## ***INTRODUCTION AND DISTRICT BACKGROUND***

The Hillsboro School District has contracted with Davis Demographics (DDP) to develop and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes: mapping the District, geocoding a student file that is usually representative of October's official head count, developing and researching pertinent demographic data, identifying future residential development plans, if any, and developing a 7 year student population projection. DDP will then assist the District in developing solutions for housing future student population. This study was prepared to assist the District's efforts in evaluating future site requirements and attendance area changes.

The purpose of this report is to identify and inform the District of the trends occurring in the community; how these trends may affect future student population; and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts. The District can then use this information to better plan for the need, location and timing of facility or boundary adjustments.

The **Sources of Data** section details where the two sources of data, geographic and non-geographic, are collected and how each data item is used in the 7 year student population projection model.

The **7 Year Projection Methodology** section discusses, in detail, how the factors used in the study were calculated and why they were used. These factors include: the calculation of incoming kindergarten classes, additional students from new housing (referred to as student yield), the effects of student mobility, and a detailed review of planned residential development within the District.

The **Student Resident Projection Summary** sections are a review of SY 2017/18's student resident projection results. Included in these sections are a district wide student population projection summary and a projected resident student population summary for each existing attendance area and study area.

While reading this report, it is important to remember that this is a snapshot of current and potential student population based upon data gathered in fall 2017. Population demographics change, development plans change, funding opportunities can change, District priorities can change, and therefore, new projections and adjustments to the overall Facilities Master Plan will continue to be necessary in the future.

**EXECUTIVE SUMMARY**

A return to consistent growth is projected for the District student population over the next 7 years as the region continues to emerge from the long shadow of the Great Recession. Improvements in the housing market have developers ready to increase building activity especially in North Plains and South Hillsboro. Data gathered from builders, planners and sales offices lead Davis Demographics to forecast the construction of 4,561 units over the next 7 years. This combined with the continued migration of people into the regions existing housing stock will be the main contributing factors behind the projected growth for the District over the span of the 7 year projection period.

Overall the District can expect to see its K-12 student population grow in the next 7 years climbing from 20,432 students in 2017 to 22,143 by 2024. This amounts to an increase of 1,711 students or 8.4% over 7 years. Growth at the elementary level will continue to be offset to a degree as birth rates continue to decline and may cause smaller incoming kindergarten classes to be introduced to the District in the coming years. This will cause the District's elementary student population to increase by a total of 468 by 2024. While the District's elementary student population is poised to see a net increase of 468 students over the next 7 years, different regions of the District will experience growth while others will see their student populations decline. Rosedale elementary will see the largest increase by far and is expected to add 429 students. This represents an increase that will double the size of resident students living within Rosedale's attendance area over the next 7 years. The Rosedale elementary attendance areas includes the South Hillsboro Community Plan which includes about 3,000 single family and multi-family units which may be occupied in the near future. Capacity at Rosedale is 560 and may be surpassed as early as Fall 2020 when the attendance area is projected to have about 570 students residing within its attendance area and is expected to climb to as high as 852 students by Fall 2024. This represents the largest challenge for the District. Capacity will need to be added to the area in the form a new elementary School in order to house these students as the South Hillsboro Community Plan will only continue to add additional students beyond 2024 as it is expected take 2 decades to complete.

The District's middle school student population may grow by about 373 students or 11.9% over the next 7 years as the population grows from 3,138 students in 2017 to 3,511 students by 2024. The District should have no issue housing this population as enough capacity exists within in the Districts existing campuses to accommodate the forecasted growth. The Evergreen middle school attendance area is expected to have the largest increase with 170 students over the projection timeframe while South Hills Meadows can be expected to add 86 resident students by Fall 2024. Groner (K-8) will see its 7-8 student population remain consistent throughout the projection timeframe by remaining under 50 students over the span of the 7 year projections period.

The District's high school student population will see the largest increase by adding an additional 869 resident students throughout the projection timeframe through Fall 2024. This amounts to an increase of 13.9% as the high school student population climbs from 6,231 in 2017 to 7,100 in Fall 2024. Glencoe HS capacity is currently 1,632 and may be over capacity by Fall 2020 when the attendance area may have a total of 1,645 resident students. According to the projections the attendance area may grow to a total of 1,803 resident students by the end of the projection timeframe representing growth of about 11.8% when compared to Fall 2017. Century HS may also see its capacity exceeded but at a slower pace, possibly reaching a total of 1,759 resident students by Fall 2024 exceeding capacity of 1,728. Capacity issues at both Glencoe and Century may be alleviated by some simple boundary adjustments between Liberty and Hillsboro High school. Both Liberty and Hillsboro High schools sufficient capacity to house the growing populations in Glencoe and Century.

It is important to understand that the projections in this report are based upon known trends and factors as they currently (Fall 2017) exist. Variables such as but not limited to, construction schedules, market conditions, and economic conditions are subject to changes that are difficult to predict. It is important for the District and Davis to continue to monitor all variables on a yearly basis.

**SECTION ONE – METHODOLOGY****SOURCES OF DATA****Geographic Map Data**

Five geographic data layers were created for use in the 7 year student population projections:

1. Street Centerline Database
2. Study Areas
3. Schools
4. Students – Historical and Current
5. Planned Residential Development

**1) Street Centerline Data**

The street database has associated attributes that contains, but are not limited to, the following fields: full street name, address range and street classification

The main function of the streets is in the geocoding process of the student data. Each student is geocoded to the streets by their given residence address. The geocoding process places a point on the map for every student in the exact location that student resides. This enables DDP to analyze the student data in a geographic manner.

Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets and neighborhood streets are generally used as boundaries for the study areas.

**2) Study Areas**

Study areas are small geographic areas, similar to neighborhoods, and the building blocks of a school district. Study areas are geographically defined following logical boundaries of the neighborhood such as freeways, streets, railroad tracks, or rivers. Each study area is then coded with the elementary, middle and high school that the area is assigned to attend. By gathering information about the district at the study area level, DDP and the District can closely monitor growth and demographic trends in particular regions and identify potential need for boundary adjustments or new facilities.

**3) Schools**

The District provided school facility location information to DDP for the purpose of mapping the District facilities. The school information includes school name, address, unique code and capacity.

**4) Student Data**

**a. Historical Student Data** - Historical enrollment is used to compare past student population growth and trends as well as the effects of mobility (move in, move out from existing housing).

**b. Current Student Data** - A student data file for October 2017 (received by computer data file from the School District) summarized by grade level and by study area is used as a base for student population projections. Existing students were categorized by study area through the geocoding process that locates each student within a particular area based upon their given address. The projections run each of the next 7 years from school year 2018/19 through school year 2024/25.

**c. Student Accounting** The Student Accounting Summary (Table 1) indicates the total student enrollment as of October 15, 2017 and the number of student used in the 7 year student population projections. The projection model is based upon student residence and excludes students residing outside of the District's boundaries, students unable to be address matched and special education students (special education students usually attend a school that services their particular need).

