and acknowledgement that, unless otherwise allowed by the Agreement, the Data shall not be sold, assigned, or transferred in any manner, and that any actual or attempted sale, assignment, or transfer, without the express written permission of DPH's Division of Vital Records (DVR), shall subject Data User to all available remedies given to DPH and DVR under State and federal laws, rules, and regulations. Data User agrees that, unless the agreed upon purpose of this Agreement is the resale of data, Data User is prohibited from releasing, redistributing, or reselling DPH's original, patient-level data in any form, including linked data sets.
11. Data User agrees that, unless the agreed upon purpose of this Agreement is the resale of data, Data User may not resell, redistribute, or make multiple uses of any output based on the Data including, analyses, studies, risk-adjusted or actual subsets or aggregations.
12. Data User shall not provide the Data to a subcontractor without DVR's express written permission. Any contractors or subcontractors given access to the Data to carry out manipulation and/or analyses on behalf of the School District shall signify their understanding of the need to maintain the confidentiality of such Data by signing a data use agreement with the Data User or Data User's School District. Data User shall provide DPH with a copy of the current language contained in such data use agreements.
13. Data User agrees to ensure that any Data supplied to a contractor or subcontractor for use in a specific project will be returned to Data User or destroyed upon completion of the project and purged from the contractor or subcontractor's system.
14. Data User agrees to ensure that, if Data are linked to other data sets and if a contractor or subcontractor performs the linking, the original Data will be returned to Data User or destroyed following the linking of these Data.
15. Data User agrees that Data User and any other individuals acting under the supervision of the Data User for the purposes of using the analyses, studies, or aggregations based on the Data for marketing analysis, sales activities, or other business purposes shall use reasonable and appropriate safeguards and security measures to prevent the use or disclosure of the information for any purposes other than those permitted by this Agreement.
16. Data User, and anyone under Data User's supervision, shall use appropriate safeguards and security measures to prevent the use or disclosure of the Data for any purpose(s) other than those expressly permitted by this Agreement. Data User agrees that anyone acting under Data User's supervision shall have access to Data only at the level required to accomplish the work.
17. Data User will make no statement nor permit others to make statements implying or suggesting that interpretations drawn are those of health care facilities that may be identified in the data, either individually or as a group, or of DPH.
18. Data User agrees to store all electronic notes and Data on password protected computers at the School District, and not to remove Data or notes from School District property.

I have read the foregoing requirements and agree to comply with them. I acknowledge that my failure to comply with these requirements may subject me to all available remedies given to DPH under State and federal laws, rules, and regulations. I also acknowledge that all confidentiality and record retention obligations herein shall survive the termination of the underlying Agreement.

Summary totals

Forecasting change in the size and distribution of the household population begins at the county level with several sources of data. Esri incorporates a full-time series of intercensal and vintage-based county estimates from the U.S. Census Bureau. Because testing has revealed improvement in accuracy by using a variety of sources to track county population trends, Esri also employs a time series of county-to-county migration data from the Internal Revenue Service, building permits and housing starts, plus residential postal delivery counts. Finally, local data sources that tested well against Census 2010 are reviewed. The end result balances the measures of growth or decline from a variety of data series.

Measuring change in population or households at the county level is facilitated by the array of data reported for counties. Unfortunately, there is no current data reported specifically for block groups. Past trends can be calculated from previous census counts; the American Community Survey (ACS) provides five-year averages. However, these sources are not recent. To measure current population change by block group, Esri models the change in households from multiple sources: Experian; the U.S. Postal Service (USPS); Zonda (formerly Metrostudy), a Hanley Wood company; and RealPage (formerly Axiometrics), in addition to several ancillary sources.

The U.S. Postal Service publishes monthly counts of residential deliveries for every U.S. postal carrier route. This represents the most comprehensive and current information available for small, subcounty geographic areas. Carrier routes are a fluid geographic construct that is redefined continuously to incorporate real changes in the housing inventory and occupancy plus administrative changes in staffing and budgets of local post offices.

