

Connecting your Chromebook to WIFI

Our school Chromebooks are designed to work completely cloud based meaning anyone with an @ssk12.org can login, to make this happen you need to be connected to the internet.

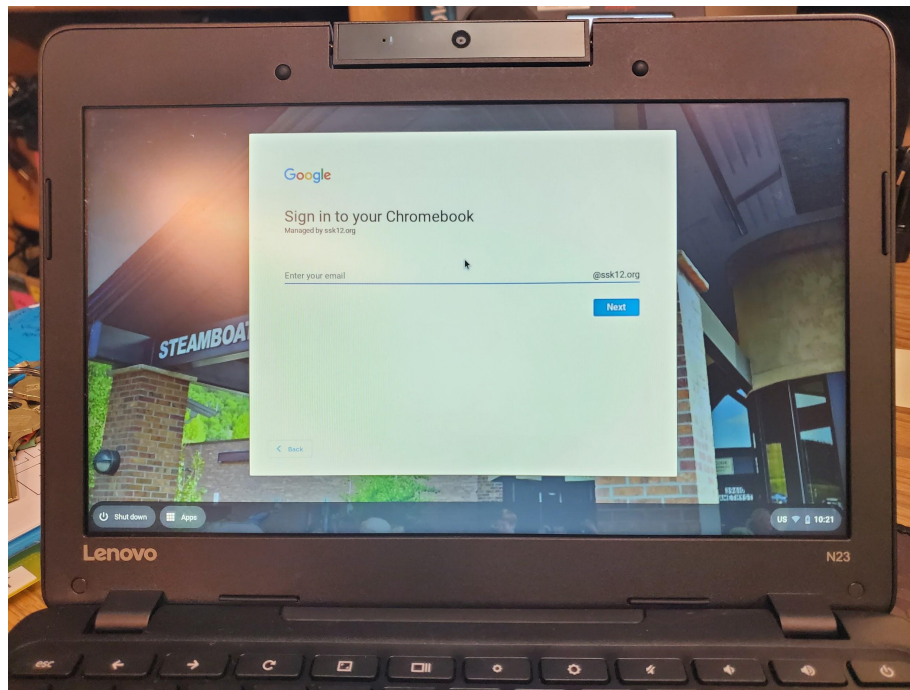

Our School chromebooks are a little bit different, they are all pre configured to connect to our School WIFI Network “SSSD” So at home this can be a little challenging because you don't have a network named “SSSD”. Here are the steps to login to your chromebook at home.

1. When you turn on your device, you may Select your WIFI network and enter your wifi password every time. Otherwise if you have signed into your chromebook already you may select “sign in as an existing user.”

2. Then Sign in as you normally would. *Remember if you haven't signed in to your chromebook already this will not work. Your device must be connected to your internet first before you can login with a different account or for the first time.

Connecting your Chromebook to WIFI

3. Once you have signed into your chromebook with your account. Your chromebook will automatically connect to your WIFI network if you have previously configured it.
