

Lesson 6 – Change Color of an Object

First:

Right click on the image called *Sports Car.jpg* as described in Lesson 1. Add it to your Google Photos as described in Lesson 1.

Then:

1. Go to pixlr.com and open the *Sports Car.jpg* image
2. Choose the Lasso Tool (L) and click the left side of your touchpad while dragging the lasso around just the yellow part of the car (not the hood or tires or windshield). Try to get it as smooth and perfect as you can. I know. It's hard!
3. You should have selected all of the yellow part to recolor, but there are parts you shouldn't recolor, like the headlights, the black parts, etc. Now, hold down CTRL while selecting around all of the parts you DON'T want to recolor. You'll notice a little minus sign next to the lasso. You're SUBTRACTING things from the selection.
4. Choose a color on the color selector (at the bottom of the toolbox, like you did in the eye lesson)
5. Set your brush size like you did before and begin painting your car.
6. Get rid of the marching ants (selection) by going to EDIT>DESELECT or Ctrl+D
7. File>Save add *_recolor car* to the file name and save in your PIXLR IMAGES folder.

Practice Lesson 6:

Open the Lesson 6 Practice slide (PowerPoint or Google Slide) and insert your image. Answer the question on the slide. Complete the reflection form on one of your Explo teachers' Google Classrooms.
