Middle School Curriculum Guide 2023-24

Packer’s Middle School offers a rich, challenging academic program grounded in meaningful content and structured around the development of critical skills. We aim to create engaged, reflective students who are able to work hard, make connections and find joy both with their learning and as a member of the Packer community. Our goal is to foster students’ creativity and curiosity and to help them develop responsibility, self-awareness, empathy, independence, the capacity to work collaboratively, think critically and develop their own voice.

In the fifth grade, our academic program is anchored by classes in math and science and a combined English and history core class. The fifth grade academic program also includes year-long classes in instrumental or choral music and physical education as well as a rotation among our four arts classes (visual arts, digital video, theater, and dance) and a semester each of computing and design, health, and an introduction to our world language program through Latin and Chinese. Additionally, all fifth grade students either receive small group language or math support or are enrolled in an enrichment course, Language and Literacy or Math Explorations. This approach provides students with differentiated enrichment and support in critical skills.

Our sixth grade program parallels the fifth grade experience, but expands to include a choice in study of a second language (Spanish, French, Latin or Chinese). In seventh and eighth grade, English and history become two separate classes, students are able to deepen their language study, and can begin to specialize in two of our four arts choices and choose among physical education electives. As students move through the Middle School, their academic program becomes increasingly sophisticated; they are introduced to more complex and abstract ideas and take on more responsibility and independence inside and outside of the classroom.

Our academic program, which is detailed below, is enriched by a thoughtful, structured advising program, significant opportunities in athletics, arts and service, clubs and organizations that channel students’ developing interests and leadership, and intentional programming designed to support students’ social-emotional learning and growth, their healthy identity development, and a better understanding of themselves in the context of a diverse and globally-connected world.

English

The goal of the Middle School English curriculum is to encourage students’ love of reading and writing, as well as to introduce and reinforce the skills students need in order to read critically and to express their thoughts effectively.

Students first encounter the “whole class read” in fifth grade, and this model of a shared reading experience is supported throughout Middle School. Texts selected for whole class reads are chosen carefully. Factors taken into account include: age appropriateness, literary merit, diversity of voice and experience, and student opinion. Students are taught to annotate, to identify salient passages, and to draw

crucial connections, initially between ideas and, ultimately, between texts. As they move from the literal to the abstract, students receive support in analyzing and discussing texts. All students are required to read independently, as well.

Students write frequently in many analytical and creative genres. Through the use of rubrics, templates, and exemplars, teachers articulate their expectations and support students as they develop their voices as writers. Revision is taught as an integral part of the writing process. Vocabulary, punctuation, and grammar lessons support student writing.

Class activities encourage students to become confident speakers and active listeners. Oral presentations and group work are integral components of all courses.

Students have frequent experiences with project-based learning, interdisciplinary work, and the expanded classroom that is New York City. Teachers capitalize on opportunities to move beyond Packer's walls.

Grade Five English/History Core

In fifth grade, English and history are taught together as an interdisciplinary core class. The history curriculum begins with prehistory and geography and continues on to Nubia & Egypt, Greece and Rome. A number of the books read for English are connected to the history curriculum, including pertinent historical fiction and the Greek myths. Other age-appropriate novels, works of poetry, and short stories supplement the curriculum. Much of the work of the Core classes in English/History 5 is project-based. That is, the knowledge acquired cumulatively throughout a study is represented in a culminating project devised and executed by an individual or a small group depending on the unit. These experiences challenge students to be creative and to practice critical thinking, communication, group work, and problem solving. Additionally, the project-based approach provides many opportunities for differentiation and self-assessment.

The goal of the fifth-grade English curriculum is to encourage children to think deeply about literature, to discuss their ideas, and to write clearly about what they have read in terms of both content and their personal responses to it. In two instances in the fall, the entire fifth grade reads one book, but as the year progresses children make their own selections and run their own book clubs. These clubs are structured discussion groups in which 3-5 students read the same novel. Students, following a system of protocols, set reading goals, assign appropriate homework, create good discussion questions, and work together to devise and create a culminating project. In other English work, individuals present book talks on a rotating basis throughout the year.

Expository writing in English includes essay writing emphasizing organization based on a hierarchy of information; summary writing that reflects what is most important in a story; responses to literature exploring character and plot development; and the ability to substantiate one's point of view with textual "evidence." Creative writing emphasizes personal memoir, poetry, and fiction. Revision is a major part of both expository and creative writing. The vocabulary program is drawn from the history curriculum and from literature selections. The spelling program is integrated into the writing curriculum and emphasizes

basic spelling rules and frequently misspelled words. Grammar work focuses on parts of speech, punctuation, complete sentences, and paragraphing as a grammatical and stylistic tool.

The fifth-grade history curriculum asks students to consider how and why civilizations developed, the ways in which they are similar or different, the extent to which patterns of conquest and subjugation are cyclical, and the role of the victor (traditionally, men of wealth and position) in determining what is recorded for posterity. Students study geography with an emphasis on the determinative role it plays in the development of civilizations. Throughout the year, they work on note-taking skills to learn how to separate main ideas from supporting detail, organize notes by categories, and summarize what has been read. In addition, they learn how to construct and develop short essays. For their research project on ancient Egypt, students choose a topic, identify sources of information, take notes, organize, write and revise a report, and compile a bibliography. The writing and presentation of ancient Greek-style plays is a culminating project of the Greek unit. In the spring, during the study of Ancient Rome, students conduct a mock trial of Julius Caesar's assassins.

Other areas of emphasis in the Core program are oral presentation skills, study and organization skills, test-taking skills, and use of the laptop to enhance learning. Throughout the course, the skills of critical reading and analytical writing are practiced at an age-appropriate level, establishing a foundation for the ongoing literacy work that is a hallmark of the intellectual development and academic achievement that define the Packer experience.

Whole-class (shared) texts include *The Watsons Go to Birmingham: 1963*, a work of historical fiction by Christopher Paul Curtis; *Heroes, Gods and Monsters of Greek Myths*, an anthology of Greek myths retold by Bernard Evslin; *The Secrets of Vesuvius*, a nonfiction account of an archaeologist's work at Mt. Vesuvius presented alongside a fictionalized story based on that same archeological evidence by Sara Bisel; an array of novels read in small groups; a variety of memoirs; and selected poetry and short stories.

Grade Six English/History Core

In Sixth Grade English, students are encouraged to enjoy reading through our class novels and through independent reading books. Our class novels are: *Lost Boys* by Darcey Rosenblatt; *One Thousand and One Arabian Nights* by Geraldine McCaughrean; *Beowulf* by Robert Nye; and *Flying Lessons & Other Stories*, edited by Ellen Oh. Students learn to analyze literature through class discussions, writing, artwork, and conversations with smaller groups. Students write frequently and in a variety of ways about what they have read, including comprehension and inference questions, longer essays, and free responses. They also use our class novels as mentor texts for their own creative fiction and poetry writing. The course supports students' writing skills through the use of planning strategies, grammar and punctuation instruction, and the development of clear and precise expression.

In Sixth Grade History, students study the three interrelated cultures of the Islamic world, Europe, and China during the time period between 500 and 1500 C.E. A year-long Silk Road research project, in which students choose an occupation or role to research for each of the three cultures we study,

culminates in a simulation of cities along the Silk Road. Examination of the physical and cultural geography of each region studied is a significant component of the course; each unit incorporates increasingly sophisticated map skills. We also emphasize how each culture is reflected through its art. Several field trips to New York City museums and institutions supplement this aspect of the course. Additionally, current events presentations and discussions also complement our work in History class throughout the academic year.