Converting delivery statistics from postal carrier routes to census block groups is a complex challenge. Carrier routes are defined to deliver the mail, while block groups are constructed to collect and report census data. Comparing two areas that are defined for

wholly different purposes provides one significant conversion issue. Carrier routes commonly overlap multiple block groups. In many cases, a carrier route encompasses disjointed areas that can be distant from each other, but block groups are rarely divided into multiple polygons. These overlaps require an effective method of allocating the postal delivery counts across multiple block groups.

Esri has developed a technique to link carrier routes to the correct block groups—using the actual locations of mail deliveries. Its proprietary Address Based Allocation (ABA) methodology was developed in 2005 to solve the complex challenge of converting delivery counts from carrier routes to block groups. This allocation method assigns carrier routes using household addresses that are geocoded at the block level to serve as the foundation for the conversion. The approach is unbounded by geographic borders or arbitrary assumptions about the distribution of households or postal deliveries. ABA results have been tested extensively against Census 2010 counts, including an independent evaluation that involved data from four other vendors. This test confirmed the accuracy of Esri's ABA allocation method.[1]

For over a decade, Esri has licensed data from Zonda to track new residential construction in the top U.S. housing markets. This database identifies the location and characteristics of individual construction projects, including total units planned, under construction, and closed by type of housing. This data is especially critical in tracking growth in previously unpopulated areas. Beginning with the 2016 updates, Esri has utilized an additional database from Zonda that more than doubles Esri's geographic coverage and the number of units planned and completed. The addition of this database gives the household and housing unit update a finer level of granularity and insight into smaller housing markets across the nation.

RealPage housing data is incorporated to capture the growing multifamily rental market. Like Zonda, which covers new residential-owned dwellings such as single-family homes and condominiums, RealPage collects and maintains data on planned, new, and existing rental properties of multifamily and student apartments, nationwide. This data source provides a wealth of property-level characteristics, such as the total number of units or beds, building type, number of stories, and occupancy, as well as asking rent. RealPage's inventory of rental properties expanded due to a corporate merger. This contributed to a near 30 percent increase in rental properties incorporated in Esri's models this year.

The best techniques are derived from a combination of models and data sources. Discrepant trends are checked extensively against independent sources and premium imagery data from Esri's ArcGIS Living Atlas of the World. Finally, totals for block groups are controlled to the county totals. Despite the appeal of microforecasting, there is simply more information available to track population change by county than by household. Ignoring the advantage of county-level data would be throwing away information.

5-year projections

Projections are necessarily derived from current events and past trends. The past and present are known; the future must be extrapolated from this knowledge base. Even though projections represent the unknown, they are not uninformed. Guidelines for the development of projections also inform the use of those projections.

- The recent past provides a reasonable clue to the course of future events, especially if that information is tempered with a historical perspective

- A stable rate of growth is easier to anticipate than rapid growth or decline.
- The damaging effects of natural disasters cannot be anticipated. Esri makes every effort to assess the impact of sudden, catastrophic events like strong storms, flooding, or wildfires.
- The risk inherent in forecasting is inversely related to the size of an area: the smaller the area, the greater the risk.
- The risk increases with the length of the projection interval. Any deviation of the projected trends from actual events is amplified over time.

Esri revises its forecasts annually to draw on the latest data. Future construction projects, as well as developments currently under construction, give Esri a unique view of the future landscape. Projections can be enhanced with personal knowledge of an area to provide the qualitative, anecdotal detail that is not captured in a national database. It is incumbent on the data user and the producers to incorporate as much information as possible when assessing local trends, especially for areas that are subject to "boom-bust" cycles or natural disasters.

