

Bridges in Mathematics Grade 1

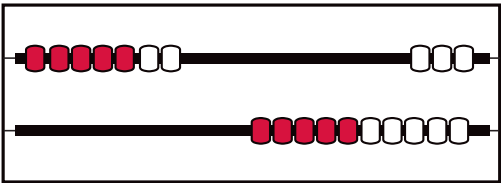

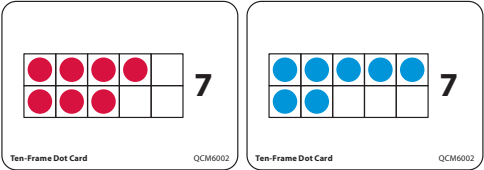

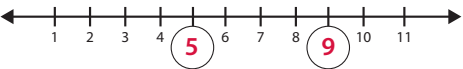

Unit 1: Numbers All Around Us

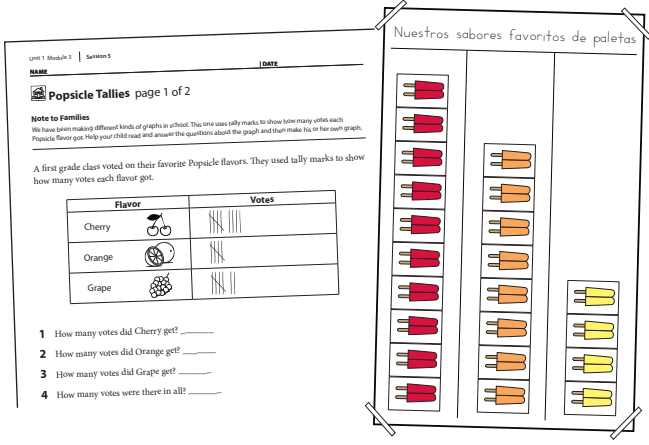

In this unit your child will:

- Quickly recognize how many objects are in a collection (up to 10), without counting from 1
- Identify 1 more and 1 less than a given number
- Explore number combinations that add up to 5 and 10
- Count by 1s, 2s, 5s, and 10s
- Make and read simple graphs using pictures and tally marks

Your child will practice these skills by solving problems like those shown below.

PROBLEM	COMMENTS
<p>Use the number rack to show 7.</p>  <p><i>"I used 5 red beads and 2 white beads. That makes 7."</i></p>	<p>The lessons in Unit 1 are designed to help students develop number sense. Students use number racks first to represent numbers and later for addition and subtraction. The number rack is a math tool made up of 2 strings of 10 beads; each string is broken into a group of 5 red beads and a group of 5 white beads. These groupings invite students to think in groups of 2, 5, and 10, rather than counting by 1s.</p>
<p>How many dots do you see? How many more dots are needed to make 10?</p>  <p><i>The number 7 shown two different ways on ten-frame cards.</i></p>	<p>The ten-frame, like the number rack, helps children make mental pictures of numbers in various ways. On the first card, students might see that 7 is made up of 4 and 3. Or, they might see 6 and 1 more. On the next card they might see 7 is made up of 5 and 2, or 4 and 3. Students begin to understand how two parts make a whole (the sum). By counting the empty boxes on the ten-frame, students can also see how many more are needed to make 10.</p>
<p>ex Show 4 on the ten-frame.</p>  <p>Now show 1 more.</p> <p>$4 + 1 = \underline{\quad 5 \quad}$</p> <hr/> <p>Study each number line carefully. Fill in the missing numbers.</p> <p>a</p> 	<p>Counting from 1 and then from any given number provides practice in adding 1 more. Counting backward provides practice in subtracting 1 less. Understanding this will help students recognize number relationships and help them count on to add (4 + 3 is 4... 5, 6, 7) and count back to subtract (8 - 2 is 8... 7, 6).</p>

PROBLEM	COMMENTS						
<p>Count how many tally marks there are in each column of the tally chart to answer the questions.</p>  <p>Flavor Votes</p> <table border="1"> <tbody> <tr> <td>Cherry</td> <td> </td> </tr> <tr> <td>Orange</td> <td> </td> </tr> <tr> <td>Grape</td> <td> </td> </tr> </tbody> </table> <ol style="list-style-type: none"> How many votes did Cherry get? _____ How many votes did Orange get? _____ How many votes did Grape get? _____ How many votes were there in all? _____ 	Cherry		Orange		Grape		<p>Students use graphs, tables, and tally marks to count, interpret, and discuss data. These graphic representations help students ask and answer questions about the information using mathematical vocabulary like <i>more than</i>, <i>fewer than</i>, and <i>equal</i>. Tally marks encourage grouping and counting by 5s, while sticks on a twin-pop encourage counting by 2s.</p>
Cherry							
Orange							
Grape							

FREQUENTLY ASKED QUESTIONS ABOUT UNIT 1

Q: Why do some of these activities look like what my child did in kindergarten?

A: This unit reviews mathematical concepts explored in kindergarten while introducing and establishing routines that will be used in first grade. This review helps teachers assess students' skill level and plan future lessons in the days and months to come. Time spent on learning expectations and procedures is essential—it helps build a cooperative community of learners where students work together to build mathematical concepts.
