# Addition and Subtraction up to 100

Addition and subtraction are arguably the most important math topics for every first grade mathematics student.

The memorization of number bonds and the 'feeling' with numbers come with the ability to add and subtract numbers without too much thinking.

Math topics in future school years all elaborate on these important skills. It might be true that endless pages of number crunching materials seem to have no meaning to students, but these skills are so important that we advise every teacher, parent or student to print this booklet and do all pages! The result will be a lot of confidence in math!

This booklet comes with answers and is made for students from all levels. For the weaker and the stronger! It's just like a video game; the more you practice, the better you get!

This booklet is part of our Math in English Skills Series which is based on core math topics underlying the application of math!

These workbooks, including answers, are free and downloadable from our website.

# Multiplication and Division

Multiplication and division are basic topics that students learn in the first 2 grade levels at school. They are with addition and subtraction the most fundamental topics a child will encounter in its math development.

When a child can multiply (and divide) without much thinking and without falling back on adding numbers, it will learn all future math topics much easier. Its all related!

Children who can not, or have difficulties in reciting the times tables will lack speed and accuracy to master more advanced topics in future school years.

Memorization of the times tables is boring and dreadful but absolutely necessary. This workbook contains 20 pages of multiplication and division exercises and is highly recommended for all second grade students.

When a student can do a page within 2/3 minutes it is on the right track. So parents and teachers, print this booklet and use it! Free and downloadable!