Population and household characteristics

Esri incorporates a variety of data sources to update small areas like block groups, beginning with the latest base, and then adding a mixture of administrative records and private sources to capture change to the base. Shifting the base every year to the latest release of ACS data incorporates real change with sampling error. To establish a more stable base, Esri has built estimate bases for key variables like income, labor force, and home value. The estimate bases combine the best data from ACS with other sources and enable better measures of change than are possible with ACS data alone. Periodic changes to the estimate bases are necessary to collect current change. Base changes impact comparability of the

annual data but provide more reliable estimates. Demographic updates must incorporate both traditional and new data sources to remain current.

The population by age and sex is projected via a cohort survival model that separately calculates the components of population change by age and sex. Applying survival rates specific to the cohort carries a 2015 population base forward. Changes in the population by age and sex diverge at the household level. For example, an area that is losing population can age more rapidly with the loss of population in prime migrant ages, 20–34 years—unless there is a college nearby. Neighborhoods near colleges sustain high turnover from student populations but retain their youthful age distributions.

To capture these variations, Esri's model first separates the group quarters population from the household population and, second, keys the calculations to the size and characteristics of the population. This stratification identifies several different patterns of change by age and sex that can be applied in a cohort survival model.

The changing profile of the U.S. population requires measuring population change by race and Hispanic origin. The American identity is shaped by diversity. Tracking the changing patterns of race and ethnicity provides a current portrait of our society. Historical trends in race and ethnicity combined with the most current data sources by race and Hispanic origin, including population estimates by county and state from the Census Bureau and survey data from the ACS, are analyzed to establish county population by race and Hispanic origin. Forecasts by block group combine local changes in the distributions by race and projected change for counties. The last step controls block group distributions to county totals by race and Hispanic origin.

The changing face of our nation is evident in Esri's Diversity Index, which summarizes racial and ethnic diversity in an area.

Esri's definition of diversity is two-dimensional and combines racial diversity with ethnic diversity. This measure shows the likelihood that two persons, chosen at random from the same area, belong to different races or ethnic groups. In theory, the index ranges from 0 (no diversity) to 100 (complete diversity). An area's diversity index tends toward 100 when the population is more evenly divided across race and ethnic groups. If an area's entire population is divided evenly into two race groups and one ethnic group, the diversity index equals 50. As more race groups are evenly represented in the population, the diversity index increases. Race and Hispanic origin data is reported by the Census Bureau and other agencies as grouped summary data; therefore, in practice, the diversity index will not reach the maximum value of 100. Nationally, Esri's Diversity Index has risen from 60.6 in 2010 to 65.4 in 2021, with a forecast to 67.5 in five years.

Diversity also describes the composition of American households. Esri uses the Census Bureau's definition of families and family households. Families include a householder and one or more people living in the same household who are related to the householder by birth, marriage, or adoption; therefore, family households are equal to the number of families. Family households can also include unrelated nonfamily members. Family households are modeled from Census 2010, Current Population Survey (CPS), and ACS data. Average family size has increased from 3.14 in 2010 to 3.15 in 2021.

The attendant change in average household size is nominal from 2000 to 2010, 2.59 to 2.58, respectively, and is back to 2.58 for 2021. The gradual change in household size has made it uniquely suitable to forecasting the change in household population from the change in households. Average household size is traditionally one of the most stable and predictable components of the forecasts. Household forecasts are predicated on local patterns of change, which are controlled to the more constant trends for states and counties.

Few block groups represent a cross-section of U.S. households. For example, in areas that gain population from immigration, the trend in average household size is an increase. To distinguish local variation, Esri's model is keyed to the characteristics of households at the block group level. This stratification identifies several different patterns of change by household type that are applied to forecast trends in the characteristics of households—both family composition and tenure. Local change is emphasized in the 2021/2026 forecasts of households and families for counties and block groups. National and state trends are monitored with sources such as the CPS and ACS from the Census Bureau and then applied as controls.

