Center for Innovation Comes to Life

Bolles senior Hailey Christy worked with instructional technology specialist Gloria Wood to design a 3D model of the Center for Innovation, currently under construction on the Upper School San Jose Campus. She used Fusion 360 to design the 3D model from scratch, based solely on the 2D renderings of the 47,000-square-foot, three-story building.

"Hailey is a curious, responsible, exceptionally helpful young lady," Wood said. "She spent countless hours learning how to use the Fusion 360 program in her free time and on the weekends. We are immensely grateful to her for sharing her talents with the School community."

The school administration uses Christy's scaled-down model to communicate the building design and its impact. Construction on the Center for Innovation is projected to finish in Spring 2024.
