

Topic: Science Second Grade Earth's Changing Surface

Days: 44

Subject(s):

Grade(s):

Key Learning: Earth contains many natural resources that people can use to meet their needs.

Unit Essential Question(s): **What are natural resources? How can they be used to meet our needs?**

Concept:

Earth Materials and Systems

Concept:

The roles of water in Earth's surface processes

Lesson Essential Question(s):

How can we investigate how wind and water can move Earth materials from one place to another and change the shape of landforms? (A)

How can we obtain and share information about how landforms provide homes for living things? (ET)

Lesson Essential Question(s):

How can we obtain and communicate information that water exists in different forms within natural landscapes and determines the variety of life forms that live there? (ET)

How can we investigate how wind and water can move Earth materials from one place to another and change the shape of landforms? (ET)

Vocabulary:
landforms

Vocabulary:
natural landscapes

Additional Information:

Rock - Hard, non-living thing that comes from the Earth

Resource - Anything people can use or something they need

Boulder - Large rock

Natural resource - Something found in nature that living things use to meet their needs

Sand - Tiny pieces of rock

Transportation - Ways people move themselves or other things

Soil - Loose top layer of the Earth's surface