A mixed model approach is used to forecast 2021 educational attainment and marital status, combining higher-level and timelier single-year ACS data with five-year lower-level ACS data. Adjustments are factored for changes to the base population's characteristics, including changes to group quarters. Forecasted distributions are applied to Esri's 2021 population aged 15 years and older to update marital status. Similarly, educational attainment is updated for the population aged 25 years and older.

Housing data

Esri's housing updates include total housing units, occupancy, tenure, and home value. Total housing unit updates are created from recorded changes in the housing inventory and estimated changes in occupancy rates since April 2010, applied to Census 2010 base data. Recorded change in the housing inventory is culled from several data sources, including multiple construction data inputs from Zonda and RealPage, data for new manufactured homes placed by state from the Census Bureau, and building permits for permit-issuing places and counties. As of 2010, only half of the counties had complete coverage with building permits. Numerous independent sources are leveraged to obtain detailed

information on housing development data where no building permits exist. Independent estimates of change in occupancy are calculated from USPS residential lists, the ACS, and various state and local data sources. Additionally, data from the CPS and the Housing Vacancy Survey (HVS) from the Census Bureau is used to model trends in occupancy.

Data for tenure represents owner- and renter-occupied housing units. Together, the two components sum to total households or total occupied housing units. A time series model based on data from the HVS, combined with changes in the CPS, the ACS, and intercensal data, guides tenure forecasts. With a blend of top-down and bottom-up techniques, the forecasts take advantage of the latest information from survey data at higher levels of geography while employing local characteristics at the lower levels. The small-area models leverage more geographically granular trends from ACS as well as integrate the Zonda and RealPage housing data to update an area's tenure profile. This year, the ACS tenure time series data used in the models was smoothed to further reduce survey noise by tempering outlying data points. Data from lower levels of geography is controlled to higher levels to produce the tenure updates. Changes in owner versus renter occupancy are forecasted independently and then controlled to total households.

Esri reports home value for all owner-occupied housing units. Beginning with 2018, home value estimates include additional intervals to capture homes valued at $1 million to $1.5 million, $1.5 million to $2 million, and $2 million or more. A total of 13 home value intervals are reported.[2] Summary measures of home value include medians and averages that are calculated from the distributions of home value. Medians represent the middle of the distribution or the point that splits the distribution equally.[3] Medians are calculated using linear interpolation unless the median falls in the highest (>$2,000,000) interval. Following the Census Bureau's convention, this median is reported as $2,000,001 because housing value in the upper interval is top-coded to

$2,000,000. Due to limited data availability for these high-valued homes, Esri top-codes average home value to $2,250,000.

Esri tracks the change in home value using several different sources, including annual estimates from the ACS, the Home Price Expectations Survey from Pulsenomics, and the House Price Index (HPI) from the Federal Housing Finance Agency (FHFA). The Home Price Expectations Survey relies on a survey of more than 100 industry experts to forecast growth in the housing market. This forward-looking source is a key input to Esri's forecasts. The HPI is designed to monitor changes in average home prices based on repeat sales or refinancing of the same properties. The index is derived from mortgage loans purchased or securitized by Fannie Mae or Freddie Mac.

Esri's 2021 home value estimates incorporate the extraordinary shift in the housing market following the initial shock of the COVID-19 pandemic. A year ago, with large swaths of the economy at a standstill, households faced unemployment, pay cuts, and uncertainty. Accordingly, Esri assumed a very conservative 0.4 percent growth in median home value from 2019 to 2020. Fueled by low mortgage rates and positive consumer sentiment as the economy recovers from the COVID-19 shutdown, the real estate market is experiencing unprecedented demand coupled with limited supply. Housing prices have soared in the last year. Esri forecasts a 12.3 percent appreciation in median home value between 2020 and 2021 and projects 3.5 percent annual change between 2021 and 2026.

