

Employee Engagement Survey: Paraprofessionals: Central Administration

Results

School Year: 2021-2022

Overview of Project and Results

Engagement is the connection that individuals have with their profession in general and their current job in particular. Several factors can affect an employee's engagement, including relationships with supervisors and administrators, colleagues, students, and parents; the physical work environment; perceptions of personal safety; policy considerations and implementation; support for professional development and growth; perceptions of personal relevance; and general satisfaction.

The Special School District of St. Louis County (SSD) Employee Engagement Survey's goals were to:

- Measure the level of engagement of SSD employees
- Classify employees as highly engaged, engaged, or less engaged
- Identify areas where employee engagement can be improved

This survey was open from Jan. 19 to Feb. 11. Email invitations with unique survey links were sent to employees. Reminders were sent Jan. 27 and Feb. 1, 4, 8, and 11.

This report provides a site-level overview of the survey results. When possible, results are compared with those from 2019-2020 and 2020-2021.

Results do not reflect random sampling; therefore, they should not be generalized to all SSD employees. Rather, results reflect only the perceptions and opinions of survey participants.

Findings for each item in the report exclude participants who did not answer. Data labels less than 5 percent are not shown in charts and graphs. Percentages may not total 100 due to rounding.

Survey Design

The Employee Engagement Survey consists of three parts:

Overall Engagement is composed of nine items that are designed to measure each employee's level of engagement. Based on the average of the responses to these items, an engagement score is calculated for each survey participant. Engagement scores are classified as less engaged (<3.5), engaged (3.5 to 4.5), or highly engaged (>4.5).

Engagement Drivers are items about different aspects of the work environment that may affect engagement. Participants answered each item using the 5-point Likert scale. Engagement drivers are organized into six dimensions:

