

The Treasurer recommends the purchase of 140 Ultra Books with port replicators as part of a teacher based technology pilot program whereas the cost for these devices is \$711.49 per device for a total of \$99,608.60 to be paid for by the General Fund, whereas this program is the first phase of an initiative designed to enhance the utilization of digital resources along with the integration of technology into the classroom, whereas each employee that is part of the pilot will enter into an agreement with the Board of Education committing to professional development in exchange for use of the Ultra Book, and be it further resolved that the current classroom computers used by the pilot teachers will be repurposed in an effort to reduce the cost associated with the Districts replacement cycle for technology.
