

From Director's Desk

Dear Families,

We had an amazing first season of our ASPs. With the addition of K1 students from the beginning of the year, it was a busy one. Our students enjoyed trying new classes such as Bollywood Dancing, Japanese Culture and Art and Parkour. Please take a look at some of the highlights.

Regards

Francesca Marr

After School Program Director

Basic drawing

In multiple ASP sessions, the class delves into imaginative and representational drawing using a collaborative approach. They also explore basic concepts like lines and shapes to enhance their drawing skills. The class takes place in a calm and easygoing environment, perfect for winding down after a busy day.

Kinder craft

Kindercraft is a fun and creative space for your little ones to explore arts and crafts. We use simple and age-appropriate materials, letting their imaginations lead the way! Some of our recent activities have included book-making, finger painting, hat and headband crafting, jewelry making, and model crafting!

Program Highlights

Bollywood Masterclass

Bollywood dance at Karan's Masterclass is a hit this term! Students of all nationalities are grooving to Hindi tunes, mastering dance steps, and even singing along. The class bridges East and West with its unique style, welcoming everyone. As Diwali and Navratri celebrations unfold, dance becomes a festive highlight. Stay tuned for more classes coming in January 2024!

Spanish

K1 students at ASP Spanish dived into the world of Spanish language and culture, aiming to share daily activities and personal themes. From basic greetings to catchy songs, like "Los Pollitos Dicen," they're building vocabulary and comprehension skills. The journey includes exploring holidays and traditions through crafts like "Día de la Raza" and "Día de los Muertos.". The young learners had a blast while developing language skills.

Kinder Math

Our kindergarten mathematicians gather every Tuesday to explore the size and shape attributes of objects. They predict patterns and determine how shapes and objects can fit together. Students in each class are developing problem-solving skills, visual spatial abilities, and expressing creative mathematical thinking in various ways. Their favorite game? The chicken game!