Important skills emphasized in Sixth Grade Core include:

- Time management: managing long-term assignments with interim due date and effective use of study guides
- Note-taking: writing information using students' own words, using a variety of note-taking and organizational formats, moving from whole class note-taking towards independence
- Annotation: focusing on comprehension and analysis
- Oral presentation: speaking clearly and confidently in presentations
- Vocabulary: understanding words in context; enjoying new words and incorporating them into students' own vocabularies
- Expository writing: learning to write a thesis statement and support it in essay format
- Self-editing and revision of writing, incorporating feedback from teacher and peers
- Group work: cooperating with classmates to conduct discussions, create projects, etc.
- Technology: becoming familiar with online encyclopedias, reliable websites, introduction of new applications, etc.
- Transfer of skills between disciplines: English and History activities emphasize interdisciplinary connections to health, art, music, language, and computing and design

Grade Seven English

Seventh grade students are introduced to adult literature with a focus on developing critical reading skills through literary analysis with a strong emphasis on close reading and annotation. Students examine the language, narrative, syntax, and context of a text while annotating for literary elements encountered in both classic and contemporary works, including: theme, symbolism, foreshadowing, figurative language, sensory details, characterization, conflict, and setting. Students hone inferences, predictions, and connections both within and across texts, using annotations as evidence to substantiate claims in verbal and written responses.

William Shakespeare is introduced for the first time as a whole class text in the seventh grade. The study of *A Midsummer Night's Dream* allows for explicit teaching of skills such as: making effective use of textual features; paraphrasing; utilizing punctuation as a guide for interpreting tone and intonation; and comprehension and interpretation of a text through performance.

Written expression, both expository and imaginative, is developed through shared experience with a variety of genres including: journal entries, paragraphs, essays, poetry, short stories, and short narratives.

Expository writing focuses on perfecting a paragraph: crafting and developing topic sentences; choosing, categorizing, and analyzing quotations to support an argument; contextualizing quotations; transitioning between ideas; and utilizing a variety of sentence structures and lengths. Creative writing focuses on the genre of poetry and flash-fiction, and students are taught how to craft figurative language, sensory detail, and sound devices, as well as to develop point-of-view, setting, conflict, and character. The use of mentor texts serve as an effective tool for exploration of a variety of styles and creative writing techniques. In addition, students focus on voice, writing conventions, organization, and word choice. Seventh graders study vocabulary using Membean, an online vocabulary program. Grammar is taught using a sentence composition approach through the examination of model sentences and the exploration of syntax and structure. Students practice crafting rich, fresh, and grammatically correct sentences that feature voice and creativity.

Core Skills & Competencies

- Analyze elements of literature within a text
- Explore themes and messages in literature
- Dissect notable passages through annotation, discussion, and analytical writing
- Present theories of text while critically and empathically engaging with divergent positions
- Research and identify the social/historical context of a text
- Produce focused, well-organized paragraphs supported by relevant detail
- Engage with multiple points of view
- Question the questions, examine presuppositions and biases
- Write cogently and with personal voice
- Read and respond to the work of peers
- Share work with the school community and beyond

Texts include: *The Absolutely True Diary of a Part-time Indian* by Sherman Alexie; *A Midsummer Night's Dream* by William Shakespeare; *Of Mice and Men* by John Steinbeck; and selected poetry, short stories, and non-fiction pieces.

Grade Eight English

In eighth grade we develop strong and passionate readers, writers, and thinkers who take pleasure in grappling with texts, sharing and arguing ideas and interpretations, and articulating their thinking in writing that is both cohesive and eloquent. Students read sophisticated literature that emphasizes themes such as coming of age, the relationship between parent and child, and individual and communal responses to injustice. Texts are examined and annotated with an eye toward theme, motif, style, and symbolism. The work is then harnessed in the service of essay writing.

Students begin the year by examining the structures of memoir, reading from a variety of authors and ultimately writing their own. The genre, distinguished by a moment of *metanoia*, a transformative change

of heart, focuses on the moment in which a seemingly small occurrence has expansive ramifications in terms of self-awareness, personal identity and the role of the individual in a global society. Moving on to a broader landscape, English 8 then looks at culture through the lens of Race, Culture, and History, beginning with an examination of Octavia Butler's *Kindred*. Next, we read current op-ed articles by a wide variety of adult and young adult published authors, the majority of whom represent historically under-represented experiences and points of view. Afterwards, we delve into *MAUS I*, a graphic memoir and biography that depicts the experience of a son interviewing his father about his experience as a Jew in Poland during the second World War.

Additionally, students run book clubs of 4-6 members/each in which each participant takes an active and well-defined role in guiding conversations and shaping written responses.

Eighth graders study vocabulary independently, using Membean, an online vocabulary program. Grammar is taught through the examination of model sentences and the exploration of syntax and structure. Students practice crafting rich, fresh, and grammatically correct sentences that feature their voice and creativity.

Throughout, we develop the critical reading and analytical writing skills that we consider the hallmark of intellectual development.

Core Skills & Competencies:

- Analyze elements of literature within a text, connecting part to whole,
- Present theories of text while critically and empathically engaging with other's positions
- Research and situate the social/historical context of a text
- Explore themes and messages in literature
- Dissect rich and relevant passages through annotation, discussion, and analytical writing
- Evaluate non-fiction texts in the context within which they were written
- Evaluate the use of rhetorical devices
- Speak, actively listen and engage with multiple points of view
- Analyze works of fiction with a focus on character development and theme
- Write with organization, point of view and voice
- Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience
- Publish work to share with the school community and beyond
- Use reading and writing as a thinking tool in order to begin to develop an identity as a school citizen and as a global citizen

History

Packer's Middle School History Department encourages students to enjoy the study of history and to grasp its relevance to the present. We want our students to participate actively in the study of History – to ask questions, challenge assumptions, examine multiple perspectives, analyze sources, make connections between what they already know and what they are learning, make judgments, and express opinions. In

the process, we use a range of pedagogical strategies such as simulations, debate, and project based learning to excite students about the study of history and engage them in multiple modes of learning.

The History Department develops these skills and habits of mind, which undergird further study of the discipline and inform participation in local, national and global communities:

- To analyze primary and secondary sources
- To write persuasively using specific supporting evidence
- To present clear and logical ideas orally
- To research effectively
- To develop study skills such as time management, note taking, and awareness of different learning styles
- To learn and appreciate how geography shapes human interaction and influences history
- To work independently and collaborate with others
- To understand current events and their relationship to history
- To connect personal experiences with a deeper understanding of the range of human experience
- To understand and appreciate experiences that differ from personal experiences and values

In the Fifth and Sixth Grades, each English and History course is taught together by one teacher as a Core class. In the Seventh and Eighth Grades, the two disciplines make appropriate interdisciplinary connections. Project-based work and excursions into the city are integral to the program.

