

IMPORTANT

VAPING RISKS

WHAT YOU NEED TO KNOW

*****Several people have died, and hundreds of others have developed a serious lung illness after vaping.*****

We do not yet know which types of e-cigarettes or vape devices are responsible.

The safest thing is not to vape at all.

If you do vape and have any of these symptoms, get medical help right away: coughing, trouble breathing, chest pain, nausea, vomiting, stomach pain or fever.

Never buy products off the street or from unofficial online vendors. Do not modify your vape device or alter the substance.

Public Health
Prevent. Promote. Protect.