Esri's model emphasizes the importance of a good, stable forecast base. Employing both the ACS's historical five-year estimates and household survey data, Esri's 2021 estimates begin with an updated forecast base that leverages the growing stability of ACS data. Once every few years and particularly during real estate market cycles, it is prudent to reset the base to capture the current housing landscape. Though this does preclude comparisons to past updates, especially for small areas, the base

provides a strong foundation to measure change. Local estimates of home value change incorporate supply-demand characteristics, the socioeconomic traits of householders in the area, and trends assessed for larger markets.

Esri leverages current housing and income data to provide a snapshot of affordability. Esri's approach to measuring housing affordability uses an index to quantify the ability of a typical resident to purchase an existing home in an area.[4] Employing the national average contract mortgage rate from the Federal Housing Finance Agency, an interest rate of 3.3 percent is estimated for Esri's 2021 Housing Affordability Index model. A 30-year mortgage is assumed, with a down payment of 20 percent of the home price. Regional property tax rates are determined from the latest round of the ACS, and Esri's model follows the Federal Housing Administration's guidelines for debt service ratios. Additionally, the 2021 Percent of Income for Mortgage (POIFM) quantifies the percentage of median household income dedicated to mortgage payments on a home priced at the median value.

Labor force data

Esri forecasts the 2021 employed and unemployed population aged 16 and older who are either working or actively looking for work, also known as the civilian labor force. After a large GDP drop in Q2 2020 and then a rebound in Q3 2020, the economy has shown continued growth, with GDP increasing at an annual rate of 6.4 percent in Q1 2021. The corresponding job growth raised the total workforce to more than 157 million people. While prepandemic levels of unemployment and labor force participation have not yet been reached, the impact of factors such as the rollout of vaccines, updated public health guidelines, and businesses reopening has helped boost the labor force outlook considerably compared to the previous year.

The civilian labor force does not include active-duty military, institutionalized individuals, and those not actively looking for work.[5] The employed population 16 and older is further broken down by industry and occupation. Esri also provides additional labor market detail with the release of employment and unemployment estimates by four age groups: 16 to 24, 25 to 54, 55 to 64, and 65 and older. These variables are modeled using one- and five-year ACS employment and work status tables, CPS tables, and Local Area Unemployment Statistics (LAUS) trends.

Estimates of the civilian labor force integrate recent change in the supply and demand for labor from the LAUS, Occupational Employment Statistics (OES), and Current Employment Statistics (CES) programs of the Bureau of Labor Statistics (BLS), as well as the ACS and CPS from the U.S. Census Bureau. Federal statistical surveys are the principal sources for labor force trends. The 2021 employment and unemployment estimates are developed from a block group base constructed from one- and five-year ACS labor force tables and current sources. Esri's updated employment by industry and occupation captures temporal change from multiple federal statistical sources: the ACS and CPS from the Census Bureau and the CES and OES programs from the BLS. In 2019, the ACS-derived base was updated to take advantage of the latest survey data to generate more current labor force profiles for small areas. Consequently, comparisons to Esri's labor force estimates prior to 2019 are not advised.

Household income

Esri's 2021 household income estimates are reported for households as of July 1, 2021, and represent household income for the previous calendar year 2020. Taking into account that the United States officially hit the peak of the business cycle in February 2020, historical recessionary impact on household income, compiled from trusted public data sources, is used to

model real income decline. Forecast year 2026 estimates are reported for forecasted households as of July 1, 2026, and represent household income for 2025. The five-year household income estimates assume historical postrecession income recovery rates.

Household income distributions are estimated for areas with 10 or more households only. Esri implements the definition of money income used by the Census Bureau. For each person 15 years of age or older, money income received in the preceding calendar year is summed from earnings, unemployment compensation, Social Security, Supplemental Security Income, public assistance, veterans' payments, survivor benefits, disability benefits, pension or retirement income, interest, dividends, rent, royalties, estates and trusts, educational assistance, alimony, child support, financial assistance from outside the household, and other income.