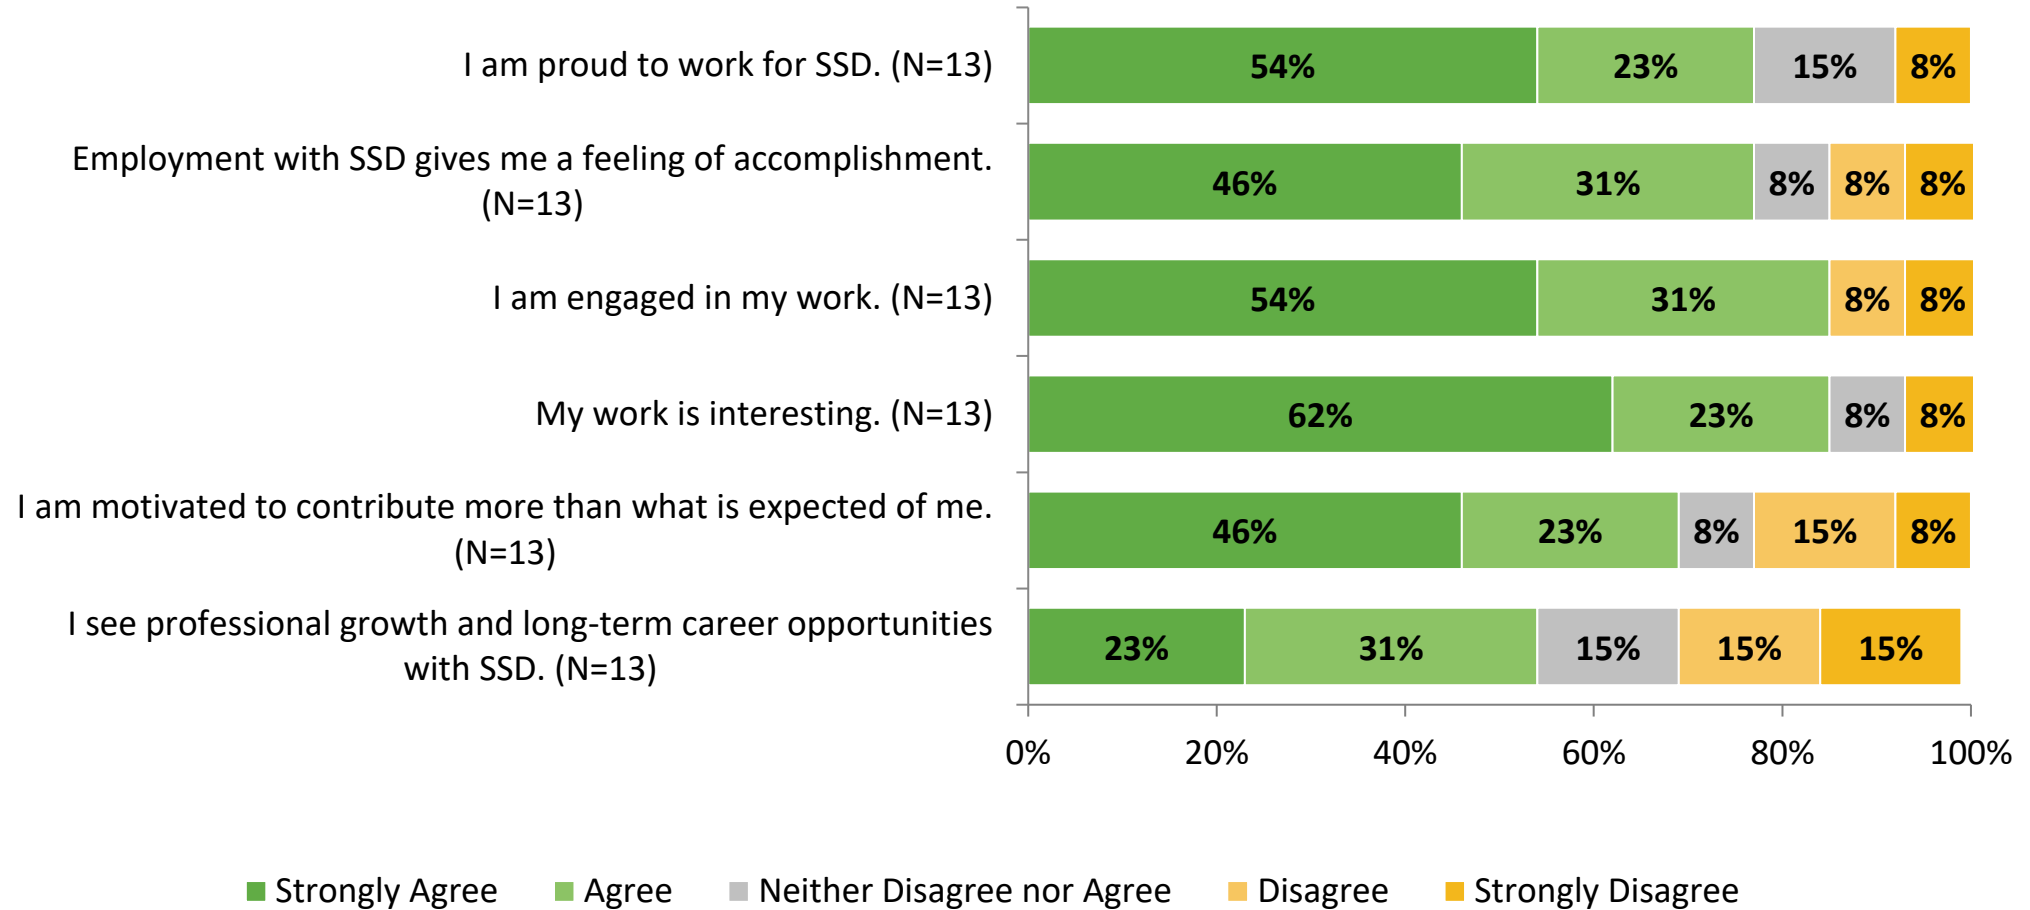

- Mission and Vision
- District Leadership
- School Leadership
- Feedback and Recognition
- Work Environment
- Career Growth and Training Opportunities

Additional Questions provide information about demographics of participants such as school, job classification, years of service, ethnicity, and gender, as well as information on staff support, professional development, and communications.

Calculating and Classifying Engagement Scores

Each participant's engagement score is the average of their responses to nine engagement questions (EQ). Those average scores are then classified on a scale of highly engaged (>4.5), engaged (3.5 to 4.5), and less engaged (<3.5).

	Engagement Questions									Average
	EQ1	EQ2	EQ3	EQ4	EQ5	EQ6	EQ7	EQ8	EQ9	
Participant 1	4	5	3	4	2	4	4	3	3	3.55
Participant 2										
⋮										
Participant Y										
> 4.5 Highly Engaged			3.5 to 4.5 Engaged			< 3.5 Less Engaged				

Overall Engagement

Responses to the nine engagement items were averaged to calculate an engagement score for each participant. To calculate the engagement score, each response option was assigned a numerical value:

- Strongly Disagree = 1
- Disagree = 2
- Neither Disagree nor Agree = 3
- Agree = 4
- Strongly Agree = 5

Average scores were classified into three levels: **Highly Engaged** (>4.5), **Engaged** (3.5 to 4.5), or **Less Engaged** (<3.5).

Focus Areas

Focus Areas to Increase Employee Engagement

Thirty-six items (drivers) were used to assess the school/workplace environment and identify opportunities to increase engagement. Each item was rated on a five-point scale, with higher values indicating stronger agreement.

The relationship between each employee's responses (driver ratings) and his or her overall engagement score was also analyzed. To do this, the strength of the relationship (the correlation coefficient) between the engagement scores and each driver was calculated. Values can range from zero to +1.0. The closer to +1.0, the stronger the relationship.

Driver ratings were classified as high or low based on the median. Correlations to engagement were classified as strong or weak based on the median.

The primary focus area (yellow) is for items that rated low but have a strong correlation to engagement. The secondary focus area (green) is for items that received high ratings and have a strong correlation to engagement.

Engagement Dimensions Calculations

Increasing Employee Engagement

Improving scores for these items will likely increase employee engagement. The average scores for these statements are low (at or below), but the items have strong relationships to engagement.

Survey Item	Driver Rating	Correlation to Engagement
Staff members are recognized for good performance at my work site.	3.54	0.88
My colleagues are held to high professional standards.	3.58	0.92
SSD leaders understand my professional needs.	3.62	0.90
SSD is moving in a direction that reflects our mission and vision.	3.77	0.93
The actions of my immediate SSD supervisor are consistent with his or her words.	3.77	0.91
I can count on the support of my immediate SSD supervisor when addressing problems or issues.	3.77	0.89
My immediate SSD supervisor regularly gives me constructive feedback to improve my performance.	3.77	0.86
I feel appreciated for my work.	3.77	0.86
