

Kyrene Visual Art Enrichment for Middle School At-Home Learning

TITLE: Drawing with One Point Linear Perspective

Short description: Draw a one-point linear perspective room with one vanishing point.

Create a simple drawing of a room using one-point perspective. Linear perspective is helpful for creating an illusion of space in a flat piece of artwork.

Materials: pencil, eraser, paper, ruler

Optional: colored pencils and/or markers

Instructions: Begin your drawing by drawing a square or rectangle in the middle of your picture. Put a dot in the middle of the square. Line your ruler up to the dot and each corner of your square before you draw a line out from the square's corners. This creates the basic room (walls and ceiling). Continue to use the dot (vanishing point) with each piece (i.e. window, door, rug, etc.).

See examples:

Step 1: Begin your drawing by drawing a square or rectangle in the middle of your picture. Put a dot in the middle of the square.

Step 2: Line your ruler up to the dot and each corner of your square before you draw a line out from the square's corners. This creates the basic room (walls and ceiling).

Step 3: Draw two short lines on either side of your ruler on the right wall.

Step 4: Line your ruler up with the right line's ends to the dot.

Step 5: Draw two longer lines on either side of your ruler on the left wall.

Step 6: Line up the left line end with the dot and draw a line.

Step 7: Draw a horizontal line under the square.

Step 8: Line up the two ends to the dot and draw lines toward yourself.

Step 9: Add as many details as you want. The more details you have, the more interesting your drawing will be to look at. Color in the drawing if you have coloring supplies. Reflect on your drawing and share with your teacher!
