

# Guiteras Summer Math!

SCAN ME

Happy Summer!

What a great time of the year to make family memories, relax, unwind, reading books—and of course find fun, and creative ways to keep our students' math minds strong. We want our students to experience math this summer through math talk, seeing math all around them, solving puzzles, playing games, and engaging in activities that help support their love of math. Each grade will receive a choice board and activity log. They can also be found on the [BW Family Math](#) website (scan above). On each log, are activities that your child can do throughout the summer that will let them have fun while enriching their math skills (for K-2 students they may need some support). **Also, students will be able to access My Path this summer! If they do 15-20 minutes twice a week, log it!**

As your child/children take part in the activities (**2 per week!**) keep in mind these positive norms for math from Professor of Mathematics, Dr. Jo Boaler ([youcubed.org](#)):

**Everyone** can learn math.

Mistakes are **valuable**.

**Questions** are REALLY important.

Math is about **Creativity** and **Making Sense**

Math is about **Connections** and **Communicating**

**DEPTH** is much more important than **SPEED**.

Math class is about **learning**, not **performing**.

Math doesn't always have to happen through these activities. Math is where you let it be! Enjoy making new memories this summer while infusing math into your daily talks, play time, and summer adventures!

From your Guiteras Math Teacher,  
Ms. Millard
