MATH MADNESS 2021

BACKGROUND

The goal of Math Field Day is to provide the students of the Pasadena Unified School District an opportunity to celebrate mathematics through an enriched and fun competitive event that focuses on building team spirit while challenging students to solve advanced mathematical problems.

MATH MADNESS

For 2021, we re-envisioned the event as a virtual opportunity that would provide students with an ongoing opportunity to collaborate with their math team and engage in friendly competition. The tests are based on the mathematics content standards and assess students on an advanced level of mastery and depth of comprehension of the content.

THE PROCESS

Students engaged in two weeks of practice rounds, and then a series of round robin qualifying rounds. From there, the championship bracket was determined. Students participated in the round and then reviewed the problems with their certificated coach, which provided a weekly deep math enrichment experience. Aretelabs adapted their field tested online math competition to work specifically for our district.