Grade Five/Six History

See under Grade Five/Six English/History Core

Grade Seven History: American History

Seventh Grade History introduces students to the idea that historical narratives should be questioned and interpreted. It focuses on practices that develop inquiry, deliberation, analysis, and empathy. We emphasize that while historical events may have happened long ago, their effects shape the present in ways that can be global and personal. This course, the first in a two year sequence of U.S. history, covers the periods from English colonization through the mid-19th century. Essential questions include: how does geography shape culture? What are the relationships between land, money, and power in the American context? How do people from various religious, ethnic, racial, and social backgrounds work to build community or come into conflict? What tensions exist between the need to be both an individual in society and a member of a community? What are the foundational principles of American government and how does our government operate? In what ways does technology act as a force for social, economic,

and cultural change? Are individuals the masters of their own destiny or bound by forces outside of their control? What is an American?

Students explore these questions through primary and secondary source analysis, discussion, debate, role-play, simulation, expository writing, interdisciplinary projects, and creative expression.

Texts include: *A History of Us*, by Joy Hakim (Oxford Press); *Narrative of the Life of Frederick Douglass*, by Frederick Douglass; *The Absolutely True Diary of a Part-Time Indian* by Sherman Alexie; *A Young People's History of the United States* by Howard Zinn

Grade Eight History: Twentieth-Century U.S. History In The Global Context

Throughout the twentieth century, the United States experienced a series of profound changes that impacted society at home and abroad. This course will focus on the key ideas, issues, people, and events that helped to transform the country and the world during this time. Students will identify relevant themes that will help them to make connections between the past and the changing world in which they currently live. We will examine industrialization and imperialism as historical events, and then analyze and evaluate their continuing impact on our environment and our place in the global order. We will study Progressivism and the New Deal and ask questions about the role the government should play in the lives of ordinary citizens. Through our studies of labor unions and The Harlem Renaissance, we will look at how collective action and artistry can effect change. The various wars of the twentieth century will provide the foundation for looking at how we define “the other,” procure resources, and deal with power. The wars will also be an opportunity for students to learn to identify propaganda and why it is effective. We will engage in discussions and continue to develop listening, note-taking, and historical thinking skills. Additionally, we will learn to analyze and evaluate a variety of primary and secondary sources to more fully understand the past and the historical process. We will continue to practice analytical writing skills and will work on a variety of projects that involve collaboration, role play, debate, research, and oral presentations.

Texts: *The Americans: Reconstruction to the 21st Century* (Mc Dougall & Littel); *Animal Farm* by George Orwell; *American-Born Chinese* by Gene Luen Yang; *A Young People's History of the United States* by Howard Zinn

Mathematics

The Middle School Mathematics curriculum is structured to gradually develop students' knowledge of basic math operations and algebra and to enhance their critical thinking skills. The Middle School Mathematics Department has developed a sequence of courses that both build on students' knowledge from Lower School and expand this foundation in preparation for more complex math studies in future courses. In addition, our curriculum promotes student inquiry, critical thinking, and problem solving by exploring mathematics in a multitude of ways. Students have several opportunities through their Middle

School years to discover concepts independently, while solidifying their understanding by applying problem-solving techniques to real-world situations and sharing their understanding with their peers.

Grade Five Mathematics

Fifth grade mathematics is a discovery-oriented course that builds on concepts and skills learned in fourth grade. Students develop computational fluency with operations on whole numbers and further solidify their understanding of operations with fractions and decimals. They study ratios and percents, exponential notation, elementary number theory (primes, composite numbers, factors, and multiples), plane and coordinate geometry, measurement, probability and statistics, and introductory algebra. Students practice computation, estimation, and problem solving, and they apply these skills through a variety of explorations and projects.

Text: *Bridges Mathematics Grade 5*

Grade Six Mathematics

Students in sixth grade learn math through an inquiry-based approach. Units are comprised of investigations that offer students the opportunity to explore problems in groups and then solidify their understanding afterwards through teacher-guided class discussions. Sixth grade students master operations of whole numbers, decimals and fractions; the year also includes extensive work with number theory, rates and ratios, percents, plane geometry, and introductory algebra.

Text: *Connected Mathematics 3, Grade 6*

Beginning in the 7th grade, students are grouped into different course levels, standard or advanced, based on their previous achievement in 5th and 6th grade.

Grade Seven Pre-Algebra

Students in seventh grade learn math through an inquiry-based approach. Units are comprised of investigations that offer students the opportunity to explore problems in groups and then solidify their understanding afterwards through teacher-guided class discussions. Seventh grade students master integer operations and deepen their understanding of ratios, percents and proportions. They learn to solve linear equations and also explore linear relationships by considering their associated equations, graphs, and story problems. The second half of the year, students complete units on plane and 3-D geometry, and learn about experimental and theoretical probability.

Text: *Connected Mathematics 3, Grade 7*

Grade Eight Mathematics: Algebra I

Students in eighth grade learn math through an inquiry-based approach. Units consist of investigations that offer students the opportunity to explore problems in groups and then solidify their understanding afterwards through teacher-guided class discussions. Students do extensive work with the Pythagorean theorem and radicals, and they deepen their understanding of linear and non-linear relationships. They are also introduced to exponential and quadratic functions, studying the equations, graphs, and contexts associated with those relationships. They close the year with a unit on solving linear systems of equations and inequalities.

Text: *Connected Mathematics 3, Grade 8*

Science

The Middle School Science Program emphasizes the development of critical thinking, collaboration, scientific experimentation, and research and design. Within each grade, concepts involving earth, physical, and life sciences are organized around major themes to enable the application and development of these important and practical skills. Curricular activities are centered around student inquiry and are designed to support age-appropriate development of independence. Each spring, student progress is presented at the 5th & 6th Grade Design Showcase and the 7th & 8th Grade Science Fair.

Grade Five Science

Earth science is used as a vehicle for the development of scientific literacy in fifth grade. The overarching goal of the fifth grade science curriculum is to provide students with opportunities to develop the skills and behaviors of a scientist such as making observations and measurements, collecting and analyzing data, making inferences, problem-solving, working collaboratively, and model-making. The course purposely intertwines science, history, math, and technology and demonstrates that science is an invaluable process that is never practiced in isolation. At the start of the year, students focus on Earth's place within the solar system. Students are introduced to basic physics concepts of force and motion, and light and its properties. As the year progresses, students look inward and study the atmospheric, hydrologic, and geologic systems of planet Earth. Students study the causes of and solutions to global warming, ocean acidification, and climate change. With each Earth science topic, students learn about the history and technologies surrounding those topics. Throughout the year, students are challenged to synthesize what they have learned by collaborating on three major STEM projects: satellite telescopes, buoys and submersibles, and earthquake resistant schools.

Grade Six Science

The content focus of Sixth grade science is on basic physics concepts. These concepts include relative motion, forces as interactions, electrical energy, and simple machines. The curriculum consists of inquiry-based activities that allow students to make meaning of physics concepts through supported,

hands-on experience. An integral part of the curriculum is the process of Design Thinking; a human-centered approach to iterative design. The underlying skills of research, brainstorming, iteration, and collaboration are developed during design projects. At the end of the year, students are challenged to design and engineer a machine that accomplishes a simple task.

