Google Chrome lets you manage which individual sites can have access to your microphone and camera. If you don't see any video or the mic isn't picking up voice, you might need to change the permissions Chrome is giving to a site.

#### How to Change a Site's Permissions in Chrome

For security purposes, Chrome prompts you any time a site requests access to your microphone or webcam. If you accidentally clicked "Block" the first time you saw the prompt, or you just want to revoke the permissions you previously gave, this document will show you how to manage those settings.

Knowing how and where to access the settings related to a site's permissions to your computer's hardware is important in case you ever change your mind as to what a website is allowed to use.

There are basically two ways to manage the permissions for microphone and webcam to a site: from the Omnibox or inside Chrome's settings.

### Change a Site's Permissions From the Omnibox (URL/Search bar)

This method works when you've already set the permissions for the microphone or camera and want to change them while visiting that particular site.

Go to the website for which you want to change the permissions and click the lock icon on the leftmost side of the Omnibox.

From the menu that appears, click either the microphone or camera, then from the drop-down menu, select "Allow" or "Block," then click the X to save your changes.

After saving your decision, you will have to reload the page for the changes to take effect.

When a site has access to your microphone or camera, an icon will appear in the Omnibox on the right side. If you click this icon, you can always choose to block access or to continue allowing the site to have access. Again, you must reload the page for any changes to take effect.

#### How to View Permissions From Chrome Settings

To view your microphone and camera permissions from Chrome's settings, click the menu icon, and then click on "Settings."

# Once inside Content Settings, click on either "Microphone" or "Camera" to adjust its permissions.

Although you can't manually add a site to the allow or block list from Settings, you can see a list of every site you've allowed or denied access to on this page. Then to remove items you've previously allowed or blocked access, all you have to do is click the trash can icon next to a site.
