Executive Summary

Membership

Jeffco Schools saw a decrease of 1,394 students in the 2022-23 school year falling from 78,486 students to 77,092 students, representing a 1.8% decrease. Over the last 10 years, membership has decreased by 8,919 students (10.4% decrease). Factors for this decline in students for the 2022-23 school year is the continuing effects from the COVID-19 Pandemic, declining birthrate, Golden View Classical Academy leaving the district in 2018, and significant drops in kindergarten, 2nd grade, 5th grade, 7th grade, and 8th grade students. Charter School membership, as a percentage of Jeffco Schools, has grown from 8.8% in 2013-2014 to 12.0% in 2022-2023. This represents an increase from 7,595 to 9,215 students.

Membership Versus Enrollment

The Colorado Department of Education (CDE) defines membership as the number of students actively enrolled in grades PK-12 as of the October 1 count day. Enrollment is defined as the number of students for which CDE calculates funding. For the purpose of this report, membership numbers are used.

COVID-19 Pandemic (Year 3)

The COVID-19 Pandemic began to widely affect the United States in March 2020, and it still had major effects on membership in 2022. The pandemic has led to a decrease of 6,970 students in Jeffco for the past three school years. School districts nationwide have had to offer different styles of teaching to deliver instruction to students, such as virtual classrooms, in-person learning with smaller class sizes, and hybrid teaching.

The district experienced a decrease in Pre-K and K students from the 2021-22 school year. The Pre-K and K loss totaled 333 students. The district saw major losses in membership for 2nd grade, 5th grade, 7th grade, and 8th grade, which was 1,085 total students. The district saw an increase in the number of students in homeschool programs, students leaving for more robust online programs at other Colorado school districts, and students leaving for private schools.

Population Growth and Live Births

The Colorado State Demography Office estimates a population decline of 3,321 or -0.6%, in Jefferson County since the 2020 Census. Colorado ranks very high as a retirement location, and the median age in Jefferson County held steady from last year while the average household size and the average family size decreased slightly.

In Jefferson County, the number of live births increased in 2021. There were 86 more births in 2021 compared to 2020. Since 2007, there has been an overall decline of 720 live births or about a 11.5% decline.

Housing

Total housing permits, including both single-family and multi-family, decreased from 2,515 permits in 2021 to 2,206 permits in 2022, a decrease of 12.3%. Foreclosures in Jefferson County have increased to 368 in 2022 after declining since 2012, reaching a ten-year low of 97 in 2021.

The most significant growth is occurring in the northern area along the Indiana Street corridor north of West 64th Avenue. There is also growth along Highway 93 from Golden to Highway 72. The central areas of Lakewood, Wheat Ridge, and Arvada have smaller infill housing projects, but nothing significant that would impact membership. Referrals from the various municipalities and the county indicate a demand for housing and mixed use projects. Future growth is expected in the Rooney Valley area and the Ken Caryl area based on recent referrals.

Regional Opportunities for Thriving Schools (Phase I)

Regional Opportunities for Thriving Schools is Jeffco Public Schools' response to the Board of Education's (BoE) request for a comprehensive plan to ensure thriving schools and extraordinary student experiences across our district.

On August 25, 2022, Jeffco Public Schools staff made a recommendation to the Board of Education (Board) for school closures and consolidations effective for the 2023-24 school year. On November 10, 2022, the Board voted on and passed the resolution. The affected schools are listed below:

Closing ES	Receiving ES	Closing ES	Receiving ES
Emory	Lasley	Glennon Heights	Belmar
Peck	Secrest	Parr	Little
Thomson	Swanson	Sheridan Green	Ryan
Campbell	Fremont/Vanderhoof	Witt	Lukas
Peiffer	Kendallvue	Vivian	Stober
Colorow	Powderhorn	Wilmore-Davis	Stevens
Green Mountain	Foothills	Kullerstrand	Prospect Valley
Molholm	Lumberg	Bergen Meadow	Bergen Valley (2024-25)

Pre-K Placements

As of this publication, new Pre-K programs or additional Pre-K classrooms will be implemented for the 2023-24 school year at these locations: Adams, Anderson, Campbell, Columbine Hills, Eiber, Governor's Ranch, Green Gables, Kendrick Lakes, Lumberg, Maple Grove, Marshdale, Meiklejohn, Mt. Carbon, Normandy, Patterson, Powderhorn, Semper, Shelton, Sierra, Slater, and Weber.

