# Installing PowerSchool for Parents and Students

- PowerSchool has a mobile app available for download on the Apple App Store for iPhone, iPad, or iPod tough as well as Google Play for Android devices. The app allows for easy real-time viewing of student progress on grades and assignments, attendance, school announcements, and more.
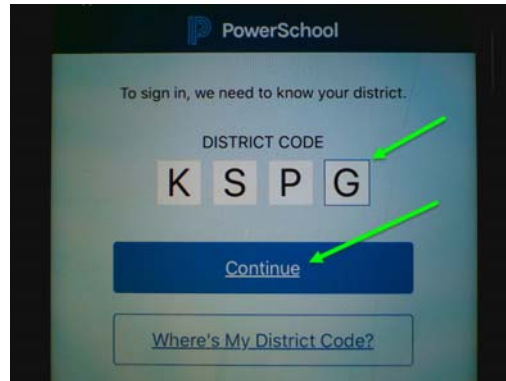

## Installing app on an iOS device

1. Search for PowerSchool through the App Store. Once you find the app, tap the "**Get**" and/or download icon option for the app. Once the app starts to install, you will see the progress of the app installation.

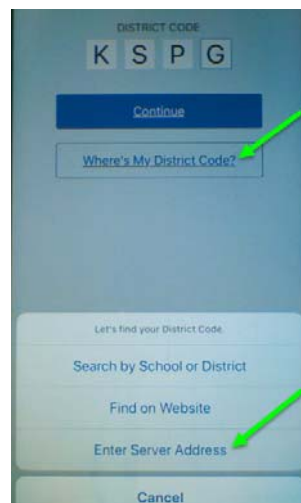

2. The app installation will be complete when you see the **"OPEN"** option listed by the app name. Tap the **OPEN** to launch the app.
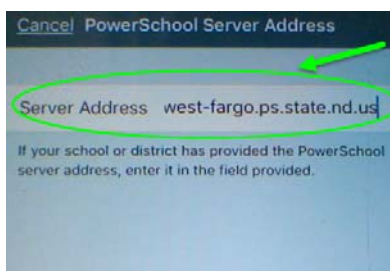

3. The district code for students and parents is **"KSPG"**, which you may enter and then tap **Continue**. If the code does not work to locate the West Fargo School PowerSchool system, there is an alternative method to locate the West Fargo PowerSchool system explained below.

4. Tap on the **"Where's My District Code?"** message. At the bottom of the screen tap on the **"Enter Server Address"** message.

5. On the next screen under the "PowerSchool Server Address" message, type in the box the full PowerSchool server address: **https://west-fargo.ps.state.nd.us** and then tap Continue.

6. Once the server is found a message may display prompting **"District Location"** and "Is your School district in Canada" which you would tap "**No**".

7. After that message you will see the student or parent login screen displayed. From this screen you will enter your PowerSchool **username** and **password,** then tap **Go** on the keypad to login.