**Student Accounting Summary**  
**School Year 2016/17 Actual Enrollment (10/15/2017)**

|                                                                       |               |
|-----------------------------------------------------------------------|---------------|
| Total Students Provided by District File (October, 2017)              | 20,432        |
| Students Living out of District                                       | -715          |
| Students Unable to be address matched (incorrect address information) | -11           |
| Home School Students                                                  | -41           |
| <hr/>                                                                 |               |
| <b>RESIDENT STUDENTS USED IN PROJECTIONS</b>                          | <b>19,665</b> |

*Table 1- Student Accounting Summary*

### 5) Planned Residential Development

This data was obtained through discussions with the District, city agencies, county agencies and major developers within the district boundaries. Data includes development name, location, housing type, total number of units and projected move in dates (phasing). Phasing for planned housing is factored into the 7 year projections. (See **SECTION 2** for a detailed listing of the planned residential development). In the student population projection DDP includes all Approved and Tentative tract maps in addition to any planned or proposed development that possibly will occur within the projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

### Data Used for Variables

Three sets of data were compiled and reviewed for use in the 7 year student population projections by residence:

1. Births by Zip Code
2. Mobility Factors
3. Student Yield Factors

#### 1) Births by Zip Code Data

Birth data by postal zip code was obtained from the Oregon Health Authority for the years 2000-2016 and roughly correlated to the Hillsboro School District. Past changes in historical birthrates are used to estimate future incoming kindergarten student population from existing housing.

#### 2) Mobility Factors

Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, which is essentially a modified cohort, is applied as a percentage of increase/decrease among each grade for every year of the projections.

**3) Student Yield Factors (SYFs)**

Student Yield Factors were calculated by Davis Demographics from a house count of existing dwelling units throughout the District. This survey includes three housing types: single-family and multi-family attached (town- homes, condominiums, duplexes, triplexes, quads and apartments).

The student yield factors, combined with planned residential development units are used to determine the number of students generated from new residential housing development projects. Student Yield Factor calculations will be discussed again in the **7 Year Projection Methodology** section.

## **7 YEAR PROJECTION METHODOLOGY**

The projection methodology used in this study combines historical student population counts, past and present demographic characteristics, and planned residential development to forecast future student population at the study area level. District-wide projections are summarized from the individual study area projections. **These projections are based on where the students reside and where they should be attending school. We use the actual location of where the students reside, as opposed to their school of enrollment, in order to provide the most accurate estimate of where future school facilities should be located.** The best way to plan for future student population shifts is to know where the next group of students will be residing. The following details the methodology used in preparing the student population projections by residence.

### **7 Year Projections**

Projections are calculated out 7 years from the date of projection for several reasons. The planning horizon for any type of facility is typically no less than five years, often longer. Seven years are usually sufficient to adequately plan for a new facility. It is a short to mid term solution for planning needs. Projections beyond seven years are based on speculation due to the lack of reliable information on birthrates, new home construction and economic conditions.

### **Why Projections are Calculated by Residence**

Typically, school district projections are based on enrollment by school. However, this method is inadequate when used to locate future school facility needs, because the location of the students is not taken into consideration. A school's enrollment can fluctuate due to variables in the curriculum, program changes, school administration and open enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

The method used by DDP is unique because it modifies a standard cohort projection with demographic factors and actual student location. **DDP bases its projections on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside.**

The best way to plan for facility requirements is to know where the next group of students will be residing. The following details the methodology used in preparing the student population projections.

**PROJECTION VARIABLES**

Each year of the projections, 12<sup>th</sup> grade students graduate and continuing students progress through to the next grade level. This normal progression of students is modified by the following factors:

**1) Incoming Kindergarten**

Live birth data is reported to the Oregon Health Authority by the resident postal zip code of the mother. DDP uses the birth data by zip code roughly correlating to the District boundary and applies the data accordingly. If need be a different birth factor can be applied to various areas of the District.

Incoming kindergarten classes, for existing homes, are estimated by comparing changes in past births in the area. Table 2 illustrates the total births for each zip code in the Hillsboro School District from 2000 to 2016. DDP assumes the current kindergarten class (2017/18) was born in five years ago (2012). Future incoming kindergarten classes are estimated by comparing the number births in 2012 to the number of births in 2013 – 2016. DDP compared the total births in 2012 to the total births in 2013, to determine a factor for next year's kindergarten class (2018/19). The 2012 births were compared to 2014 (2019/20's K class), 2012 to 2015 (2020/21's K class) and 2012 to 2016 (2021/22's K class). Births for zip code 97113 in 2012 may have been an anomaly so an average of the subsequent known births were used providing an average of 0.816 factor.

| Zip Code           |        |        | Zip Code           |        |        | Zip Code           |        |        | Zip Code           |        |        | Zip Code           |        |        | Zip Code           |        |        |
|--------------------|--------|--------|--------------------|--------|--------|--------------------|--------|--------|--------------------|--------|--------|--------------------|--------|--------|--------------------|--------|--------|
| 97007/97078        |        |        | 97113              |        |        | 97123              |        |        | 97133              |        |        | 97124              |        |        | 97124              |        |        |
| Year of Projection | Births | Change | Year of Projection | Births | Change | Year of Projection | Births | Change | Year of Projection | Births | Change | Year of Projection | Births | Change | Year of Projection | Births | Change |
| 2001               | 850    | 94.9%  | 2001               | 268    | 117.5% | 2001               | 753    | 108.2% | 2001               | 51     | 121.4% | 2001               | 696    | 77.7%  | 2001               | 696    | 77.7%  |

### Student Mobility Factors

Student mobility factors further refine the 7 year student population projections. Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage of increase/decrease to each grade for every year of the projections.

A net increase or decrease of zero students over time is represented by a factor of **1.000**. A net student loss is represented by a factor less than **1.000** and a net gain by a factor greater than **1.000** (see Table 4).

Example:

$$\begin{array}{rcl} & 100 & \text{Kindergarten students in fall 17/18} \\ \times & 1.03 & \text{(Brookwood ES 1st grade mobility)} \\ \hline = & 103.0 & \text{1st grade students in fall 18/19} \end{array}$$

Having historical student data categorized by Study area is extremely helpful in calculating accurate Student Mobility Factors. DDP was able to utilize the last four year's (school years 2014/15, 2015/16, 2016/17, and 2017/18) student data. The 2014/15 student data was compared to 2015/16, 2015/16 to 2016/17, and 2016/17 to this year's student data at the Study area level. Grades 1-12 Mobility were all calculated to correspond with the elementary school attendance areas.

| SCHOOL             | K to 1 | 1 to 2 | 2 to 3 | 3 to 4 | 4 to 5 | 5 to 6 | 6 to 7 | 7 to 8 | 8 to 9 | 9 to 10 | 10 to 11 | 11 to 12 |
|--------------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|---------|----------|----------|

Table 3- Mobility Factors

#### 4) Student Yield Factors

The Student Yield Factors, when applied to planned residential development units, determine how many additional students will be generated from new construction within the District (see **Section Two** for details on planned residential development)

Two sets of data are required to calculate Student Yield Factors: a current student file (provided by the District) and current housing unit data (taken from the Washington County tax lot files). Each student record and tax assessor record is geocoded by their given address. The two database sets are then linked by common address. This allows DDP to associate each student with a specific housing unit. For the District, two general categories of housing units were analyzed; Single-Family (SF), Multi-Family (MF).

Before the SYFs can be calculated from the current housing stock, the year of construction for each housing type must be determined. In general, new housing attracts young families with elementary school aged children. Over the next 12 to 15 years, the children grow older and pass through the grades. This cycle is then repeated throughout the life of the home. Identifying the year of construction and number of current resident students in recently built housing units assists in estimating the number of new students generated from future residential development.

In addition, other elements apart from the year of construction can be assessed. These elements include, but are not limited to, housing type, number of bedrooms, geographic location (study area), value of home, etc. Once a determining element is decided upon, simple calculations are performed to produce a Student Yield Factor. The total number of units for that housing type then divides the number of current students residing in each housing type.