Conclusion

Projections for the 2023-24 school year show an overall decrease of 1,931 students. Charters are projected to increase by 9 students with a loss of 1,940 for district-run schools. A number of factors continue to impact membership growth: economic influences, low birth rate, the inability of established neighborhoods to 'turn-over' to younger families, affordable housing, smaller family size, fewer school-age children, and multi-generational households. Other issues could affect membership next year, such as new start times and ROFTS Phase I closures. In addition, the COVID-19 Pandemic has decimated student memberships at public schools nationwide, and it is yet to be seen if there will be any lasting, long-term effects from the pandemic. While some areas of the district remain statistically flat or show signs of declining membership, one area of the district shows growth. The north area of the district has shown an increase in student growth over the past five years; it is projected that this upward trend will continue, but at a slower rate than originally anticipated.

Large developments in the north and in the Rooney Valley and Ken Caryl areas are projected to bring in significant numbers of school-aged children. Along with these major developments, Jefferson County is seeing growth within some neighborhood pockets. As a result of growing demand for housing, residential building permits have continued to remain high.

The statistics show a need to recognize pockets of inadequate capacity in existing schools. This report does not factor in new permanent square footage that may be needed to accommodate areas of the district experiencing significant growth. Sixth grade transitions have had an impact on the membership at the elementary schools, while middle schools have seen an increase in total membership due to the addition of 6th grade programs. Some Articulation Areas show drops in membership in the transition grade between 8th & 9th for 9-12 programs and 6th & 7th for 7-12 programs.

Utilization and Membership Trends

Utilization

Jeffco Schools continues to optimize utilization of its facilities. Appropriately-utilized schools allow for full programs by maximizing the number of students that can participate. Under-utilized facilities struggle with adequate funding to support full program offerings, and therefore may not be able to offer students the same educational experience as optimally-utilized schools with the same or similar programs.

Over-utilized schools can create their own set of issues, such as crowded classrooms, not enough elective slots to accommodate all students who wish to participate, placing classrooms in temporary buildings, extending lunch periods, etc.

Membership Trends

Several Articulation Areas have historical and projected membership trends that will require additional study to determine how the various demographic, economic, social, and educational offerings may be affecting schools within each of the Articulation Areas.

Membership trends are considered to decrease if the difference in the five-year membership count for historic or projected falls below 100 students, to increase if the difference in the five-year membership for historic or projected rises above 100 students, and flat if the difference in the five-year membership for historic or projected remains between zero and 99 students gained or lost.

Articulation Areas with Historical and Projected Flat and/or Decreases in Membership:

Articulation Area	Historic 5-Year Trend	Projected 5-Year Trend
Alameda	Decrease	Decrease
Arvada	Decrease	Decrease
Arvada West	Decrease	Flat
Bear Creek	Decrease	Decrease
Chatfield	Decrease	Decrease
Columbine	Decrease	Decrease
Conifer	Decrease	Flat
Dakota Ridge	Decrease	Decrease
Evergreen	Decrease	Decrease
Golden	Decrease	Decrease
Green Mountain	Decrease	Flat
Jefferson	Decrease	Decrease
Lakewood	Decrease	Flat
Pomona	Decrease	Decrease
Standley Lake	Decrease	Decrease
Wheat Ridge	Decrease	Decrease

Membership Trends (Cont.)

Articulation Areas with Historical Increases and Projected Increases in Membership:

Articulation Area	Historic 5-Year Trend	Projected 5-Year Trend
Ralston Valley	Increase	Increase

Charter Schools Historical and Projected Membership:

Articulation Area	Historic 5-Year Trend	Projected 5-Year Trend
Charters	Decrease	Flat

Membership Projection Methodologies

Tracing the landscape of the country's public school membership over the past fifty years reveals demographic, economic, and social changes. The United States as a whole continues to undergo major shifts in public student membership, due in large part to past events including the baby boom, the availability and use of birth control, and the development of suburbs. The baby boom of the late 1940s and 1950s was followed by the baby bust of the 1960s and 1970s. This gave rise to the echo baby boom of the 1980s, producing children who are now adults.

