

Engineering Career Cluster

The Engineering Career Cluster focuses on the planning, designing, testing, building, and maintaining of machines, structures, materials, systems, and processes using empirical evidence and science, technology, and math principles.

Electrical Engineering Statewide Program of Study

The Electrical Engineering program of study focuses on the design, development, testing, and supervision of electrical equipment and systems. Students will design, test, and evaluate projects related to electrical motors, radar, navigation systems, and communication systems. CTE learners will apply scientific, mathematical, and empirical evidence to solve problems in electrical systems, associated with instruments, facilities, components and equipment.