DDP calculated two different Student Yield Factors in December 2016. Single Family units constructed within the last 5 years were used to calculate yield factors for each of the District's high school attendance zones. In order to have a more adequate sample size for Multi-Family units constructed within the last 10 years were used to calculate yield factors for each of the District's high school attendance zones. These units are similar in size and location to the planned residential development. It was decided to apply that SYF to the planned residential development within the District over the next seven years. This sample should reflect a reasonable number of students expected from planned residential developments

Red = Yields used for Non Transportation Oriented Developments in Liberty HS

Table 4 – Student Yield Factors

**5) Planned Residential Development**

Closely related to the Student Yield Factors are planned residential development units. Planned residential development data is collected to determine the number of new residential units that will be built over the time frame of the student population projections. The units built within the next 7 years will have the appropriate SYF applied to it to determine the number of new students the planned residential development will yield.

This data was obtained through discussions with the District, city agencies, county agencies and major developers within the District boundaries. Data includes development name, location, housing type, total number of units and projected move in dates (phasing). Phasing for planned housing is factored into the 7 projections. (See **SECTION 2** for a detailed listing of the planned residential development).

In the student population projection by residence DDP includes all Approved and Tentative tract maps in addition to any planned or proposed development that possibly will occur within the projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

**APPLYING THE VARIABLES TO GENERATE THE PROJECTIONS**

The following paragraphs summarize how DDP uses the factors to determine the student population projections. Remember that these projections are based on residence.

Hillsboro School District has been divided into 502 study areas. Every study area is coded with the school code of the elementary, middle and high schools attendance area it falls within. The residential projections are calculated at the study area level. This means that DDP conducts 502 individual projections that are based upon the number of students residing in each study area.

The first step in calculating the projections is to tally the number of students that live in each study area by each grade (Kindergarten through 12<sup>th</sup> grade). The current student base (school year 2017/18) is then passed onto the next year's grade (2018/19's K become 2018/19's 1<sup>st</sup> graders, 2018/19's 1<sup>st</sup> graders become 2019/20's 2<sup>nd</sup> graders, and so on). After the natural progression of students through the grades is applied, then Birth Factors are multiplied to the current kindergarten class to generate a base for the following year's kindergarten class.

Next, a Mobility Factor is applied to all grades. Again, these factors take into account the natural in/out migration of students throughout the District. The mobility factor is applied to each student in every grade (K-12). A unique mobility factor is applied to each elementary school attendance area determined by the mobility factor study.

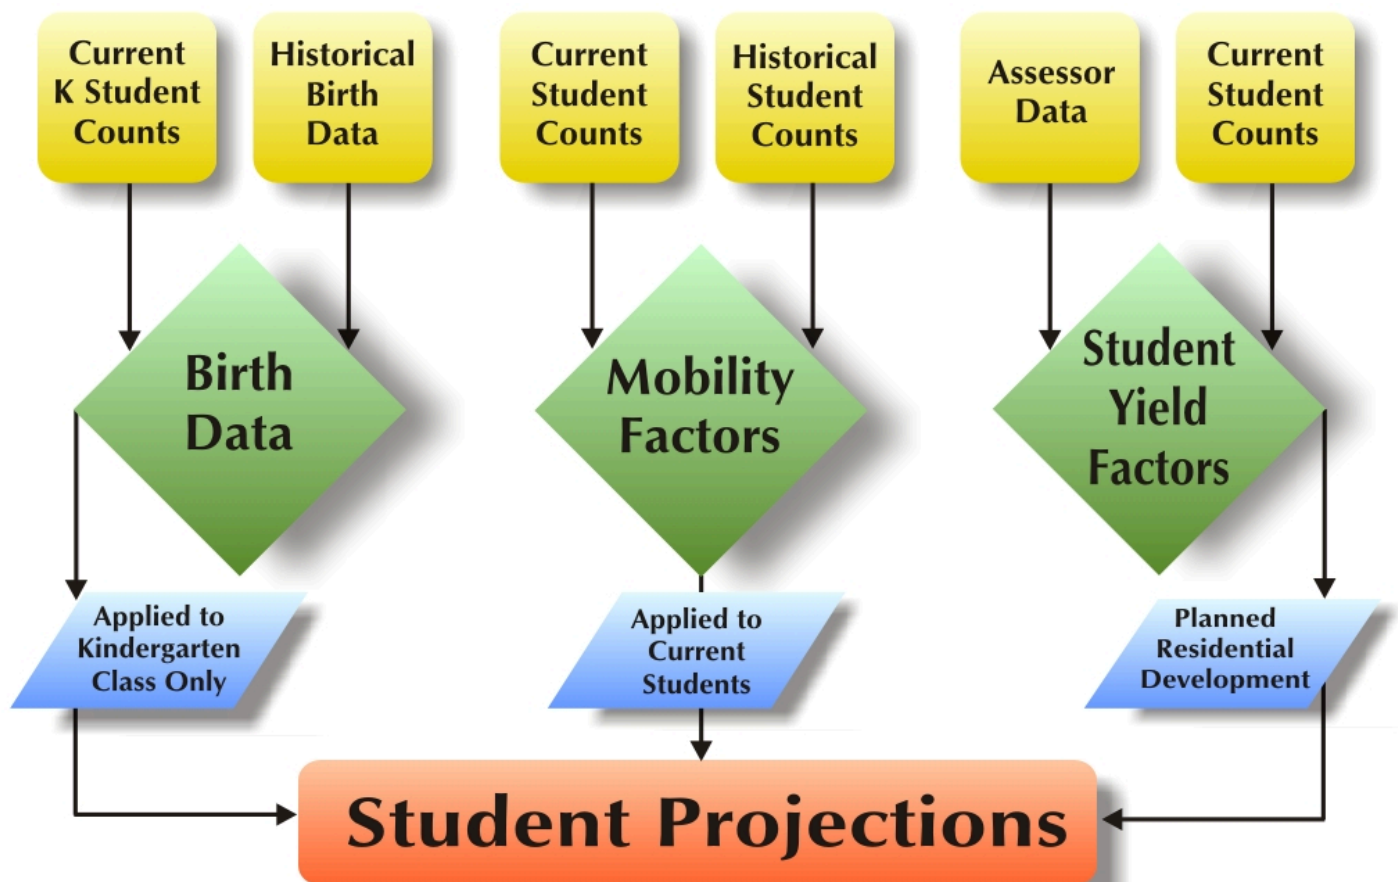

The last essential layer applied to the projections deals with additional students from planned residential development. This is a simple calculation, again conducted at the study area level, where the estimated number of new housing units for a particular year is multiplied by the appropriate Student Yield Factor. For example, if 100 single family detached (SF) units are to be built in a specific study area in a given year, then you would multiply this number (100) by the SFD K-6 student yield factor (.167) and the resulting number (16.7) is divided evenly among the seven grades.

To finish generating the projections by residence, the same process is conducted for each of the 502 study areas. Once the projections have been run at the study area level, then it is simple addition to determine projections for each of the District's attendance areas or for a district-wide summary. For example, the residential projections for the Brookwood Elementary attendance area is simply the summary of all of the study areas that make up this specific attendance area (see Section Five, Six and Seven) for the projections of each elementary, middle and high school attendance areas).

