

"It was fun to see the kids put into practice that which they had read about and worked with. That's when I knew we were on to something — to see the smiles, to hear how much fun they were having."

— Chad Thurman, 7th-8th grade STEM teacher

CAREER ADVENTURES

➡ *discover your future!* ➡

9-week career exploration electives that inform
and inspire middle schoolers!

"I loved how Career Adventures was very innovative and had a lot of hands-on activities. We actually got to go out and fly drones and even build drones."

— Aiden Brandman, 8th grader

9-week, inquiry-based career exploration electives that inform and inspire middle schoolers in project-based modules specifically designed to build career awareness as well as foundational knowledge and career skills.

Each student-facing course is structured with a foundations module, an interview module, and three pathway modules. Students self-select one of the three pathway modules for completion. Coursework incorporates research and critical thinking skills within engaging career centric, project-based learning experiences.

Student-centered course work allows teachers to:

- implement multiple courses simultaneously
- offer course work as an independent study
- offer course work as gifted intervention
- offer course work as a science elective