There are substantial differences between the Bureau of Economic Analysis (BEA) and the Census Bureau in estimates of per capita income. Care should be taken when comparing money estimates with other data sources since many income estimates are based solely on BEA data. Different definitions, methods of data collection, reference area, and population coverage generate different counts and measures of income.[6] BEA calculates personal income as part of its mission to produce national income accounting estimates such as the gross national product. The Census Bureau collects money income statistics to satisfy its objective to enumerate and describe the population of the United States.

Data for consumer income collected by the Census Bureau covers money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, and so on.

Early in the decade, extensive testing concluded that collapsing the ACS's 16 household income intervals into fewer intervals significantly improves statistical reliability. Esri's model estimates household income by nine income intervals.[7]

Estimates for household income are in nominal dollars. In other words, the growth of income attributed to inflation is included in the estimate. Esri models nominal household income directly. With inflation estimates only available at the national and regional levels and selected major cities, and a lack of local area inflation data, estimating local real household income is imprudent. Esri tracks national inflation rates to guide both current-year and forecast-year estimates. Expected national inflation is based on trends from 5- and 10-year break-even rates. These rates are computed from the spread between nominal and inflation-adjusted Treasury securities as of the end of 2020. Break-even rates represent an estimate of the average expected inflation premium that market participants are pricing into these securities over the two time horizons. The annual inflation factor is forecasted at 1.2 percent.

To estimate income for households, Esri evaluates an extensive list of sources for household income trends that include both federal and proprietary sources. The review of national surveys includes the ACS (both one-year and five-year estimates), the BEA's local personal income series, the CPS, and the BLS's Consumer Price Index.

Esri's 2021 income estimates build on a newly updated forecast base. The forecast base capitalizes on historical ACS five-year estimates and household surveys. In any sample-based data source, both sampling and nonsampling errors contribute to the instability of time series data for small areas. Esri has designed parameters to quantify and normalize instability in its sources, producing a robust base on which to measure income change. To leverage gains in stability shown by ACS and capture recent acceleration in household income, Esri has shortened the forecast

base period. This does, however, mark a break in the time series at the 2020 time point for household income and related variables: age by income, disposable income, and net worth.

After forecasting the state income distributions, household income is estimated for block groups. Esri's income forecasts are uniquely designed to distinguish local variation, changes in income inequality, and urbanicity as differentiators of income growth. The model correlates the characteristics of households at the block group level with changes in income. This stratification identifies several different patterns of change by household type that are applied to forecast trends in income. Modeling links the current income change to all households with similar socioeconomic characteristics. Areas with small household bases or missing base data, where the model is unable to capture the local variation, are forecast with another level of modeling to capture the change in income by strata (a group of areas classified by their sociodemographic characteristics). Separate forecasts of the change in income by strata are aggregated to compose the income distributions.

Summary measures of household income include medians and averages that are calculated from the distributions of income. A median represents the middle of the income distribution or the point that splits the distribution equally. A median is calculated from the income intervals of the distribution using Pareto interpolation, unless the median falls in the lowest (<$15,000) or highest (>$200,000) interval. For the lowest interval, linear interpolation is used. When the median falls in the upper interval, it is reported as $200,001 because households in the upper interval are top-coded to $200,000.

Averages are computed from estimates of aggregate income. Esri's process employs unique sociodemographic methods to model distributions and aggregates simultaneously. This top-down, bottom-up approach not only provides well-grounded small-area

estimates but also places emphasis on the relationship between medians and averages.

Household income by age of householder

Household income is reported for seven age of householder groups. The income distribution for these age groups is based on the same nine intervals as household income. Methods for median and average calculations follow those used for household income.

Household income reported by age of householder is updated to be consistent with the 2021 distributions of household income and age of householder. To update the age distribution of householders, the ratio of householders by age to the population by age in 2010 is updated to 2021/2026, taking into account the change in group quarters population applied to the current age distributions. After the targets are set, the base distributions of household income by age of householder at the block group level are fitted to current distributions of households by income and age of householder. Independent estimates of age by income are key inputs to the model.