The District Summary for the projections (Section Four) is a total summary of all 502 study areas. The projections exclude all of the students that attend a District school but live completely outside of the District's boundaries, and students unable to be geocoded, special education students and independent study students. These students are factored back into the projections by calculating their current overall percentage of student population, applying the percentage to future years and adding it to the resident projections (please see the Attendance Matrices in Section Three for a breakdown of the out-of-district and unmatched students by school). DDP adds the current total out-of-district and unmatched students to each year of the projections because there is no way to accurately forecast these students in the future.

Current and historical students, geographic data and non-geographic data are used to calculate the factors used in the student population projections by residence. These factors are applied using SchoolSite and projections are calculated for each study area for each grade.

## Projections by Residence Flowchart

***SECTION TWO – PLANNED RESIDENTIAL DEVELOPMENT***

This data was obtained through discussions with the major developers within the District boundaries, city and county planners as well as local developers. A database and map of the planned residential development was created, including, when available, project name, location, housing type, total number of units and estimated move in dates (phasing schedule). Projected phasing is based upon occupancy of the unit and is used to help time the arrival of students from these new developments.

In the student population projection by residence DDP includes all Approved and Tentative tract maps in addition to any planned or proposed development that possibly will occur within the seven year projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

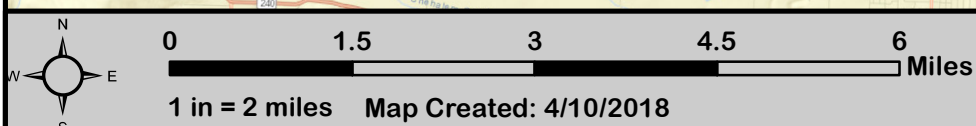

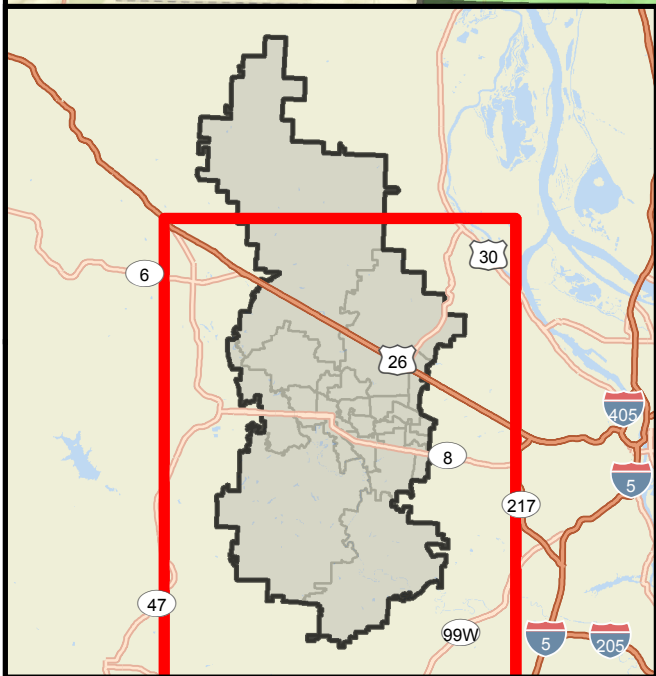

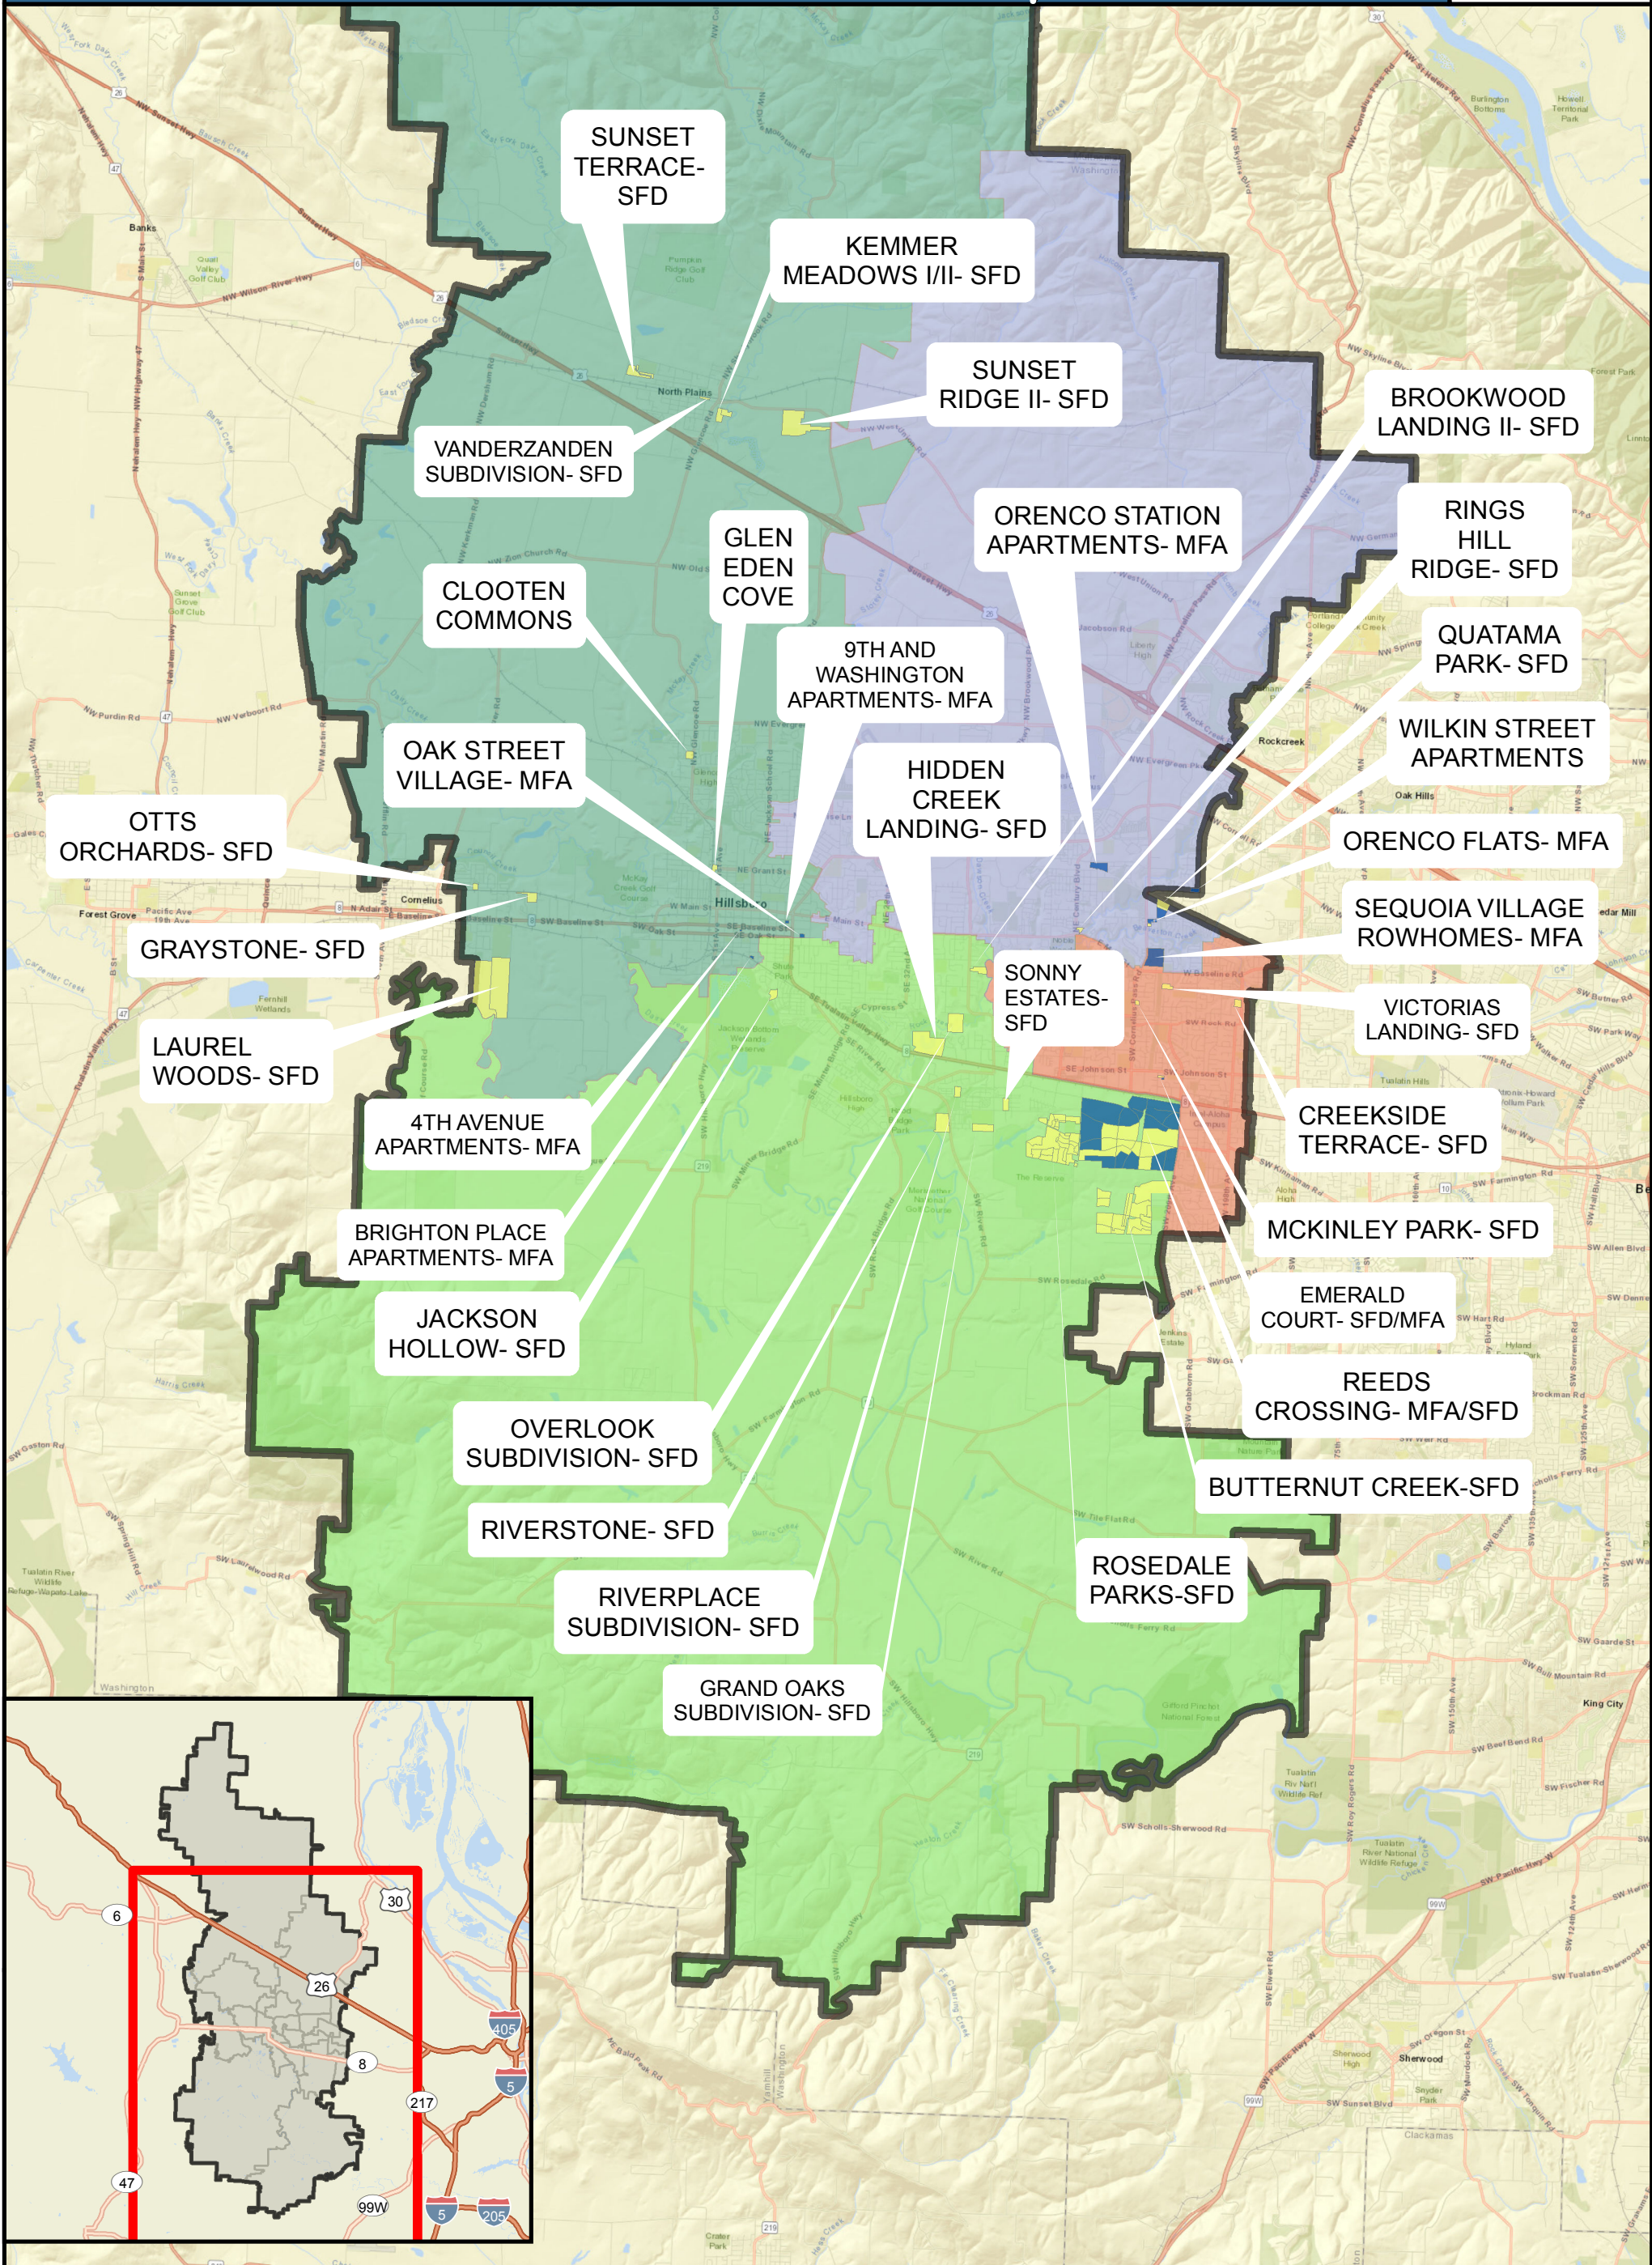

Total SFD = 2986    Total MFA = 1608

| Study Area | 10/2017 - 10/2018 |     | 10/2018 - 10/2019 |     | 10/2019 - 10/2020 |     | 10/2020 - 10/2021 |     | 10/2021 - 10/2022 |     | 10/2022 - 10/2023 |     | 10/2023 - 10/2024 |     | Elementary School | Middle School    | High School  |