Nationwide, districts are experiencing the effects of the echo baby bust of the 1990s. From the 1950s to the 1970s, a dramatic downsizing of the family unit occurred. A direct result was the declining school membership of the 1970s and 1980s. As of the 2010 Census, the size of a family was at an all-time low of 3.14 persons. The live birth rate stayed relatively flat between 1997 and 2007, but the birth rate showed a descending pattern between 2008 and 2010. The birth rate between 2011 and 2020 declined at a much smaller percentage. The number of live births increased slightly in 2021.
Source: CDC, National Vital Statistics

When projecting future memberships, it is vital to track the number of live births, the amount of new housing activity, and the changes in household composition.

In addition, any of the following factors could cause a significant change in projected student memberships:

U.S. Live Birth Rate
per 1,000 Population

(Chart: Rate over years 1940–2020, labeled regions: Boom, Bust, Echo Boom, Echo Bust)
- Boundary Adjustments
- Sixth Grade Transitions into Middle Schools
- New School Openings
- Changes or Additions in Program Offerings
- Pre-School Programs

- Interest Rates and Unemployment Shifts
- Charter and Private School Offerings
- Zoning Changes
- Planned, but not built, Housing
- School Closures

Certain factors can be gauged and planned for far better than others. For instance, it may be relatively straightforward to gather housing data from local municipalities and builders regarding the total number of lots in a planned subdivision and calculate the potential student yield. However, planning for changes in the unemployment rate and how these may either boost or reduce public school membership proves more difficult. In any case, it is essential to gather a wide variety of information in preparation for producing membership projections.

When looking ahead at a school district's membership over the next two, five, or ten years, it is helpful to approach the process from a global perspective. For example: How many new homes have been constructed each year? How many births have occurred each year in relation to the resident population? Is housing experiencing a turnover? If so, what is the composition of families moving in or out? Are more or less students attending private schools, charter schools, or being home-schooled? What has the unemployment rate trend been over the past ten years? What new educational policies are in place now that could affect student membership figures?

The data sets generated from questions such as these have led to the development of five general methodologies to project future student memberships. They are as follows: Grade Progression Method (Cohort Survival Method), Regression-Based Forecasting Method, Housing Method, Land Saturation Analysis, and Migration / Change in Household Composition.

The Cohort Survival Methodology is often used to answer these questions and is a standard throughout the educational planning industry. The membership projections provided in this report were primarily developed using the cohort survival method with influences from the other methodologies mentioned herein.

Grade Progression Method (Cohort Survival Method)

A cohort is a group of persons (in this case, students). The grade progression projection methodology uses historic live birth data and historic student memberships to "age", or progress, a known population or cohort throughout the school grades. For instance, a cohort begins when a group of kindergarteners enrolls in grade K and moves to first grade the following year, second grade the next year, and so on.

A "grade progression ratio" is developed to track how this group of students grew or shrunk in number as they moved through the grade levels. By developing grade progression ratios for each grade transition (i.e. 2nd to 3rd grade) over a ten-year period of time, patterns emerge and can be folded into projections by using the grade progression ratios as a multiplier. See page 16 for detailed Jeffco School survival ratios.