Grade Seven Science

In seventh grade science, students begin studying the biotic and abiotic factors that make up the Hudson River ecosystem and how each are interconnected with the others. Students will conduct a variety of activities in order to develop their ability to effectively create a well-designed experiment. Students also identify the characteristics of life, using evidence-gathering activities to define what makes something living and nonliving, and investigating the role evolution plays in the changing nature of all life on Earth. Students will focus on understanding the intricate nature of ecosystems in the second semester, delving into food webs, carrying capacity, and energy pyramids before tackling the Hudson Data Jam, a group project that asks students to analyze published scientific data and was student-led in its focus, planning, and execution. Students will continue their real-world science work with weekly trips throughout Brooklyn to observe and record potential raptor nests; this scientific data will be presented to and then used by the NYC Parks Department to better understand raptor nesting behaviors. Students finish the year by studying organelles, cells, and organ systems, using evolution to better understand how certain types of cells came to be. This unit will end with dissections of animals with different body plans, tying again to the evolutionary understanding of the unity and diversity of life. The year culminates with the Science Fair where students bring all their practical and theoretical knowledge into practice and develop their understanding of a topic in which they are particularly interested.

Grade Eight Science

In eighth grade science, students delve into the world of environmental chemistry. Students are introduced to the concept of matter and learn to describe, analyze, and observe physical and chemical properties of matter. Students will extend their study of matter by exploring basic thermodynamics and climate change. During a series of experiments and simulations, students will gain an understanding of the causes and effects of global warming and identify potential solutions to this problem. After considering this large-scale theme, students will return to the micro-level to investigate atoms, elements, and the periodic table by designing experiments, classifying types of chemical reactions, and exploring the Law of Conservation of Matter. Students will synthesize and apply their understanding of these concepts as they examine the chemistry of sustainable agriculture. Experiments are integral within the year and not only will the students be coming into contact with a wide range of chemicals and scientific equipment, but they will be learning how to design an experiment in order to attain accurate and reliable data. In line with the practical aspect of the year, students will be also working on several STEM (Science, Technology, Engineering and Math) projects that involve designing and testing prototypes. The year culminates with the Science Fair where students bring all their practical and theoretical knowledge into practice and develop their understanding of a topic in which they are particularly interested.

World Language

The faculty of the World Language Department are committed to providing a curriculum through which students develop the skills necessary for comprehension and effective communication in Chinese, French, Latin, and Spanish. Each successive level of instruction is aimed at building upon the skills of the previous year. In addition, our faculty believe that the study of people and culture is a critical part of investigating the world, recognizing perspectives, and communicating ideas in another language. Therefore, appropriate historical and cultural material is integrated into the curriculum at each level of the program.

Grade 5 World Language: Explorations in Latin and Mandarin Chinese

The Middle School Language program begins in 5th grade, with the dual study of both classical Latin and Mandarin Chinese. The goals of the 5th grade exploratory program are that students not only learn basic Latin and Mandarin, but also learn what a language is; how a language works; and what a language can tell us about the people who spoke/speak it. The ultimate goal is that students feel that they are successful, competent, and confident language learners. Our Middle School Language teachers use a multisensory approach to teach language, which enables students to make connections and learn concepts through songs, chants, drama, hand signals, kinesthetic activities, and videos. The 5th grade program lays the groundwork for any of the four language programs so that students in 6th grade are confident and enjoy learning language. In 6th grade, students and their parents have the opportunity to select one of four languages: Latin, Mandarin Chinese, French and Spanish.

Mandarin Chinese

Year 1 Chinese: Introduction to Mandarin Chinese

This is a yearlong course in the introductory level of Mandarin Chinese. This course is intended primarily for students with no previous knowledge of Chinese. While the course is designed for students to develop all four skills in the language, more emphasis is placed on pronunciation with accurate intonation. The overall goal is to provide students with a solid foundation in Mandarin Chinese and to prepare them for the next level of study. At the end of Year 1 Chinese, students will be able to recognize 50 basic radicals, make a self-introduction (name, age, birthday, family members, etc), grasp the vocabulary of countries and continents, learn and celebrate Chinese festivals, and compare school systems in China and in the United States.

Texts: *Chinese Made Easy, Book 1, 2nd edition, Simplified Characters, Joint Publish, Hong Kong; Textbook & Workbook.*

Year 2 Chinese: Fundamentals in Chinese

This is the second-year course in Mandarin Chinese. This course is intended primarily for students who have completed Year 1 Chinese. The course continues to stress the development of all four skills in the language: listening, speaking, reading and writing. It is designed to help students develop proficiency in verbal communication, reading comprehension and simple writing skills. The overall goal is to provide students with a solid foundation in the Chinese language and to prepare them for a higher level of study. At the end of Year 2 Chinese, students will be able to talk about hobbies, sports, weather, clothing, travels and their personal preferences. They will also learn adjectives for describing actions, clothing, weather and physical features.

Texts: *Chinese Made Easy, Book 2, 2nd edition, Simplified Characters, Joint Publish, Hong Kong; Textbook & Workbook.*

Year 3 Chinese: Foundations in Chinese

This course is intended for students who have completed Year 1 and Year 2 Chinese. This course aims to develop the students' intermediate language skills in listening, speaking, reading, and writing. Students will be able to recognize and reproduce at least one hundred and fifty Chinese characters. They will also be able to write short essays, dialogues, and simple descriptive/narrative texts covering everyday topics. Through a series of culture-based activities, students will not only learn about Chinese culture, but also develop a basic awareness of cultural commonality and diversity.

Texts: *Integrated Chinese (simplified edition): Level 1, Part 1, Cheng & Tsui Company, 3rd Edition*

French

Year 1 French: Introduction to French

This Middle School course is designed to build a foundation in the French language and to introduce students to various aspects of French and Francophone culture. Students learn to introduce themselves, ask questions about people's identities as they investigate and reflect on the role of language in shaping identities. Students also learn to exchange information about their lives at school, and how school schedules reflect educational values of different communities. Finally, students study how to present their families, talk about their lives at home, and explore family life in different francophone cultures.

By the end of Year 1 French, students will be approaching a Novice-Mid Proficiency Level on the ACTFL

scale

Year 2 French: Fundamentals in French

Students build on the skills they acquired during their first year of French, starting with who the members of a family are, and what constitutes a home. Students learn to recognize the diversity of family structures, and explain relationships between people. They investigate how people gather together and why, and what functions different parts of the house serve. Moving on to our *Bon Appétit* unit, students learn to share preferences, opinions, and habits about food choices, and food purchases. They look at the role of food in everyday life, how cuisine defines cultures, and what habits and traditions are associated with meals in the Francophone world. In the second half of the year, students learn to exchange information about leisure, activities, sports, and what their impacts are on everyday life. Finally, students reflect on how their surroundings shape their identities with the unit entitled *En ville*.

By the end of Year 2 French, students will be approaching a Novice-High Proficiency Level on the ACTFL scale

Year 3 French: Foundations in French

This intermediate Middle School course reviews and consolidates the grammatical topics and vocabulary studied in Year 1 and Year 2 French. Students will begin to express themselves in the past and the future, and expand their vocabulary to be able to ask questions to satisfy basic needs. Students read several short stories and poems in French and explore the worlds of France and French-speaking countries through readings, music, films and projects.

