Akron, Ohio

Construction

by Jim Mehing
Sherry Filing

1981 opened with new additions to Revere and continued with major renovations to the school. Although little will be completed at the end of the school year, the floor plans (below) illustrate the expected final results.

In the upper level floor plan, the old theatre will be formed into a new music department (A). It will include a choral practice room, offices, private practice areas, and a music library. Additional classrooms (B) will be affixed to the existing artroom area, thus expanding the art facilities and classroom space. Renovations will also take place within the science facilities. (C)

On the lower level plan, classroom renovations (A) will place in the lower hall, including addition of a C.O.E. room (B). The new Auditorium (C) will be a complete production center, including an outer lobby, storage rooms, and a seating capacity of 650. Finally, the physical Education Department will benefit from the addition of a 2 level building, the upper area being a multipurpose room, and the lower section containing 2 locker room areas including equipment rooms and offices.