Time

Grade

2012
Kindergarten

2013
First Grade

2014
Second Grade
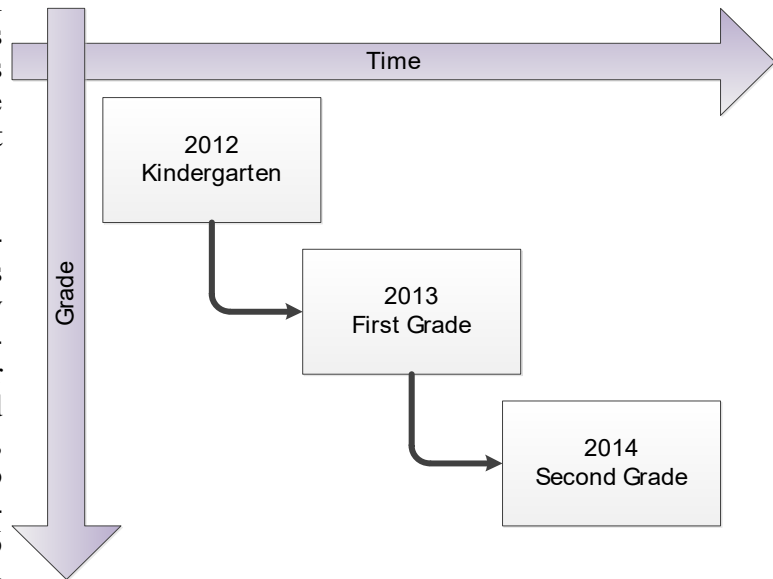

For example, if student membership has consistently increased from the 8th to the 9th grade over the past ten years, the grade progression ratio would be greater than 100% and could be multiplied by the current 8th grade to develop a projection for next year's 9th grade. This methodology can be carried through to develop ten years of projection figures. Because there is not a grade cohort to follow for students coming into kindergarten, live birth counts are used to develop a grade progression ratio. Babies born five years previous to the kindergarten class are compared in number, and a ratio can be developed to help project future kindergarten memberships.

The grade progression method is useful in areas where population is stable (relatively flat, growing steadily, or declining steadily) and where there have been no significant fluctuations in membership, births, and housing patterns from year to year.

Regression-Based Forecasting Models

There are several regression-based forecasting methods that may be used in conjunction with the grade progression method to increase the accuracy of membership projections. In regression-based forecasting, it is useful to determine which variables are affecting the district membership history and use these variables in the regression calculation. For example, it may be beneficial to study the neighborhoods to determine if they are growing, stable, or declining in number of school-age children, as well as examine live birth rates, building and occupancy permits, transportation plans, and land use plans. Depending upon which environmental variables are used, a "line of best fit" is determined historically and then projected into the future.

Housing Method

Membership projections can also be determined by analyzing the housing data for the areas that make up a school district. Yield factors can be established by comparing the historic change in membership from year to year divided by the total number of building or occupancy permits issued. For example, if student membership has increased by approximately 100 students each year and approximately 200 building permits have been issued each year for the past ten years, then the yield factor would be approximately 0.5 students per building permit (see detailed Jeffco Schools yield rates on page 18).

Once yield factors are established, the number of new students per year can be estimated by multiplying the yield factor by the number of projected new housing units. This method is effective when the rate of student membership far exceeds the live birth rate.

Change In Enrollment

Housing Permits Issued
If housing demolitions are occurring in a district, these must also be taken into account. For instance, if housing demolitions/withdrawals have increased rapidly over recent years while new housing starts have remained relatively constant over many years, the conclusion may be that some of the new housing starts will simply be replacements for the families displaced by the demolitions. Of course, housing value and household composition would need to be further analyzed to confirm that this is indeed the case. It is possible that membership may remain flat or even decline even though there may be new housing occurring in the area.

Land Saturation Analysis
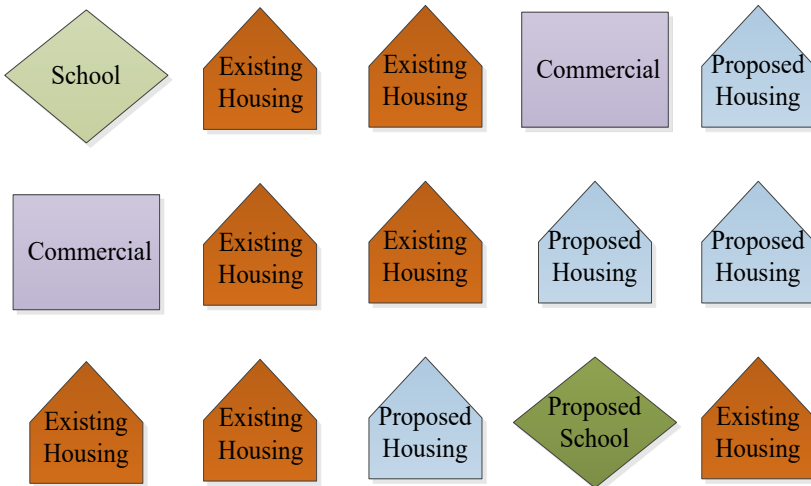

Housing data also drives the land-saturation analysis membership methodology. In areas where there is a high rate of development and the future development patterns in the area are clear, a "build-out" scenario can be developed. The scenario takes into consideration the remaining acreage to be developed, planned rate of completion, zoning policies, density per acre, type of housing, and ratios of school-age children per household type. This method is particularly useful in areas experiencing rapid growth such as the Indiana Street corridor.