By the end of Year 3 French, students will be at an Intermediate-Low Proficiency Level on the ACTFL scale

Latin

Year 1 Latin: Introduction to Latin

In the introductory Latin class, students work toward the ultimate goal of reading and comprehending Latin in a meaningful context. In pursuing this goal, students will also acquire historical and cultural knowledge about antiquity. Students will also gain an enriched understanding of English vocabulary and grammar. The class will focus on acquiring Latin vocabulary, making connections with English derivatives, and memorizing basic Latin grammatical forms and functions. Students gain an

understanding of how the structures of Latin words and sentences impart meaning in a way that's different from English. Students will then learn how to apply this knowledge to understanding stories written in Latin, that increase in sophistication as the year progresses.

In the end, students will be approaching a novice-high proficiency in interpretive reading and presentational writing on the ACTFL scale.

Texts: *Cambridge Latin Course, Unit I.*

Year 2 Latin: Fundamentals in Latin

This Middle School course is a continuation of the skills introduced and mastered in Year 1 Latin. During the year students will further their exploration of the grammatical forms and functions of the Latin language, while exploring the history and culture of Rome. Students will continue to develop and sharpen their ability to read Latin with comprehension, to translate with accuracy, and to write original Latin compositions using the vocabulary and structures we are learning. For the purpose of enriching the students' English vocabulary, emphasis will continue to be placed upon the roots and derivations of the Latin vocabulary encountered. Emphasis will likewise be placed upon the rich historical and cultural aspects of antiquity so that students may gain an understanding of and appreciation for the impact of the ancient world upon our own heritage.

In the end, students will be approaching an intermediate-low proficiency in interpretive reading and presentational writing on the ACTFL scale

Texts: *Suburani, Book I.*

Year 3 Latin: Foundations in Latin II

This Middle School course is a continuation of all of the basic skills introduced and mastered in the previous year. During the course of the year students further their exploration of the grammatical forms and functions of the Latin language, sharpening their skills at reading, and translation with an informed grammatical analysis of the language. New vocabulary, grammar and syntax are studied within the meaningful context of continuous passages of Latin prose. For the purpose of enriching the students' English vocabulary, emphasis will continue to be placed upon the roots and derivations of the Latin vocabulary for each successive chapter in our ongoing stories in *Suburani*. A focus upon the culture and history of Rome reinforces the link between their civilization and our own.

In the end, students will be approaching an intermediate-high proficiency in interpretive reading and presentational writing on the ACTFL scale

Texts: *Suburani, Books I + II*

Year 1 Spanish: Introduction to Spanish

Introduction to Spanish is designed to build a foundation in the Spanish language and to introduce students to Spanish-speaking cultures. From the start, students will develop listening, speaking, writing, reading and conversational skills in Spanish. All of these skills are equally important in this course. Students will focus on simple sentence structures and verbs in the present tense. Throughout this year students will explore the diversity of the Spanish speaking world and learn how to discuss their own identities, cultures and families. Students will do this through an array of activities that activate all modes of communication. .

By the end of Year 1 Spanish, students will be approaching a Novice-Mid Proficiency Level on the ACTFL scale

Year 2 Spanish: Fundamentals in Spanish

In this course students build upon the foundation developed during their year in Year 1 Spanish. Units include daily life in the home, travel, celebrations, food, and how to make plans for the future. Students expand their knowledge of basic grammar and further develop their proficiency in all areas of the language. This course aims to build student confidence and the ability to express themselves in the target language. Students will demonstrate their language proficiency through comprehensive presentations, cooperative projects, and written and oral activities. Extensive use of authentic materials and technology will enhance student learning.

By the end of Year 2 Spanish, students will be approaching a Novice-High Proficiency Level on the ACTFL scale

Year 3 Spanish: Foundations in Spanish

This intermediate Middle School course reviews and consolidates the grammatical topics and vocabulary studied in Year 1 and Year 2 Spanish. Students will begin to express themselves in the past and the future, and expand their vocabulary to be able to ask questions to satisfy basic needs. Extensive use of authentic materials and technology will enhance student learning.

By the end of Year 3 Spanish, students will be at an Intermediate-Low Proficiency Level on the ACTFL scale

Learning Support

Middle School Learning Specialists teach Learning Support classes, which are offered for students who need to strengthen their fundamental language and math skills. The ultimate goal for students in these classes is for them to transfer these skills across content areas and apply them independently. In sixth through eighth grade, Learning Specialists meet with a small number of students individually or in small groups to support their learning needs. This support focuses on developing academic skills in specific content areas, coaching students with executive function skills such as time management and organization, and directly teaching learning strategies. Middle School Learning Specialists collaborate with teachers regularly, attend team meetings, and support our students by being present in many classes.

Grade 5: Learning Support

Language:

The fifth grade Language Support class focuses on developing reading and writing. Courses include practice in decoding, encoding, reading comprehension, vocabulary, and the writing process, among other key skills. Language Support classes also support students' developing thinking skills, as well as metacognitive awareness to allow students to reflect on themselves as learners and begin to self-monitor their study habits. The Learning Specialist teaching the course also supports students through a push-in model in their Core classes.

Math:

Similar to the Language Support class, fifth grade Math Support consolidates and expands students' skills in key mathematical areas. The Math Support curriculum is closely aligned with the fifth grade math program, providing time to reinforce and extend concepts covered as well as target additional areas where students need support. Math Support classes also support students' developing thinking skills, as well as metacognitive awareness to allow students to reflect on themselves as learners and begin to self-monitor their study habits. The Learning Specialist teaching the course also supports students through a push-in model in their Math classes.

Grade 6: Learning Support

Language:

Language Support consolidates and expands the complexity of reading, writing, and study skills begun in 5th Grade. Aligned with sixth grade English/History Core, this course offers students an opportunity to expand and improve their English reading, writing, vocabulary, grammar, and Middle School study skills.

The curriculum includes investigation into Latin roots of English words and Latin derivatives in particular, word-sentence-paragraph analysis, English grammar activities, and the non-fiction reading and note-taking skills that are needed for students to be successful in Science and History. The Learning Specialist teaching the course also supports students through a push-in model in their Core classes.

Math:

Similar to the Language Support class, sixth grade Math Support consolidates and expands students' skills in key mathematical areas. Students build their fluency with number facts, explore mathematical concepts, and gain practice using efficient algorithms for problem solving. The Math Support curriculum is closely aligned with the sixth grade math program, providing time to reinforce and extend concepts covered as well as target additional areas where students need support. The Learning Specialist teaching the course also supports students through a push-in model in their Math classes.

Grade 7 and 8: Learning Support

Language Support

Aligned with 7th and 8th grade English, these classes offer students an opportunity to expand and improve their English reading, writing, vocabulary, grammar, text analysis and Middle School study skills. The Learning Specialist teaching the course also supports students through a push-in model in their English classes.

Learning Support:

Students in grades 7th - 8th may be recommended to take a World Language Waiver and instead, take a full band of learning support. The Learning Support class focuses on executive function skills, time management, organization and study skills in all subject areas. Students in the class are required to maintain a planner for their work. The goal is for students in the class to gain independence in their work and study habits by the time they leave the Middle School.

Math:

In 7th and 8th Grade, Math Support is taught by a member of the Math Department. Students whose prior work and/or standardized tests indicate that they would benefit from ongoing, structured support in their math learning may be recommended for a Math Support class. These mandatory classes meet twice per week with a Math Department member so that students can receive additional support with math in a small group setting. The Math Support curriculum is closely aligned with the seventh and eighth grade math program, providing time to reinforce and extend concepts covered as well as target additional areas where students need support. Additionally, students in Math Support receive push-in support in their math class once per week.

