

Teacher Guide

Hi there,

Thank you for reading the Quizalize teacher guide.

This guide will show you just how quick and simple it is to make a super-engaging classroom quiz game on any topic.

First we'll set up a quiz.

Then we'll assign it to a class.

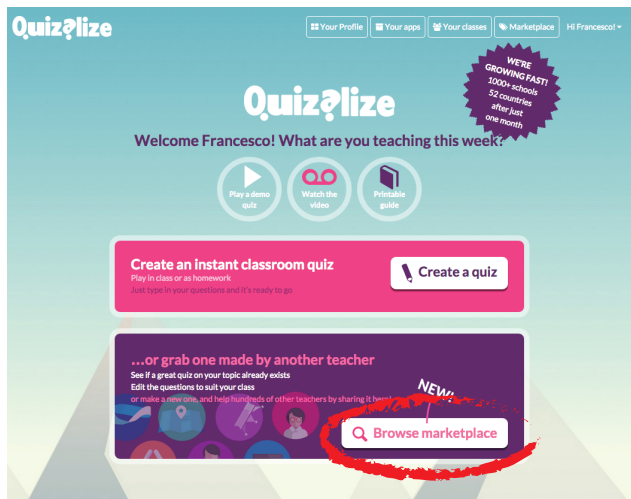

And finally we'll have a look at the live dashboard and reports which show who needs help and what they need help with.

Set up a quiz

1

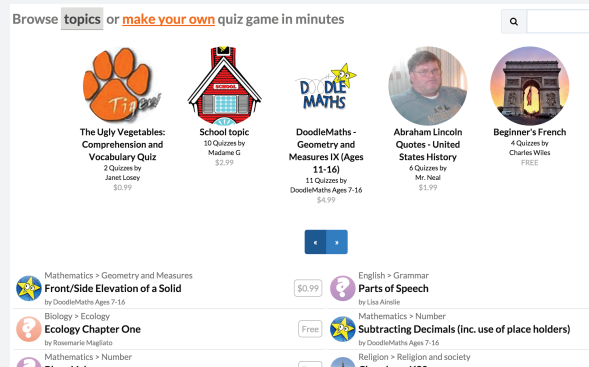

We could create a quiz from scratch, but since there are so many teachers already using Quizalize in over 110 countries, it's possible that one of them has already published a quiz similar to what we need.

Let's click on "Browse marketplace" and have a look.

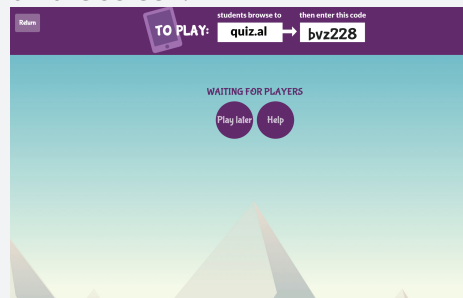

2

On the marketplace we can browse or search for a topic. When we have found a quiz that fits our needs we can click on the quiz to use it. (In case we don't find what you need, making our own is incredibly straightforward, as we'll see soon).
When viewing the quiz simply click "Give to my class"

3

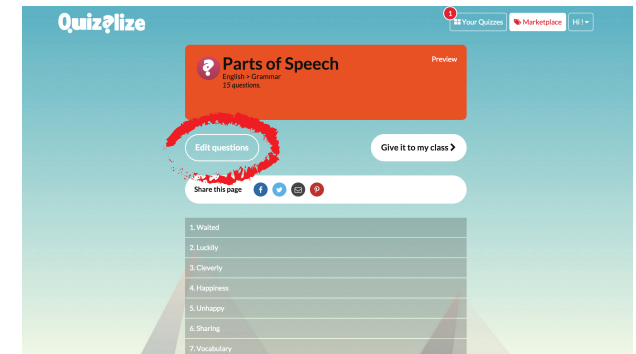

If the quiz doesn't need any editing you can play it right now. Just direct your students to www.quiz.al and have them enter a name and the class code shown on the screen.

