

CV Guarantee (Integrated Math 2/10th grade)

Big Idea: Algebraic and Geometric Relationships(Angle relationships, attributes of polygons, linear relationships)

Standard:

- G-CO.9. Prove theorems about lines and angles.
- G-CO.10. Prove theorems about triangles
- G-GMD.6 CA Verify experimentally that in a triangle, angles opposite longer sides are larger, sides opposite larger angles are longer, and the sum of any two side lengths is greater than the remaining side length; apply these relationships to solve real-world and mathematical problems.
- A-SS.1a Interpret parts of an expression, such as terms, factors, and coefficients.

- A-APR.1 Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.
- F-IF.4 For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship.

Timeline: Semester 1

Key Vocabulary:

- Corresponding angles
- Alternate Interior Angles
- Equilateral
- Right Angle
- Perimeter and area
- Scalene
- Isosceles
- Trapezoid
- Parallelogram

- Complementary angles
- Transversal
- Congruent angles
- Polygon
- Venn Diagram
- Square and rectangle
- Rhombus
- Pentagon

- Supplementary angles
- Same Side Interior Angles
- Parallel Lines
- Rigid transformation
- Obtuse
- Acute
- Kite
- Hexagon

Knowledge

- I can identify corresponding, alternate interior, and same side interior angles
- I know that supplementary angles are two angles that add to 180 degrees
- I know that complementary angles are two angles that add to 90 degrees
- I know what the names of different regular polygons are (up to six-sided shapes).
- I know the formulas for area and perimeter of a polygon.

Reasoning

- I can distinguish between different types of triangles.
- I can compare polygons using a Venn Diagram.
- I can interpret key features of graphs and tables of a function.
- I can distinguish the relationship between two quantities when given a function equation.

Performance Skills

- Given two parallel lines with a transversal, I can solve for missing angles
- I can write equations to solve for x, given an angle pair relationship.
- I can find the area or perimeter of a polygon (up to six sides).
- I can determine if a triangle can be drawn if given the three side lengths.
- I can sketch graphs of linear functions given a table.

Product Examples

- I can make diagrams with all types of angles labeled
- I can sort polygons by their attributes.
- I can classify triangles by their angles and sides.

Resources:

- CPM Integrated II Text, Desmos, Geometry Squad Curriculum, VOCAB: quizlet, kahoot

CV Guarantee (Integrated Math 2/10th grade)

Big Idea: Triangles: Congruency, Similarity & Dilations

Standard:

- G-SRT.5 Use congruence and similarity criteria for triangles to solve problems and to prove relationships in geometric figures.
- G-SRT.1a Verify experimentally the properties of dilations given by a center and a scale factor.
- G-SRT.1b Verify experimentally the properties of dilations given by a center and a scale factor.

- G-SRT.2 Given two figures use the definition of similarity in terms of similarity transformations to decide if they are similar; explain using similarity transformations the meaning of similarity for triangles as the equality of all corresponding pairs of angles and the proportionality of all corresponding pairs of sides.
- G-SRT.3 Use the properties of similarity transformations to establish the AA criterion for two triangles to be similar.

Timeline: Semester 1

Key Vocabulary:

- Congruent
- Proofs- 2column proofs
- Dilations
- Scale Factors

- Congruence statement
- Ratio
- Proportion
- Similarity conditions

- Congruence conditions
- SAS, SSS, HL, ASA, SAA, AA
- Image
- AA, SAS, SSS similarity

Knowledge

- I can describe rigid transformations
- I can name the congruence relationships for triangles.
- I know the characteristics of that the image shares with the original.
- I know the conditions for determining triangle similarity.

Reasoning

- I will construct viable arguments that prove triangles are congruent.
- I can recognize the converse relationship between conditional statements.
- I can investigate the relationship between the truth of a statement and its converse.
- I can critique other's reasoning as I work with similar triangle proofs.

Performance Skills

- I can use flowcharts to organize proofs of triangle congruence.
- I can prove the converse of a theorem.
- I can use a tool to dilate shapes and make use of structure to discover the properties of dilations.
- I can calculate unknown side lengths using a scale factor.
- I can organize my reasoning in a flowchart to diagram a multi-step argument.

Product Examples

- I can create a dilation of a picture at a given scale factor.
- I can create a proof to show two triangles are congruent.
- I can perform dilations to determine the missing side lengths of similar figures.

Resources: <ul style="list-style-type: none"> ● CPM Integrated II Text ● Desmos ● Geometry Squad Curriculum 			

CV Guarantee (Integrated Math 2/10th grade)

Big Idea: Conditional Probability and Applications (Honors Only)

Standard:

- S-CP.3. Understand the conditional probability of A given B as $P(A \text{ and } B)/P(B)$, and interpret independence of A and B as saying that the conditional probability of A given B is the same as the probability of A , and the conditional probability of B given A is the same as the probability of B .
- S-CP.4. Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities

- S-CP.5. Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations.
- S-CP.6. Find the conditional probability of A given B as the fraction of B 's outcomes that also belong to A , and interpret the answer in terms of the model.
- S-CP.7. Apply the Addition Rule and interpret the answer in terms of the model.
- S-CP.8. Apply the general Multiplication Rule in a uniform probability model
- S-MD.7. Analyze decisions and strategies using probability concept.

Timeline: Chapter 7.2 (5-7 days), 2nd semester

Key Vocabulary:

- | | | |
|--|--|---|
| <ul style="list-style-type: none"> ● Mutually exclusive ● Probability ● Addition Rule ● Sample space | <ul style="list-style-type: none"> ● Association ● Conditional probability ● Two way tables | <ul style="list-style-type: none"> ● Independent events ● Multiplication rule ● Outcomes ● Probability area model |
|--|--|---|

Knowledge

- I will begin to develop the concept of conditional probability.
- I will be able to understand and apply the vocabulary words listed above in the context of a problem

Reasoning

- I can connect my understanding of independence with the mathematical definition, and will compare independent events with mutually exclusive events.
- I can connect independence to the association of two variables
- I can determine if two categorical variables, presented in a two-way table, are associated.