Digital Wellness

Digital Wellness is a holistic approach to technology that recognizes the power of digital tools and practices in supporting learning, being productive, and tackling real world problems. We also know that technology can be distracting and sometimes leads to negative impacts on students and society as a whole. By finding the right balance of technology use in our program and helping students individually strive for balance we aim to prepare them for the world beyond Packer.

We infuse technology in our program to enhance curriculum across disciplines and grade levels, and further innovation, design, computational thinking, and digital fluency. These values are realized through our 1:1 computing program, our Google Classroom learning platform, and the use of technological tools and approaches across the curriculums. Our goal is for students to embrace technological tools and processes so they can become active digital creators and thoughtful, responsible users of technology.

In grade five students begin the Packer Laptop Program. Each student is provided a laptop to learn to use the device effectively and responsibly for meaningful learning. Students will use these devices to: conduct online research, create videos and music, produce written documents, manipulate and visualize data, and engage in programming and robotics. Students begin bringing home the computer in the fifth grade and use the same device throughout their middle school career.

Students use the Google Classroom platform to manage classwork and assignments, collaborate with peers and interact digitally with their teachers. All middle school homework is posted in Google Classroom, whether the assignment is done digitally or by hand.

Packer's Digital Wellness program supports students to think critically, behave safely, and participate responsibly in our digital world. Digital Wellness activities take place in Computing & Design, Health, Library, Advisory and across the curriculum. The Digital Wellness program uses many materials from Common Sense Media, and parents are encouraged to visit their website.

Computing and Design

Students in grades five through eight are introduced to the important field of computer science and the design thinking process through a required yearly semester-long course. The Middle School computing and design curriculum is designed to expose students to key concepts in the field including computational

thinking, physical computing, and the design process. Through the development of engaging software and hardware projects students develop their creativity and critical thinking.

Grade 5 Computing & Design

Students begin the course by receiving their laptop and exploring how they will be using it throughout their time in Middle School. This includes skills from how to write an email to backing up data in Google Drive. They will then begin to learn about Digital Citizenship and what it means to be responsible online through resources from Common Sense Media. In their third unit students examine the hardware components of their laptop, building upon their understanding of how these components work together. In the second half of the semester, students focus on their computational and design thinking skills through the Lego WeDo and Scratch platforms. By building and programming various projects, students will finish the semester learning concepts such as loops, variables, conditionals, modularity, and debugging.

Grades 6 Computing & Design

This course begins with students reviewing computational concepts by creating interactive games, in Scratch, that require students to think about how players/users will use their program. After getting comfortable programming again students dive deeper into Digital Citizenship, looking at cyberbullies/upstanders, communicating online, racial and gender stereotypes, and plagiarism/copyright. For their third unit, students explore 3D modeling through Tinkercad. For their main project students create models of items, buildings, and landscapes from the Middle Ages researched in their English/History class. The next unit focuses on robotics where they experiment programming Lego EV3 motors and sensors, with the goal of creating a self-driving car. The final project of the semester has students working in pairs to develop what phones will look like 10 years in the future using Tinkercad and Scratch. This design thinking project is presented in each class and showcased to the entire grade so students can see the various different phones and user interfaces their peers created.

Grades 7 Computing & Design

In the seventh grade students begin the semester by exploring Lego EV3 motors and sensors, eventually having them create an autonomous robot that can draw their initials. During the second half of the semester students work extensively in Khan Academy's text-based program, where they learn how to use

the Javascript language to create fun drawings and animation. Students learn how code they used in block-based coding: variables, functions, logic and if statements, and looping, is used in a text-based language. They learn these foundation topics of computer science starting with a lesson on shapes utilizing coordinate geometry and ending in animations. Students end the semester with a logo project in conjunction with the 7th grade art curriculum in creating a logo of their initials that defines who they are. They create a 4 by 4 size painting of their logos and then, from these inspirations, the students create a program that reflects their logos.

Grade 8 Computing & Design

In the eighth grade, students begin with a review of computer science concepts from 7th grade through Javascript, a text based programming language, in Khan Academy. Students then move onto the p5 editor, which allows them to further develop their debugging skills as they no longer have Khan Academy's built in code checker. Students review computer science concepts of variables, functions, logic and if statements, and looping through different animations. After this review, students learn how to make their programs interactive through the mouse and keyboard. This gives students the opportunity to create more complex programs and think how users will play their animations/games. For their final project, students create an animation or game that shares information and brings awareness to the topic they researched for Health or feel passionate about.

Fine and Performing Arts

The Arts department offers artistic opportunities to inspire, develop and foster our student's creative voice. Middle School Arts is a joyful collaboration between teachers and students with opportunities for work that are playful and meaningful, and challenges that encourage risk-taking with an emphasis on exploring new ideas in an imaginative way. The arts scaffolds the curriculum by providing the practical tools necessary to help students create, explore, and experiment in any medium they may choose. The span between fifth and eighth grade are significant transitional years and through the arts we embrace those transitions as we address our students' increasing ability to see more clearly and think more deeply.

Using both traditional and innovative techniques, we encourage students to take creative risks, we support our students when they meet with setbacks, and we encourage the rigors of disciplined craft and development of both technical skills and artistic experience in all specialties.

In all of our arts (Dance, Digital Video, Theatre and Visual Arts) and music (both Choral and Instrumental) classes, we foster both the formal studio/class experience, and the co-curricular experience, in which students share their work in a supportive environment, both within and beyond Packer's walls.

Dance

Grade 5 Dance

In 5th Grade we highlight the connection between culture and dance. We explore the differences in music, rhythm, dress, patterns and techniques of ten different countries, dancing everything from breakdancing to salsa to Bhangra dance. Through celebrating the differences between movement styles and cultures, we hope to discover similarities that help us all to connect.

Grade 6 Dance

At the 6th grade level, dance class gives students the opportunity to learn exciting new dance techniques through a look at dance and music history of the turn of the century in America! In this “Journey Through Jazz” we will explore body percussion, tap dance, swing and jazz dance. The hard work of the students is showcased at the end of each quarter with a swingin’ live performance share.

Grade 7 Dance

Students in 7th grade explore rhythm, cultivate coordination and focus on grounded movement through the exciting studies of both Hip Hop and African dance. The course will combine the best of dance technique, tradition, pop culture, and self-expression. In the beginning students will learn basic stationary and locomotor movements, challenging themselves to find the joy and authenticity in every moment. Once mastered, we will start to integrate more intricate patterns and sequencing. An emphasis on improvisation and finding one's own voice is structured into each class as well, furthering their experience as a performer of movement.

Grade 8 Dance

Students in 8th grade dance will learn a variety of dance techniques through the study and performance of works by noteworthy choreographers. We will discuss the history of the choreographer and their contribution to the dance world, while learning original dance pieces that will be presented at a share at the end of each semester. Choreographers may include Doris Humphrey (modern), Bob Fosse (jazz/theater dance), Alvin Ailey (modern dance), Rennie Harris (hip-hop), Agnes de Mille (ballet), Busby Berkeley (dance on film), and others.