4

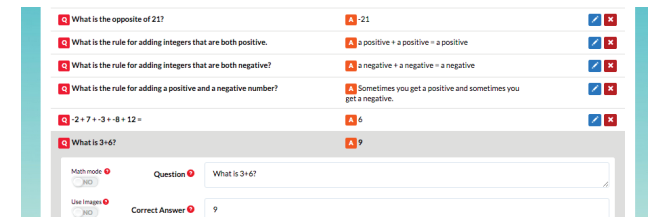

But wait, what if we want to edit some of the questions? No problem! Simply click on the question you wish to edit and the quiz will be saved in "Your quizzes".

Our profile contains all your quizzes, the ones you've made and the ones you got from the marketplace. We're going to click "Edit" on the math quiz we chose.

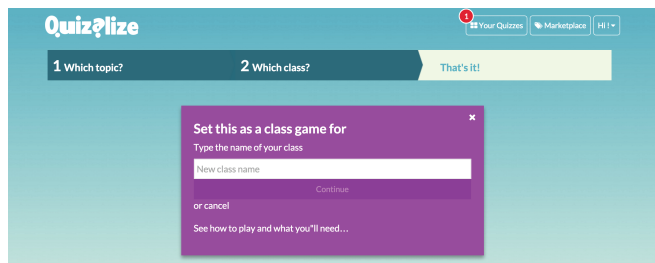

5

In the quiz editor we can delete questions we don't want and add a few of our own by clicking the "Add a new question" button

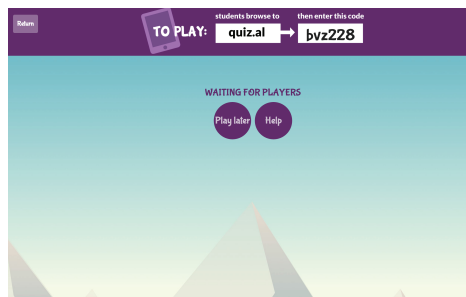

How to play in class and see the results

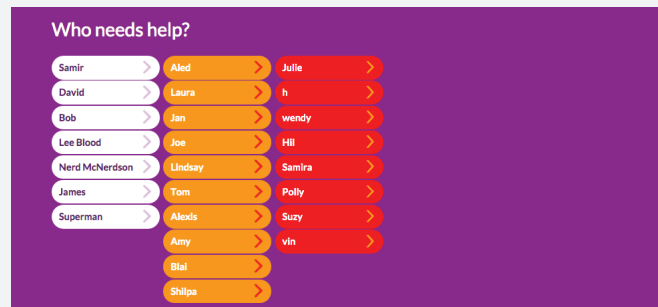

- 1 Now that we're happy with the quiz we can click "Give it to my class". Next, we'll name our class and click "Continue".

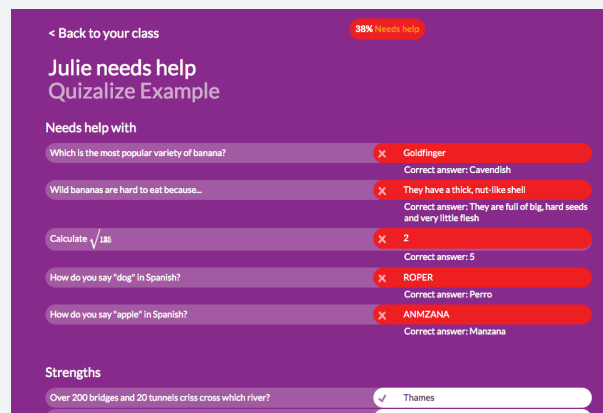

- 2 We're back on the dashboard. Our quiz is ready to be played. Our students can go to www.quiz.al and enter their name and the class code on screen to play our quiz! Our students can play right now, or they can play as homework. We can access this screen at any time by going to "Your classes" on the top bar.

- 3 Here's an example of a dashboard with student data. Here we can see who is stronger and weaker based on their score, and if we click a name we can see exactly what they struggled with.

- 4 The detailed student view lets us focus on specific areas they need help with.

- 5 Back on the main screen we can see straight away what areas the class as a whole struggled with.

- 6 We can click on the top question, which fewest students answered correctly. Now we can see what mistakes were being made here, and either address that topic in a class discussion, or identify smaller groups of students and correct that issue with them.

Congratulations. We hope you have a great time using Quizalize with your class. However, if you do have any issues, you can click on the blue speech bubble on the bottom right of the website and we'll be pleased to help you.