Migration / Change in Household Composition

Geographic Information Systems (GIS) technology allows our school district to quickly analyze countless data sets including birth data, housing information, and membership statistics. When paired with membership projections, GIS becomes an invaluable information-management and decision-making tool.

Through a process called geocoding, the student database electronically places each student on a map. School facilities, district boundaries, feeder patterns, and attendance boundaries are also mapped. Unlike a paper map where "what you see is what you get," a GIS map is a combination of many layers of information. The information comes from different databases, data sets, and tables, which are linked in the GIS.

Membership for individual schools or regions are analyzed to depict:
- Students who live and attend in boundary
- Students who live in, but attend out of boundary
- Students who live out, but attend in boundary

Population and housing demographics from the Census and local sources are overlaid in the GIS in order to analyze trends in different areas of the district. Population projections by age and housing growth projections can be examined to guide decision making for future facilities. In addition, if multiple years of data are available (i.e., 3-5 years historic), student migration can be mapped to determine where students are moving within the district.
The change in household composition over time is one of the most difficult factors to predict. Neighborhoods often go through cycles of newer homes housing younger families. As the families remain in the neighborhood, students become older and eventually the home becomes an "empty nest." At some point, the housing unit is sold and a new family moves into the home. As simple as it may seem, it is extremely complex to track the turnover of housing units, an effort not conducted in this study.

The membership projections provided in this report were developed by a combination of all of the methodologies, to some extent, described in the preceding pages. In addition, review sessions were held with representatives from Facilities, Budget, School Effectiveness, and Instructional Data Reporting. Because membership projections are both an "art" and a "science", they require multiple data sets as well as review and input from District personnel to determine the most likely estimate of student population in the future.

Census and Demographic Data

According to the US Census Bureau, the population in Jefferson County increased from 527,056 to 534,543 or 1.4% between the 2000 and the 2010 Census. The 2020 Census shows a population increase of an additional 48,367 residents from 2010, or 9.1%, between 2010 and 2020. In 2021, the estimated population of Jefferson County has declined 0.6% or about 3,329 residents.

In terms of school-aged children (5-19), the population decreased by 11,142 or 9.8% between 2000 and 2010, with another drop of 18,776 or 18.4% between 2010 and 2020. The year 2021 saw an increase of over 10,000 school-aged kids or a gain of 12.7%. The under age 5 population continues to decrease, indicating that the number of students in Jeffco will most likely decline or stay relatively flat until pockets of proposed development are realized.

The median age of a Jefferson County resident has declined slightly since 2010.

In terms of race, Jefferson County is still predominately white. The percentage of all races and nationalities has changed since 2010, since the 2020 Census asked questions regarding race differently.

In conjunction with a relatively flat median age, the average household size and the average family size decreased slightly from 2020.

The number of total housing units increased 2,487 units from 2020, and the number of vacant housing units increased from 2020 by 340 units.

The table shown here provides a comparison of the 2000, 2010, 2020, & 2021 US Census data for Jefferson County, Colorado.

United States Census Data *Jefferson County, CO*				
Subject	**2000**	**2010**	**2020**	**2021**

Jefferson County Demographic Data

The table below breaks down the Jefferson County population by municipality, which is slightly different from the U.S. Census data. The change in population is greatest in Arvada, Lakewood, and the unincorporated areas of the County. The rest of the County is seeing a steady but relatively less dramatic increase in population, with some areas declining since 2010.

Jefferson County Population Estimates

Area	2010	2020	2021	Change from 2010	Change from 2020
Arvada (part)	103,924	121,510	120,302	16,378	(1,208)

Birth Data

Utilization of live birth data is recommended when projecting future kindergarten memberships. This data provides a helpful overall trend. Large bubbles in birth counts, either up or down, can be planned for or anticipated by the District. The live birth counts are used to determine a birth-to-kindergarten grade progression ratio. This ratio identifies the percentage of children born in a representative area who will attend kindergarten in the District five years later.

Birth counts are different from birth rates. The birth count is simply the actual number of live births. A birth rate is the number of births per 1,000 individuals in a specified population group. Data is arranged by the residence of the mother. For example, if a mother lives in the Green Mountain area but delivers her baby in Denver, the birth is counted in the Green Mountain area.

Since 2007, the number of births within the District has remained fairly consistent, averaging around 5,751 births annually. In 2020, the lowest number of births (5,464 births) was recorded over the 15 year time span. Jefferson County has seen a small increase of 86 births from last year.