# Hillsboro School District

## 2017-18 Residential Development

Multi-family attached (MFA)  
Single family detached (SFD)

### **SECTION THREE – ATTENDANCE MATRICES**

Three Attendance Matrices have been included to provide a better understanding of where students reside and where they attend school. **Remember, DDP projections are based upon where the students reside, not the students school of enrollment. This method allows DDP to provide the most accurate forecast of where shifts in student population may occur and changes to future facilities (if necessary) should be located.** Therefore, since the projections are based upon where the students reside, the figures we use as a base for each school's resident projection may be slightly higher or lower than the actual reported enrollment for each school. The best way to plan for future facilities is to know where the next group of students will be coming from, not necessarily which school they are currently attending

Attendance matrices act as a check and balance for student accounting. Illustrating where the students reside (in what School of Residence) based upon their geocoded address and which school they attend (School of Attendance) based upon District provided student data. It is essential to show how the students used in the projections match up to the District's records of enrollment for each school. Furthermore, intra-district transferring patterns can be determined by comparing School of Residence data to the School of Attendance data.

#### **READING THE MATRIX**

Starting with the K-6 Elementary School Attendance Matrix, let's begin with Brookwood as an example. Starting with the first column to the right of all percentage fields (# K-6 students residing in Attendance Area), we see that there are 383 total K-6 students living within the Brookwood attendance area and we see that the campus has a capacity of 616 students. Moving to the next column with the Brookwood heading, there are 295 K-6 grade students attending Brookwood and reside in the Brookwood attendance area. Continuing downward, 1 student is attending Brookwood that resides in the Butternut Creek attendance area. Next it shows that 7 students attend Brookwood and reside in the Eastwood attendance area, and so on.

The row Out of District refers to students living completely outside of the Hillsboro School District, but attending one of the District's schools. There is 1 Out of District students attending Brookwood. Unmatched refers to students not geocoded due to insufficient address information. There are 0 unmatched students attending Brookwood. Total Students Enrolled is the total number of students attending a school regardless of where they reside, and reflects the District's enrollment counts for each school. There are 345 students attending Brookwood.

The next step is to read across the matrix, beginning with the Brookwood attendance area row. We know 295 represents the total number of K-6 grade students residing and attending Brookwood. The next column, Butternut Creek, refers to the number of [K-6] grade students residing in the Brookwood attendance area, but attend Butternut Creek there is 1 student residing in the Brookwood attendance area but attending Butternut Creek. The Total In-District Enrollment row is the actual number of students used as the base or actual number for each attendance area in the 2016/17 projections.

All other matrices can be read in the same manner. The following are include matrices for the elementary, middle and high school grade configurations and can be used as a checks and balance between the total number of students enrolled at each school and the attendance area where the students actually live.