Disposable income

Similar to household income, disposable income is estimated in nominal dollars for nine intervals. Disposable income is also reported for the seven age of householder groups. Methods for median and average calculations follow those used for household income.

Disposable income represents money income after taxes – an estimate of a household's purchasing power. The proportion of household income left after taxes is estimated from special studies

conducted by the Census Bureau to simulate household taxes. Esri's 2021 disposable income incorporates data from the 2019 Annual Social and Economic Supplement of the Current Population Survey (ASEC).

Four types of taxes are deducted: federal individual income taxes, state individual income taxes, FICA (Social Security) and federal retirement payroll taxes, and property taxes for owner-occupied housing. Internal Revenue Service tax rates are used as guidelines for model testing. Esri then applies the proportions of after-tax earnings to income intervals that are cross-tabulated by age of householder for each state. State-specific proportions account for the variation in taxes by state. The proportions, or multipliers, are then applied to the age by income forecasts for block groups and counties to calculate disposable income.

Net worth

The 2021 update of net worth accommodates the release of the Survey of Consumer Finances (SCF), as well as the large swings in the stock market and the housing market during an unprecedented year dominated by the COVID-19 pandemic. Esri's 2020 estimate assumed a decline in household wealth due to the abrupt economic fallout at the onset of the pandemic. At the time of the 2020 update, Wall Street losses had peaked at over 35 percent, with markets exhibiting extreme volatility. The stock market showed remarkable recovery in the latter half of the year, and driven by an exodus of households to more spacious neighborhoods, the demand for real estate exploded. Esri's current median net worth estimate is $143,016 and builds in 8.4 percent annualized growth from the last SCF data point.

Beginning in 2019, Esri's total net worth is reported for 12 intervals to include an upper interval of greater than $2 million. Net worth is also reported for the seven age of householder groups, by 10 net

worth intervals. Summary measures of net worth include medians and averages, which are calculated from the distributions of net worth. Similar to household income methods, a median is calculated from the net worth intervals of the distribution using Pareto interpolation, unless the median falls in the lowest (<$15,000) or highest interval. For the lowest interval, linear interpolation is used. When the median falls in the upper interval, it is reported as $1,000,001 for net worth by age of householder and $2,000,001 for total net worth.

Current income is only one component of a household's financial security. Householders' net worth or accumulated wealth reflects their ability to stay afloat during a financial shock as well as save for future retirement. Net worth is estimated from data on household wealth that is collected from the Surveys of Consumer Finance (SCF) from the Federal Reserve Board from 1992 through 2019. These triennial surveys feature enhanced representation of wealthy households through the comprehensive measurement of net worth components. By definition, net worth equals total household assets less any debts, secured or unsecured. Assets include ownership of homes, rental properties, businesses, individual retirement accounts (IRAs) and Keogh accounts, pension plans, stocks, mutual funds, and motor vehicles. Examples of secured debt include home mortgages and vehicle loans; unsecured debt includes credit cards and other bills or certain bank loans.

Introduced in 2019, Esri's Wealth Index is compiled from a number of indicators of affluence including average household income and average net worth. The concept of wealth is defined by more than above-average household income. Wealth also includes the value of material possessions and resources. Esri captures both income and the accumulation of substantial wealth or the abundance of possessions and resources in its identification of the wealthiest areas in the country. The index represents the wealth of the area relative to the national level. Values exceeding 100 represent above-average wealth.

2021 geography

Current-year estimates and forecasts are prepared initially for counties and block groups. County data is aggregated to Core-Based Statistical Areas (CBSAs), states, or higher levels. Block group data is either aggregated directly or used with a correspondence file to produce data for census tracts, places, county subdivisions, ZIP Codes, congressional districts, and designated market areas (DMAs). For user-defined sites, circles, or polygons, block weights are applied to block group data.