Live Birth Counts in Jefferson County - by Articulation Area

Source: Heath Statistics Section of the Colorado Department of Public Heath and Environment

The following graph illustrates the pattern that can be seen between birth data and kindergarten and first grade membership 5 and 6 years later. This pattern at times directly correlates and at other times does not (especially beyond the 2006 birth year). This indicates that housing was probably a significant factor in the late 1990s and early 2000s, but moving forward, the trends in Kindergarten and 1st grade do not follow the birth rate trends as closely. The graph shows Kindergarten & 1st grade dipping below birth in 2021-22, which is a indicator of declining membership of younger school aged children.

Live Birth Counts
(Jefferson County)
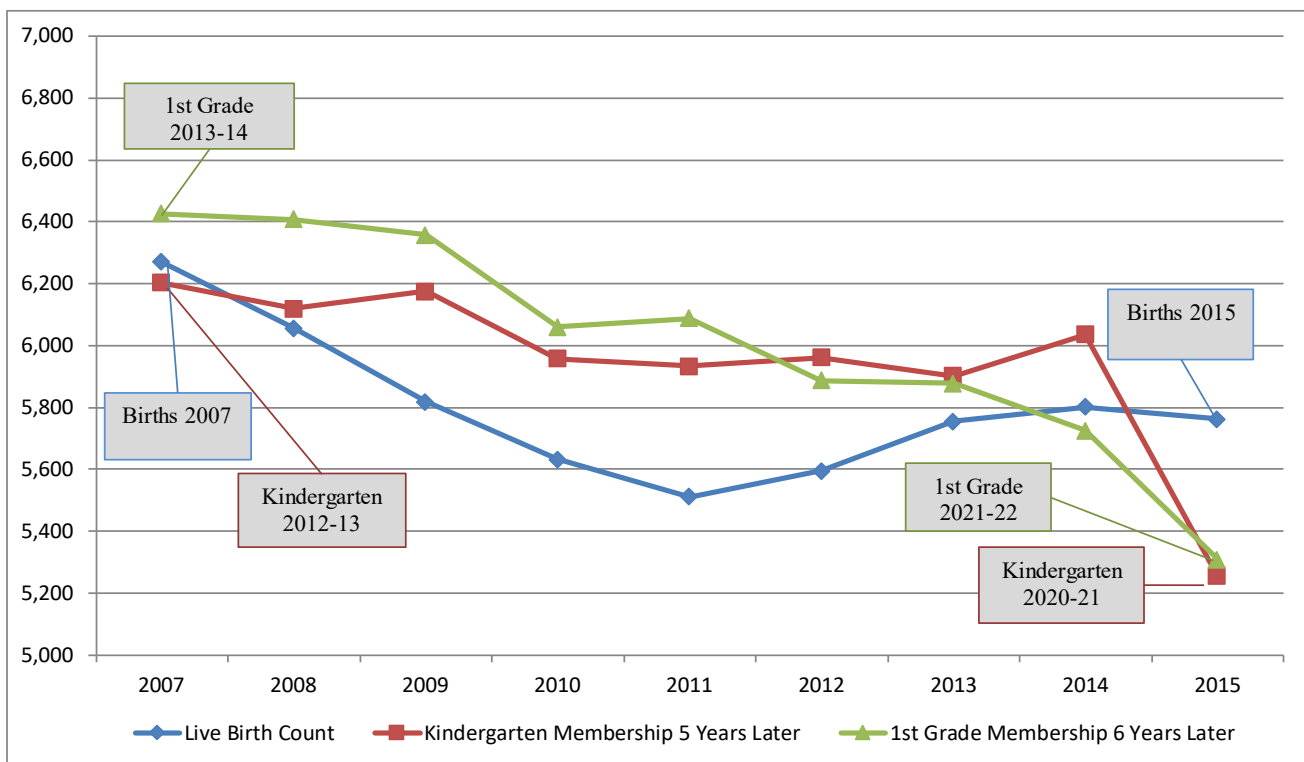

Survival Ratios

The table and graph below demonstrate the changes in membership as students move through the District. Percentages greater than 100 indicate that there are more students than there were in the previous grade the previous year. In other words, there was an increase in student population and new students were added to the district. Percentages less than 100% indicate that there was decline as students left the District.