***SECTION FOUR – DISTRICT WIDE STUDENT POPULATION PROJECTION***

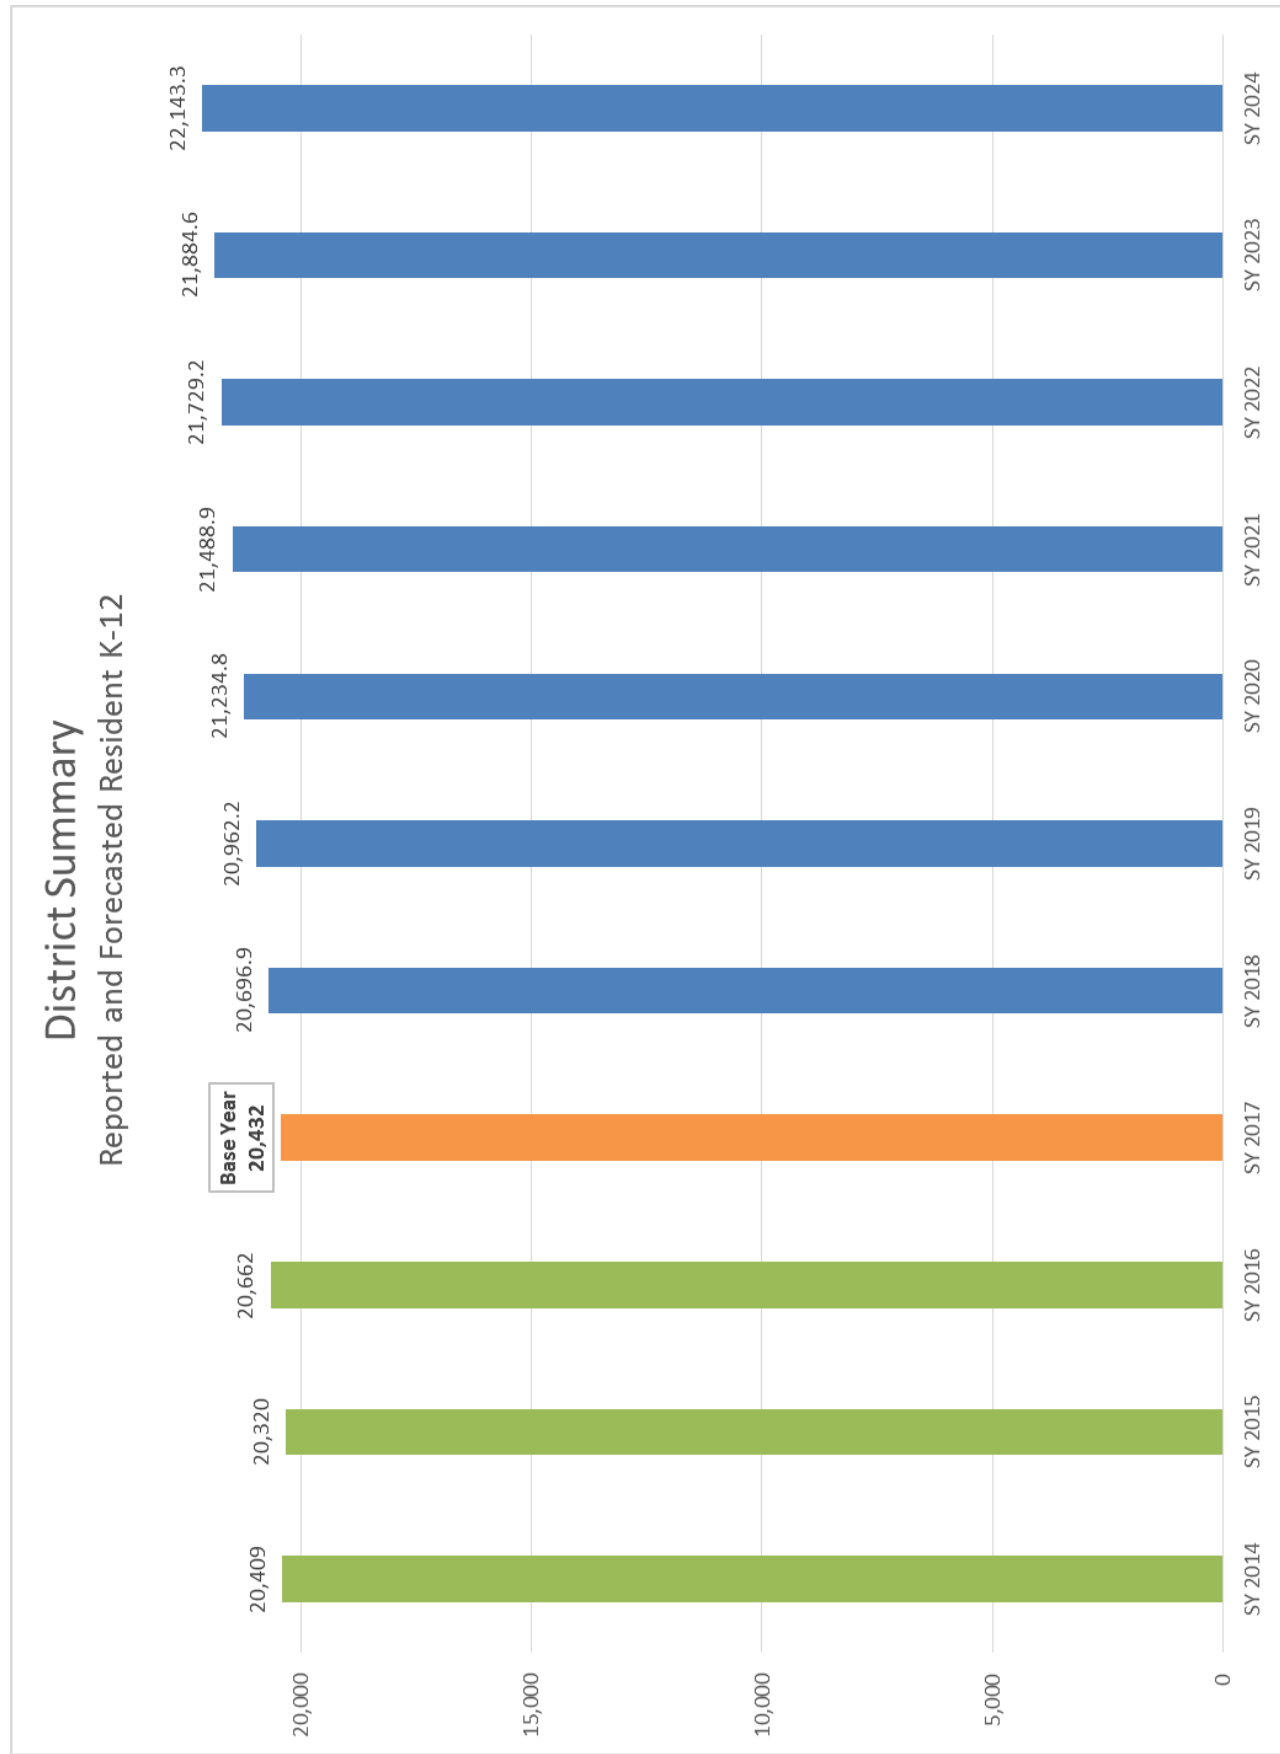

The student population is projected out 7 years for each of the study areas, attendance areas and for the entire Hillsboro Unified School District. The District Wide Summary enables the District to see a broad overview of future population shifts and what impact these shifts may have on existing and future facilities. Each attendance area is summarized to give a more local view of population changes and identify variances in the district. The study area listings enable the District to monitor student population growth or decline in neighborhood areas within the District.