Digital Video

How do we use the moving image to shape our world? How can sound add life to image and text? How can I make it look like I am flying? These are just a few of the driving questions that shape and inspire our journey through lights, camera and action. Packer Middle school video is hands-on in its approach to

making art. Students write, act, direct, and edit completely original work that is inspired by theme-based assignments designed to develop their sense of video storytelling.

Grade 5 Digital Video

In 5th grade, students become acquainted with iMovie and GarageBand applications by making short movies with still images and sound. They expand their experimentation in sound with an interdisciplinary exploration of songwriting by creating a musical poem and a three-word song in GarageBand.

Grade 6 Digital Video

6th grade builds on their skills as students use sound and image to create a movie that is inspired by what would be their *Best Day Ever!* Their imagination is given free reign as students are introduced to stop-motion animation. They work in groups and use themselves as animated objects in the stories they tell as they find creative ways to move their bodies through the school using animation and sound.

Grade 7 Digital Video

The 7th grade continues with animation as students create fluid hand drawn stop motion animations with sound. Students further develop their technical skills of video production by creating a silent movie. At the heart of this experience is recognizing the importance of sound as it relates to the moving image.

Grade 8 Digital Video

The 8th grade semester continues with growth and creativity that are at the core of the middle school video experience. The 24-second movie inspired by a shoe draws on the animation, video production, and sound design skills that students have learned in the media arts program up to this point. Students then create a music video that pushes their imagination to the limit. The final project, which is at the pinnacle of the program, is to make a longer movie inspired by the techniques of Film Noir.

Theatre

Grade 5 Theatre

In the 5th grade, students will experience what it means to work as an ensemble. They will begin their session with activities that will garner a sense of comfort, creating a safe space for risk-taking. Once they are comfortable within the group, students are free to experience the joyful process of creating small, group theatrical pieces at each class meeting involving tableau, storytelling, pantomime and improvisation. Creating work and performing for their fellow classmates will fill students with confidence that will carry into all disciplines, and will prepare them for continuing their theatre studies in 6th grade.

Finally, students will be cast in a short, scripted performance piece that will be shared at an end of quarter Arts Share with the dance class.

Grade 6 Theatre

6th grade theatre requires an increased awareness of stage presence, story structure and theatre production. Students will begin by continuing to hone their improvisational devising skills built in 5th grade theatre through various acting exercises. They will then be introduced to the process of “adapting” for the theater, and will create original works based on a novel from their 6th grade core English class. Students will write the scenes, learn the basics of staging and then direct another group of actors to perform them. Realizing original work in the classroom will foster a sense of students' pride in their projects, and at the same time will embolden them to take responsibility for their work. All students will perform their plays at an end-of-quarter showing.

Grade 7 Theatre

7th grade theatre focuses on the individual actor as an instrument of theatre. Students will be introduced to a variety of breath, body, vocal and diction warm-up techniques that they will use to craft their own ‘personal warm-up’ by the close of the semester. They will dig deeply into the actor’s process of preparing a role, building a character and how to effectively use the actor's tools of body and voice to communicate ideas to an audience. A fully developed ‘Character Study’ will be conducted based upon characters created from a repertoire of exercises crafted from Uta Hagen’s celebrated technique. Through this work, students will generate an original monologue that will be presented at the end of the semester. The emphasis of the approach will not only be on how to break down the text for analysis, but also on applying the vocal and stage movement techniques of the actor’s process learned at the beginning of the semester.

Grade 8 Theatre

8th grade theatre students focus on building the skills necessary to analyze a text while also being able to live ‘in the moment’ on stage when working creatively off of an acting partner. They will learn how to approach a role and create a character, how to listen to their acting partner with not only their ears but their eyes, and begin to learn the techniques necessary to remain fully engaged and invested in a given set of imaginary circumstances. We will also touch on the various styles of text and acting techniques found throughout theatre history and ultimately select scenes to explore and interpret that represent a diverse selection of life experiences. Through several neutral dialogue scene exercises students will also be asked to sit in the director’s chair in order to begin learning how to tell a story visually while focusing on relationship, circumstance, emotional life and subtext inherent in a scene. In this rich workshop that allows students to utilize all that they have experienced in Middle School theater thus far, students are

given the unique and challenging opportunity to carry a role from page to stage. Every student will be cast in a short scene from a larger dramatic work, and will have the opportunity to perform at an end-of-quarter showing.

Visual Arts

Grade 5 Visual Arts

The 5th Grade Visual Arts program is based on beginning to identify a personal voice as an artist and being confident to take risks through the fine art process. This includes the exploration of materials, moving through a number of different drawing processes and learning a new vocabulary to be able to look at and talk about art. Through an array of different projects the students are invited to problem solve through observational drawing, experimenting with tonal value and scale, and translating their ideas from their imagination into visual images.

Grade 6 Visual Arts

In the 6th Grade Visual Arts program students explore a variety of materials through printmaking, drawing and painting. They are introduced to mixed media, in which students combine many different processes that culminate into one final project. They are introduced to pattern and design and challenged by observational drawing using an array of tools ranging from pencils to charcoal and brushes for ink washes. They are taken through a series of exercises that invite them to have to use their analytical thinking skills to understand composition and space as well as scale and the power of line.

Grade 7 Visual Arts

In the 7th Grade Visual Arts program the students explore the theme of identity through an array of approaches to self-portraiture: traditional drawings, autobiographical story telling, and three-dimensional visual narratives using symbols, object, color and texture. The students work through many different processes where they are asked to dream, experiment, build, and reflect about their experience of going through the process. Presentation is also part of the program where students share their work with other members of their grade for feedback about their work.

Grade 8 Visual Arts

In the 8th grade visual art program students explore media and ideas with increasing skill and depth. In drawing they become more expert in rendering the subtleties of three-dimensional form. In painting they develop a more sophisticated and nuanced color palette as they explore still life and landscape painting. Finally, they experiment with materials in more open-ended ways using their capacity to think with more precision in combination with the freshness of the child's perspective that is still alive in them.

Choral Music

Middle School Chorus is a performance-based group devoted to the study and performance of vocal music from a diverse spectrum of cultures, musical styles, and genres. The class includes training in healthy vocal production and singing technique, ear-training, sight-reading, music literacy, as well as expression and artistry in vocal performance. Each choral group rehearses twice a week and prepares for two yearly concerts. Each grade will meet separately but work on a combined repertoire 5th and 6th Grade Chorus and 7th and 8th Grade to be performed during dress rehearsals/ performances. Students also combine with other the MS choruses for larger MS ensemble experience.

Grade 5 Chorus

In 5th Grade Chorus, students explore the technical and artistic capabilities of their voice. Their experience in class builds on work done in the 4th Grade Chorus and LS Music Program. Through creative movement and dramatic interpretation, students learn to bring the text to life through song. Students begin work on ensemble singing in unison and 2 part singing as well as learning about blend and balance within the ensemble. Students begin to develop various musical skills essential to being a singer: proper intonation, note reading, score reading, rhythmic reading, dynamic interpretation, musicality, proper stage deportment and etiquette. Through a diverse repertoire, students will experience different cultures, different perspectives and to gain a passion for the world's musical diversity through song. The work done in class will guide and nurture each student as they develop their choral music skills and empower them to be independent and confident singers and musicians.