Birth to Kindergarten: This ratio indicates the number of children born in the area who attend kindergarten in the District five years later. Percentages less than 100% result from movement out of the District or attendance at a non-public school.

The following table illustrates the historical survival ratios for Jeffco Schools since 2013 by grade.

Survival Ratios

From	To	Birth -> K	K -> 1	1 -> 2	2 -> 3	3 -> 4	4 -> 5	5 -> 6	6 -> 7	7 -> 8	8 -> 9	9 -> 10	10 -> 11	11 -> 12

Source: Jefferson County Public Trustees Office

As the graph below illustrates, we see an increasing number of buildings permits for single-family and multi-family units from 2012 to 2014. In 2015, permits fell below 2,000 total permits. In 2016, single-family permits rose to 1,510 permits issued, and multi-family permits increased to 1,100 permits issued. In 2017, we see a slight decline of total permits, but there is an increase in multi-family housing from the previous year. Permits declined in 2018 and 2019 for both single-family and multi-family housing, but have increased again for both housing types in 2020 and 2021, mostly for multi-family housing. The year 2022 saw a decline in multi-family building permits, and single-family permits remained consist with 2021. Usually, when comparing the historic change in membership by grade level from year to year, divided by the total number of building units, housing yield rates can be determined. However, in Jefferson County, although new housing is occurring, there is still a decline in student population in some grades and in some areas.
It is likely that the multi-family building permits over the last few years can be attributed to apartments, condominiums, and even retirement villages that are not producing significant numbers of students. It is also possible that the new housing is yielding significant numbers of students, but it is not offsetting the number of students leaving the District as homes become "empty nests" or parents choose an alternative educational option.

The table below illustrates the housing yield factors resulting from the change in Jeffco membership compared to the number of building permits issued for the last 3 years. As a negative yield factor is not realistic, (new housing may not result in large amounts of students, but it cannot result in a negative amount of students) a straight housing methodology was not utilized to develop the projections in this report. However, housing data and future development was considered when developing individual school projections.

Membership Projections by Articulation Area

The following pages include historical and projected membership by articulation areas and by individual schools. Individual schools and articulation areas may show projected increases or decreases, but membership overall is forecasted to decrease district wide over the next five years, with the majority of growth occurring in the Charter Schools and the Ralston Valley Articulation Area. Membership fluctuates depending on local demographics and housing data. The following chart summarizes the estimated increase or decrease in membership by articulation area over the next five years as well as the actual change in membership during the previous five years.

Articulation Area	Past 5 Year Change	Past 5 Year Trend	5 Year Projected Trend	5 Year Projected Change

District Wide - *Historical Membership*

Total membership decreased by 8,919 students over the last ten years (-10.4%). Over the last year, District Wide membership decreased by 1,394 students (-1.8%). District-managed schools have decreased their membership by 8,491 over the past five years, and charter schools have decreased their membership by 548 over the same period.

Alameda Articulation Area - *Historical Membership*

The Alameda Articulation Area decreased by 1,640 students over the last ten years (-38.1%). Some of this decline is due to Kendrick Lakes ES moving from the Alameda Articulation Area to the Bear Creek Articulation Area in 2017-18.

Projected Membership

Arvada Articulation Area - *Historical Membership*

The Arvada Articulation Area decreased by 2,112 students over the last 10 years (-40.2%). Some of this decline is due to Foster ES moving from the Arvada Articulation Area to an Option School in 2020-21 and Fitzmorris ES closing at the end of the 2021-22 school year.

Option Schools - *Historical Membership*

Option Schools increased by 1,618 students over the last 10 years (42.7%). This growth is due to Free Horizon switching from a charter school to option school in 2018-19, Foster ES becoming an option school in 2020-21, and more students enrolling in the Jeffco Virtual and new Remote Learning program during the pandemic.

Articulation Areas and Charter School Comparisons

The following comparisons illustrate the percentage of charter schools to neighborhood schools by articulation area. Only those articulation areas with charter schools located within their articulation boundaries are shown. Options, Specials, and Alternative Schools are not included in these comparisons.

Alameda, Arvada, Arvada West, Bear Creek, Evergreen, Standley Lake, and Wheat Ridge Articulation Areas currently have charters that enroll more than 10% of students within their articulation areas.