Changes in the geographic areas for which data is tabulated and reported are critical to the analysis of trends. Esri reports data for political and statistical areas that include states, counties, census tracts, block groups, places, county subdivisions, CBSAs, and congressional districts, plus special use areas like ZIP Codes and DMAs. Of course, the provision of small-area data in Esri software enables users to define their own areas of interest too.

Data is reported in 2010 geography for most of the standard political and statistical areas. Statistical areas, such as block groups and census tracts, are defined by the Census Bureau (with help from local officials) to collect and report data for neighborhoods. Historically, these areas change every 10 years with each new census. Political areas, such as counties, cities, or townships, are subject to change by local governments.

Beginning with the 2017 release, Esri incorporated major county changes since 2010:

- The former independent city, Bedford City, Virginia, is now a part of Bedford County, Virginia. Bedford City, Virginia, was dropped from the county inventory.
- Wade Hampton Census Area, Alaska, changed to Kusilvak Census Area, Alaska.

- Shannon County, South Dakota, changed to Oglala Lakota County, South Dakota.

As a result, the county database currently includes 3,142 counties. Underlying block groups, tracts, and county subdivisions reflect these changes.

The 2021/2026 updates reflect the metropolitan and micropolitan statistical areas released by the Office of Management and Budget (OMB) in March 2020. There are 384 metropolitan and 543 micropolitan areas. Congressional districts represent the 116th Congress and TIGER 2019 CD boundaries. The place inventory is also from TIGER 2019 and contains 29,321 areas.

ZIP Codes, which are defined solely by the U.S. Postal Service to expedite mail delivery, can change monthly or whenever the U.S. Postal Service revises delivery routes. ZIP Codes do not represent standard census geographic areas for data reporting. ZIP Code boundaries are not contiguous with census geographic areas or stable over time. Data estimated for ZIP Codes is also subject to change. Residential ZIP Code data is estimated from block group data, using a correspondence created by assigning Census 2010 block points to ZIP Code boundaries from HERE. The vintage of the ZIP Code boundaries is third quarter, 2020; the total number of residential ZIP Codes in this release is 32,109.

The integration of demographic and spatial analysis has not only enabled the development of more accurate block group totals, but it has also provided the opportunity to update block totals. Blocks are the lowest common denominator in the geographic hierarchy and progress to block groups, tracts, counties, and states. Blocks are most useful in the estimation of data for polygons, which can be any area outside the geographic hierarchy, from retail trade areas to user-defined polygons (including circles and drive-time polygons). For most areas, the application provides a good estimate for the polygon. If the relationship between the underlying blocks and the parent block groups has changed

significantly since 2010, the estimate cannot incorporate that change unless both blocks and block groups are updated.

Esri, the global leader in geographic information system (GIS) software, offers the most powerful mapping and spatial analytics technology available.

Since 1969, Esri has helped customers unlock the full potential of data to improve operational and business results. Today, Esri software is deployed in more than 350,000 organizations including the world's largest cities, most national governments, 75 percent of Fortune 500 companies, and more than 7,000 colleges and universities. Esri engineers the most advanced solutions for digital transformation, the Internet of Things (IoT), and location analytics to inform the most authoritative maps in the world. Visit us at esri.com

About Esri's data development team

Led by chief demographer Kyle R. Cassal, Esri's data development team has more than a 40-year history of excellence in market intelligence. The team's economists, statisticians, demographers, geographers, and analysts produce independent small-area demographic and socioeconomic estimates and forecasts for the United States. The team develops exclusive demographic models and methodologies to create market-proven datasets, many of which are now industry benchmarks, such as Tapestry™ Segmentation, Consumer Spending, Market Potential, and annual Updated Demographics. Esri® Demographics power ArcGIS® through dynamic web maps, data enrichment, reports, and infographics.