Grade 6 Chorus

In 6th Grade Chorus, students continue to explore and develop their voice through age appropriate repertoire. Students in 6th Grade Chorus learn to develop their solo voice and musical identity not only through group work but also solo and small group opportunities. Through a diverse repertoire, students will experience different cultures, different perspectives and to gain a passion for the world's musical diversity through song. Work on musical skills learned in 5th grade are reinforced and expanded upon and include: proper intonation, note reading, score reading, rhythmic reading, sight reading, dynamic interpretation, musicality, proper stage deportment and etiquette. Students in 6th grade chorus have the skill set to maneuver and understand 2-part scores, simple rhythmic and melodic phrases and notation, use appropriate terminology to describe music and the vocal mechanism.

Grade 7 Chorus

7th Grade Chorus is an opportunity for students to hone and shape their musical skills through vocal music. It builds upon the work done in the 5th and 6th grade choruses. Students become more independent in their work. Students approach text and artistry with a more critical eye to create a deeper musical interpretation. Students have more input in repertoire choices. Students continue to work on good vocal quality and proper vocal technique/posture as well as score reading skills. The students also work on 2

and 3 part harmony and begin work on harmonic analysis of a work. Through a diverse repertoire, students experience different cultures, different perspectives and to gain a passion for the world's musical diversity through song as well as perform in various languages.

Grade 8 Chorus

8th Grade chorus is an opportunity for students to continue to refine and showcase their work through middle school. Students are voiced soprano, alto, tenor/baritone. Repertoire is more challenging and students work on two, three and four part music. Musicality skills are expanded through challenging note reading, score reading, rhythmic reading, and sight reading exercises. Dynamic interpretation, musicality, proper stage deportment and etiquette are continually reinforced. Honing independent musicianship skills, ensemble work, critical listening, and musicality are the fundamental building blocks from which students can express their artistry through song.

Instrumental Music

The predominant feature of our program is applicable literacy. Beginning with an elementary understanding of the workings of a student's chosen instrument, historical significance and methodology then align with creatively rich and rewarding performance opportunities. In the middle school, the primary work is concentrated in methods. By necessity, each skill taught must be given ample pertinence in three ways: short studies, more expansive etudes, and in-class performance.

Brass Program

In the middle school brass and percussion classes, the primary work is concentrated in methods. By necessity, each skill is given ample pertinence in three ways: short studies, more expansive etudes, and in-class performance.

Grade 5 Brass

At these earliest levels in Brass 5, each discipline informs the proper handling, care and maintenance of the instrument, basic note reading, articulate rhythm, tone quality and intonation (pitch assimilation). Culmination of our work together allows our students to invest in the process and perform at year's end for our parents.

Grade 6 Brass

As we progress through the next few years, we allow sensory thinking to help sculpt the imagination, making discovery possible. In Brass 6 our musicians work to invariably invent and play with patterns, using elementary phrasing to affect the beginnings of musical nuance. We begin working with scales, allowing specific notation to dictate melodic content. At year's end, the goal of concertizing becomes possible. We are able to enjoy our class with those of the woodwinds. Seizing the opportunity to pool our

talents, we collectively learn proper ensemble etiquette, the role of the conductor, section playing and how multiple parts must fit together within a performance ensemble. (At this point, the possibility for inclusion in the MS Jazz program becomes possible as well.)

Grade 7 Brass

A continuation of study in Brass/Percussion 7 includes the exploration of multiple key signatures and more complex meters as we continue to use patterns (albeit level appropriate) to build range, endurance and fingering/slide position familiarity. From the student's perspective, there will now occur the semblance of a cohesiveness of sound, especially found in Brass ensembles, since the process involved in producing a musical sound is the same from the highest to the lowest pitched instruments. As we have already introduced full concert band playing to our students, we can assume a continued progression of canonic literature for our students. **Grade 8 Brass**

At the 8th grade level, our Brass students are poised for new discovery, the roles of the interpreter and the composer. With this study, a new lexicon comes into play as well, specifically referencing timbre, texture, and style. Our work includes comparative studies to other art forms, especially dance, as it applies to world music. We trace the development of our own music through the cultural exploration of the major eras in the arts. We continue to expand the parameters of technique, especially as so many of our students continue their work through performance in the upper school ensembles.

Winds Program

Grade 5 Woodwinds

5th Grade Woodwind students learn the fundamentals of playing, beginning with instrument and reed care (clarinets and oboes). Divided into Flute/Oboe and Clarinet classes, students learn to produce a sound by studying proper embouchure, breath support, playing position, articulation, and fingerings. Much of the material is learned by rote in a "call and response" fashion at first, and this methodology continues so each student develops her/his ear as much as the ability to read musical notation. Basic written rhythms, pitches, and expressive devices are mastered through the study of Classical, Folk, Pop, and Jazz genres. The creation of music is emphasized as early as possible through the study of simple improvisation and composition. Students learn how to rehearse and perform as a "Band" - culminating in a musical performance for parents in the spring, or a community outreach concert in a local nursing/residential home.

Grade 6 Woodwinds

In the 6th Grade students expand their musical literacy by incorporating new notes and fingerings, additional time signatures (including "Cut" Time), and more complicated rhythms and subdivisions. Through the study of basic scales, students expand their range into higher and lower areas of the instrument, while increasing finger speed and facility. Proper embouchure, intonation, and hand position

continue to be emphasized, as does varied articulation. Repertoire expands into more intricate duets and rounds, and larger ensembles begin in two forms: students perform their first full "Band" piece in combination with the brass and percussion sections at the final spring concert; and the class performs a "world" music piece for their peers through the interdisciplinary "Silk Road Project."

Grade 7 Woodwinds

7th Grade students continue to increase their instrumental range and knowledge of key signatures through the study of scales and etudes. Their musical literacy expands as they cover 6/8 time, syncopation, chromatics, enharmonics and varied articulation. Students begin using the Garage Band program as a tool for practice and composition. An even greater emphasis is placed on ensemble playing, including dynamics, intonation, and blend. New ensemble opportunities include the 7/8 Jazz Band, in which interested students learn to play and improvise in the jazz "big-band" tradition in addition to the 7/8 Concert Band. Continuing the 6th Grade Band concept, this large ensemble rehearses regularly and performs bi-annually, covering classic band literature as well as Jazz, Latin, and even Pop idioms.

Grade 8 Woodwinds

As 8th Graders, students begin to shift to a mentoring role as they continue to master the intricacies of reading and performing music. This expanded role is particularly emphasized in the combined 7/8 Concert Band and 7/8 Jazz Band, where they lead by example. During woodwinds class, students expand their musical literacy through the continued study of scales - now striving for memorization and expansion into more complicated keys, as well as a basic understanding of the "Circle of 5ths". Their instrumental technique increases by mastering etudes, articulation exercises, and embouchure studies, all at increasingly faster tempos. Repertoire gets more challenging as they cover longer excerpts from Classical, March, Jazz (including improvisation), World, and Pop idioms. Emphasis is placed on preparation for Upper School ensembles as select students begin rehearsing and performing with those ensembles. This involvement raises the individual playing level while introducing them to standard Symphonic Band repertoire.

Strings Program

Grade 5 Strings

In Strings 5, students explore the many uses of music and how it affects their daily lives. Students also discover their own capabilities for making their own music. Through the learning and expansion of different techniques on their instrument, they create unconventional sounds on their instruments to create a soundtrack. By following specific criteria, students also begin to explore the different components of composition and improvisation, and they begin to write their own musical works.