Performance Skills

- I can calculate conditional probabilities from data arranged in relative frequency (probability) two-way tables as opposed to frequency (count) two-way tables.
- I will practice using both area models and two-way tables as methods for displaying probabilities.
- I can apply the multiplication rule
- I can apply independence to various situations

Product Examples

- I can complete a two way table
- I can complete a probability area model
- I can read a two way table and a probability area model to interpret and analyze data

Resources: CPM Integrated II Text, Desmos, Geometry Squad

CV Guarantee (Integrated Math 2/10th grade)

Big Idea: Polygons and Circles			
<p>Standard:</p> <ul style="list-style-type: none"> ● A-REI.7 Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. For example, find the points of intersection between the line $y = -3x$ and the circle $x^2 + y^2 = 3$. ● G-GPE.1. Derive the equation of a circle given the center and radius using the Pythagorean Theorem; complete the square to find the center and radius of a circle given by an equation. ● G-SRT.5 Use congruence and similarity criteria for triangles to solve problems and to prove relationships in geometric figures. 		<ul style="list-style-type: none"> ● G-C.2. Identify and describe relationships among inscribed angles, radii, and chords. ● G-C.5. Derive using similarity the fact that the length of the arc intercepted by an angle is proportional to the radius, and define the radian measure of the angle as the constant of proportionality; derive the formula for the area of a sector. <p>Timeline: Semester 2</p>	
Key Vocabulary:			
<ul style="list-style-type: none"> ● Graphing form of a circle ● General form of a circle ● Minor arc ● Major arc ● Parabola ● Semi circle ● Tangent line 	<ul style="list-style-type: none"> ● Arc ● Circumscribed circle ● Circumscribed angle ● Concentric circles ● Diameter ● Radius ● Incenter ● Inscribed angle 	<ul style="list-style-type: none"> ● Arc length ● Arc measure ● Center ● Central angle ● Chord ● Circle ● Circumference 	
Knowledge	Reasoning	Performance Skills	Product Examples
<ul style="list-style-type: none"> ● I can recite the formula for a circle ● I can understand the definition of a radian (Honors) ● I can know the difference between arc measure and arc length. 	<ul style="list-style-type: none"> ● I can determine the equation of a circle graphed on coordinate axes. ● I will learn that the perpendicular bisector of a chord passes through the center of the circle and will learn new circle-related vocabulary, such as major and minor arcs. ● I can observe the relationships between inscribed angles and the arcs that they intercept 	<ul style="list-style-type: none"> ● I can complete the square to write the equation of a circle in graphing form ● I can convert from radians to degrees ● I can complete the square to rewrite the equation of a circle from general form to graphing form ● I can derive formulas and use them to find arc lengths and areas of a sector 	<ul style="list-style-type: none"> ● Creating a circle/circles and labeling the majority of the vocabulary words listed above ● I can create a graph of a circle when given an equation in graphing form or general form
<p>Resources: CPM Integrated II Text, Desmos, Geometry Squad Curriculum</p>			

CV Guarantee (Integrated Math 2/10th grade)

Big Idea: Volume, Surface Area, and Ratios of Solids			
Standard: <ul style="list-style-type: none"> ● F-IF.7a. Graph linear and quadratic functions and show intercepts, maxima, and minima. ● G-GMD.1. Give an informal argument for the formulas for the circumference of a circle, area of a circle, volume of a cylinder, pyramid, and cone. ● G-GMD.3. Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems. 		<ul style="list-style-type: none"> ● G-GMD.5 Know that the effect of a scale factor k greater than zero on length, area, and volume is to multiply each by k, k^2, and k^3, respectively; determine length, area and volume measures using scale factors ● STANDARD <p>Timeline: Semester 2</p>	
Key Vocabulary:			
<ul style="list-style-type: none"> ● Volume ● Cylinder ● Cone ● Pyramid ● Apex ● Cube ● Edge ● Face 	<ul style="list-style-type: none"> ● Solid ● Sphere ● Surface area ● Prism (rectangular and triangular) ● Lateral face ● Lateral Surface area ● Ratio 	<ul style="list-style-type: none"> ● Similar Solids ● 3 dimensional ● Slant height ● Base ● Oblique cylinder ● Tetrahedron ● Regular polygon ● Perimeter 	
Knowledge	Reasoning	Performance Skills	Product Examples
<ul style="list-style-type: none"> ● I can identify, understand and use the above vocab words in context ● I can know the formula for volume and surface area of rectangular prisms ● I can understand that volume is the inside of a 3D shape and surface area deals with the outside of a 3D shape ● I can name 3D solids 	<ul style="list-style-type: none"> ● I can understand that the volume of a cylinder or prism remains constant if the solid is oblique ● Students will describe the features of a pyramid and name a pyramid by the shape of its base. ● I can justify that the volume of a pyramid is one-third of the volume of a prism with the same base and height, understanding that the volume does not change if the pyramid is oblique 	<ul style="list-style-type: none"> ● I can calculate the surface area and volume of non-rectangular prisms and cylinders ● I can calculate the surface area and volume of a sphere ● I can calculate the volume of a pyramid and ● I can compute the volume and surface area of a cone. ● I can solve application problems involving cones. ● Students will calculate the total surface area of a pyramid 	<ul style="list-style-type: none"> ● I can solve application problems and equations involving surface area and volume for 3D solids.