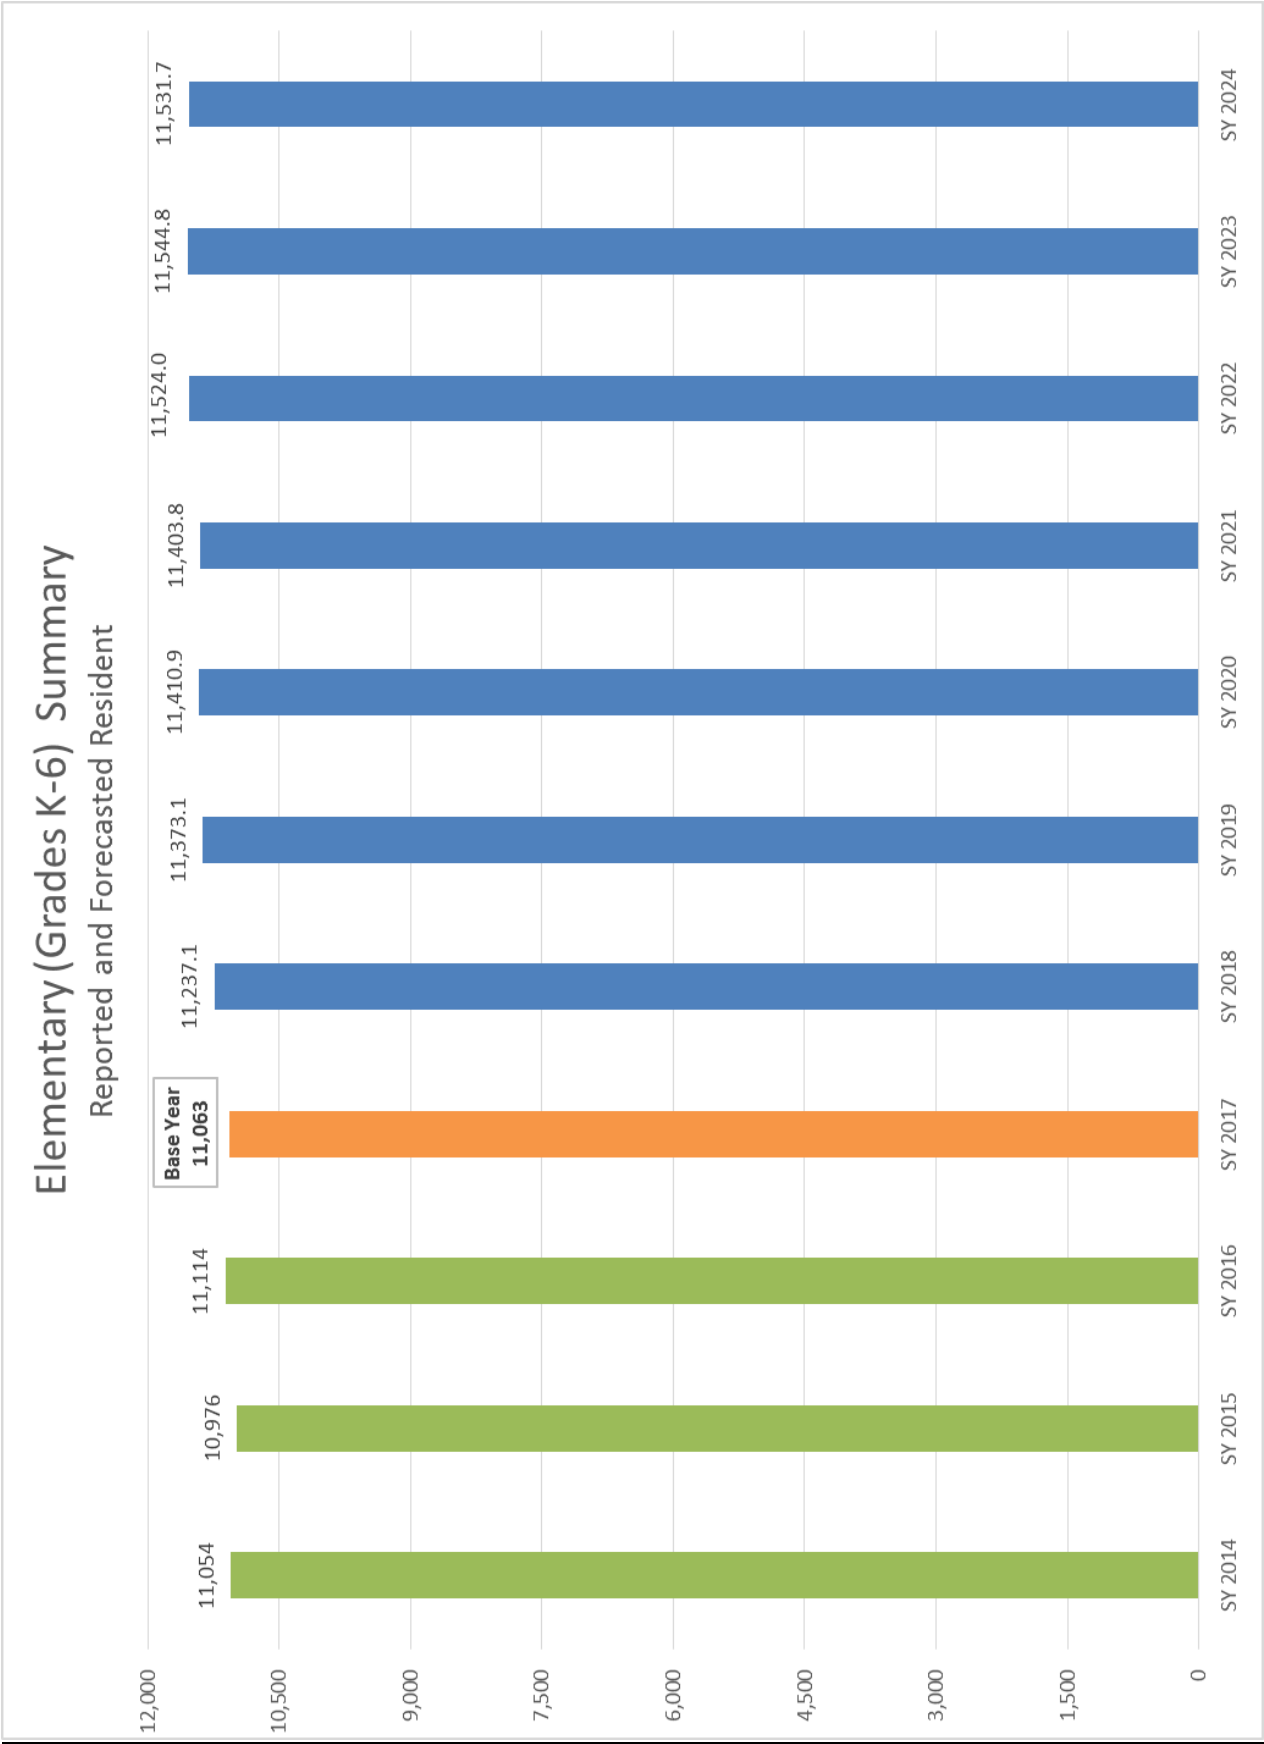

Together, these projection summaries, present the means for identifying the timing of future population shifts and overall facility adjustments needed to accommodate these shifts. At any time, study areas and their projected resident students can be shifted between schools to assist in balancing enrollment, school consolidation among various other analyses.

Projections are calculated by "Residence", not actual enrollment at each site.

### District Wide Projection Trends

*The basic units in the projections are the individual study areas. There are currently 502 study areas within the Hillsboro School District. The current attendance areas are made up of specific study areas (see **APPENDIX A** for a listing by study area). The entire District Summary is simply the compilation of all 502 study areas (please see the large map of the District's study areas and study area numbers). For each study area, the student counts are projected out over seven years (Fall 2018 through Fall 2024).*

Currently, HSD has a total of twenty five elementary (K-6) schools, five middle (7-8) schools, and four comprehensive (9-12) high schools. In Fall, the District reported a total of 11,063 K-6, 3,138 7-8 students and 6,231 9-12 students for a total of 20,432 K-12 students enrolled in the District. Over the next seven years the District may see a period of growth that will bring the District's total enrollment to 22,143 K-12 students by the Fall of 2024. By the end of seven years the District will see its resident K-5 student population increase by 469 students. Similarly the 7-8 student population for the HSD is expected to increase as well by 374 students over the next seven years. Currently (Fall 2017), the District has 3,138 7-8 students and may have a high point of 3,512 7-8 students by fall 2024. The Hillsboro SD high school student population is expected to see growth over the next seven years. Growth is expected to take the high school student population to a peak of 7,100 by the end of the projection timeframe in 2024. Over all, this amounts to a growth of 1,711 students at the end of seven years.

Over the next seven years, the resident K-6 student population is expected to grow. A net increase of 469 resident students is forecasted for the next 7 years. The growth will be observed throughout the District with 10 of the District's 25 attendance areas expected to see growth due reported births, mobility and residential development. The Districts 7-8 student population is expected to grow to 3,512 students by 2024. This represents a net gain of 373 students or 11.9%. The projected growth within the middle school student population will be driven by positive student mobility as classes are expected to grow as they progress from one grade to the next in addition to the new students that will come to the District as a result of the new homes that will be constructed over the projection timeframe. Growth in the middle school student population may be attributed to mobility as smaller class sizes are replaced by larger class sizes. Middle school classes will be larger than the classes they are replacing as all of the incoming grades are larger with the exception of this year's six grade class of 1,467.

With moderate increase projected for the Elementary and middle school student populations an even larger gain is forecasted for the high school student population. The District is expected to add an estimated 869 high school students by 2024. This amounts to an increase of 13.9% as the high school student population climbs from 6,231 in 2017 to 7,100 by 2024. The same forces causing the growth within the elementary and middle school student population will be at work causing the high student population to grow. As classes progress towards the high school grades they will grow as people continue to relocate to the area in both new and existing homes leading to larger incoming freshmen classes. Over time the incoming freshman classes are expected to become larger than the graduating senior classes and cause the high school student population to swell.

***It is important to understand that the projections in this report are based upon known trends and factors as they currently (Fall 2017) exist. Variables such as but not limited to, construction schedules, market conditions, and economic conditions are subject to changes that are difficult to predict. It is always the recommendation of Davis Demographics that the District continue to closely monitor the factors on a regular basis and revisit the projections to ensure that the latest information is considered and thus enabling staff to make decisions based on the most current information available.***

## Elementary School Attendance Area 7 Year Change

### Elementary Attendance Area Student Population Projection Trends

Over the next seven years, the resident K-6 student population is expected to grow by 468 students by the end of the projection timeframe fall 2024. The growth will be observed throughout the District with 10 of the District's 25 attendance areas expected to see growth due residential development, births and mobility (families moving into the district). In analyzing the attendance area projections, the following schools **are** listed in order of greatest increase to greatest decline over the next seven years: Rosedale (101.5%), North Plains (80.8%), Free Orchards (30.7%), Jackson (14.6%), Patterson (14.9%), Tobias (8.9%), Mooberry (6.9%), West Union (3.1%), Imlay (1.7%), Groner (6.3%), WL Henry (-0.6%), McKinney (-0.9%), Lenox (-1.4%), Indian Hills (-1.3%), Butternut Creek (-1.6%), Farmington (-7.2%), Brookwood (-6.4%), Lincoln (-6.1%), Reedville (-15.2%), Quatama (-11.1%), Minter Bridge (-12.3%), Orenco (-10.8%), Ladd Acres (-17.9%), Eastwood (-20.2%) and Witch Hazel (-21.2%).

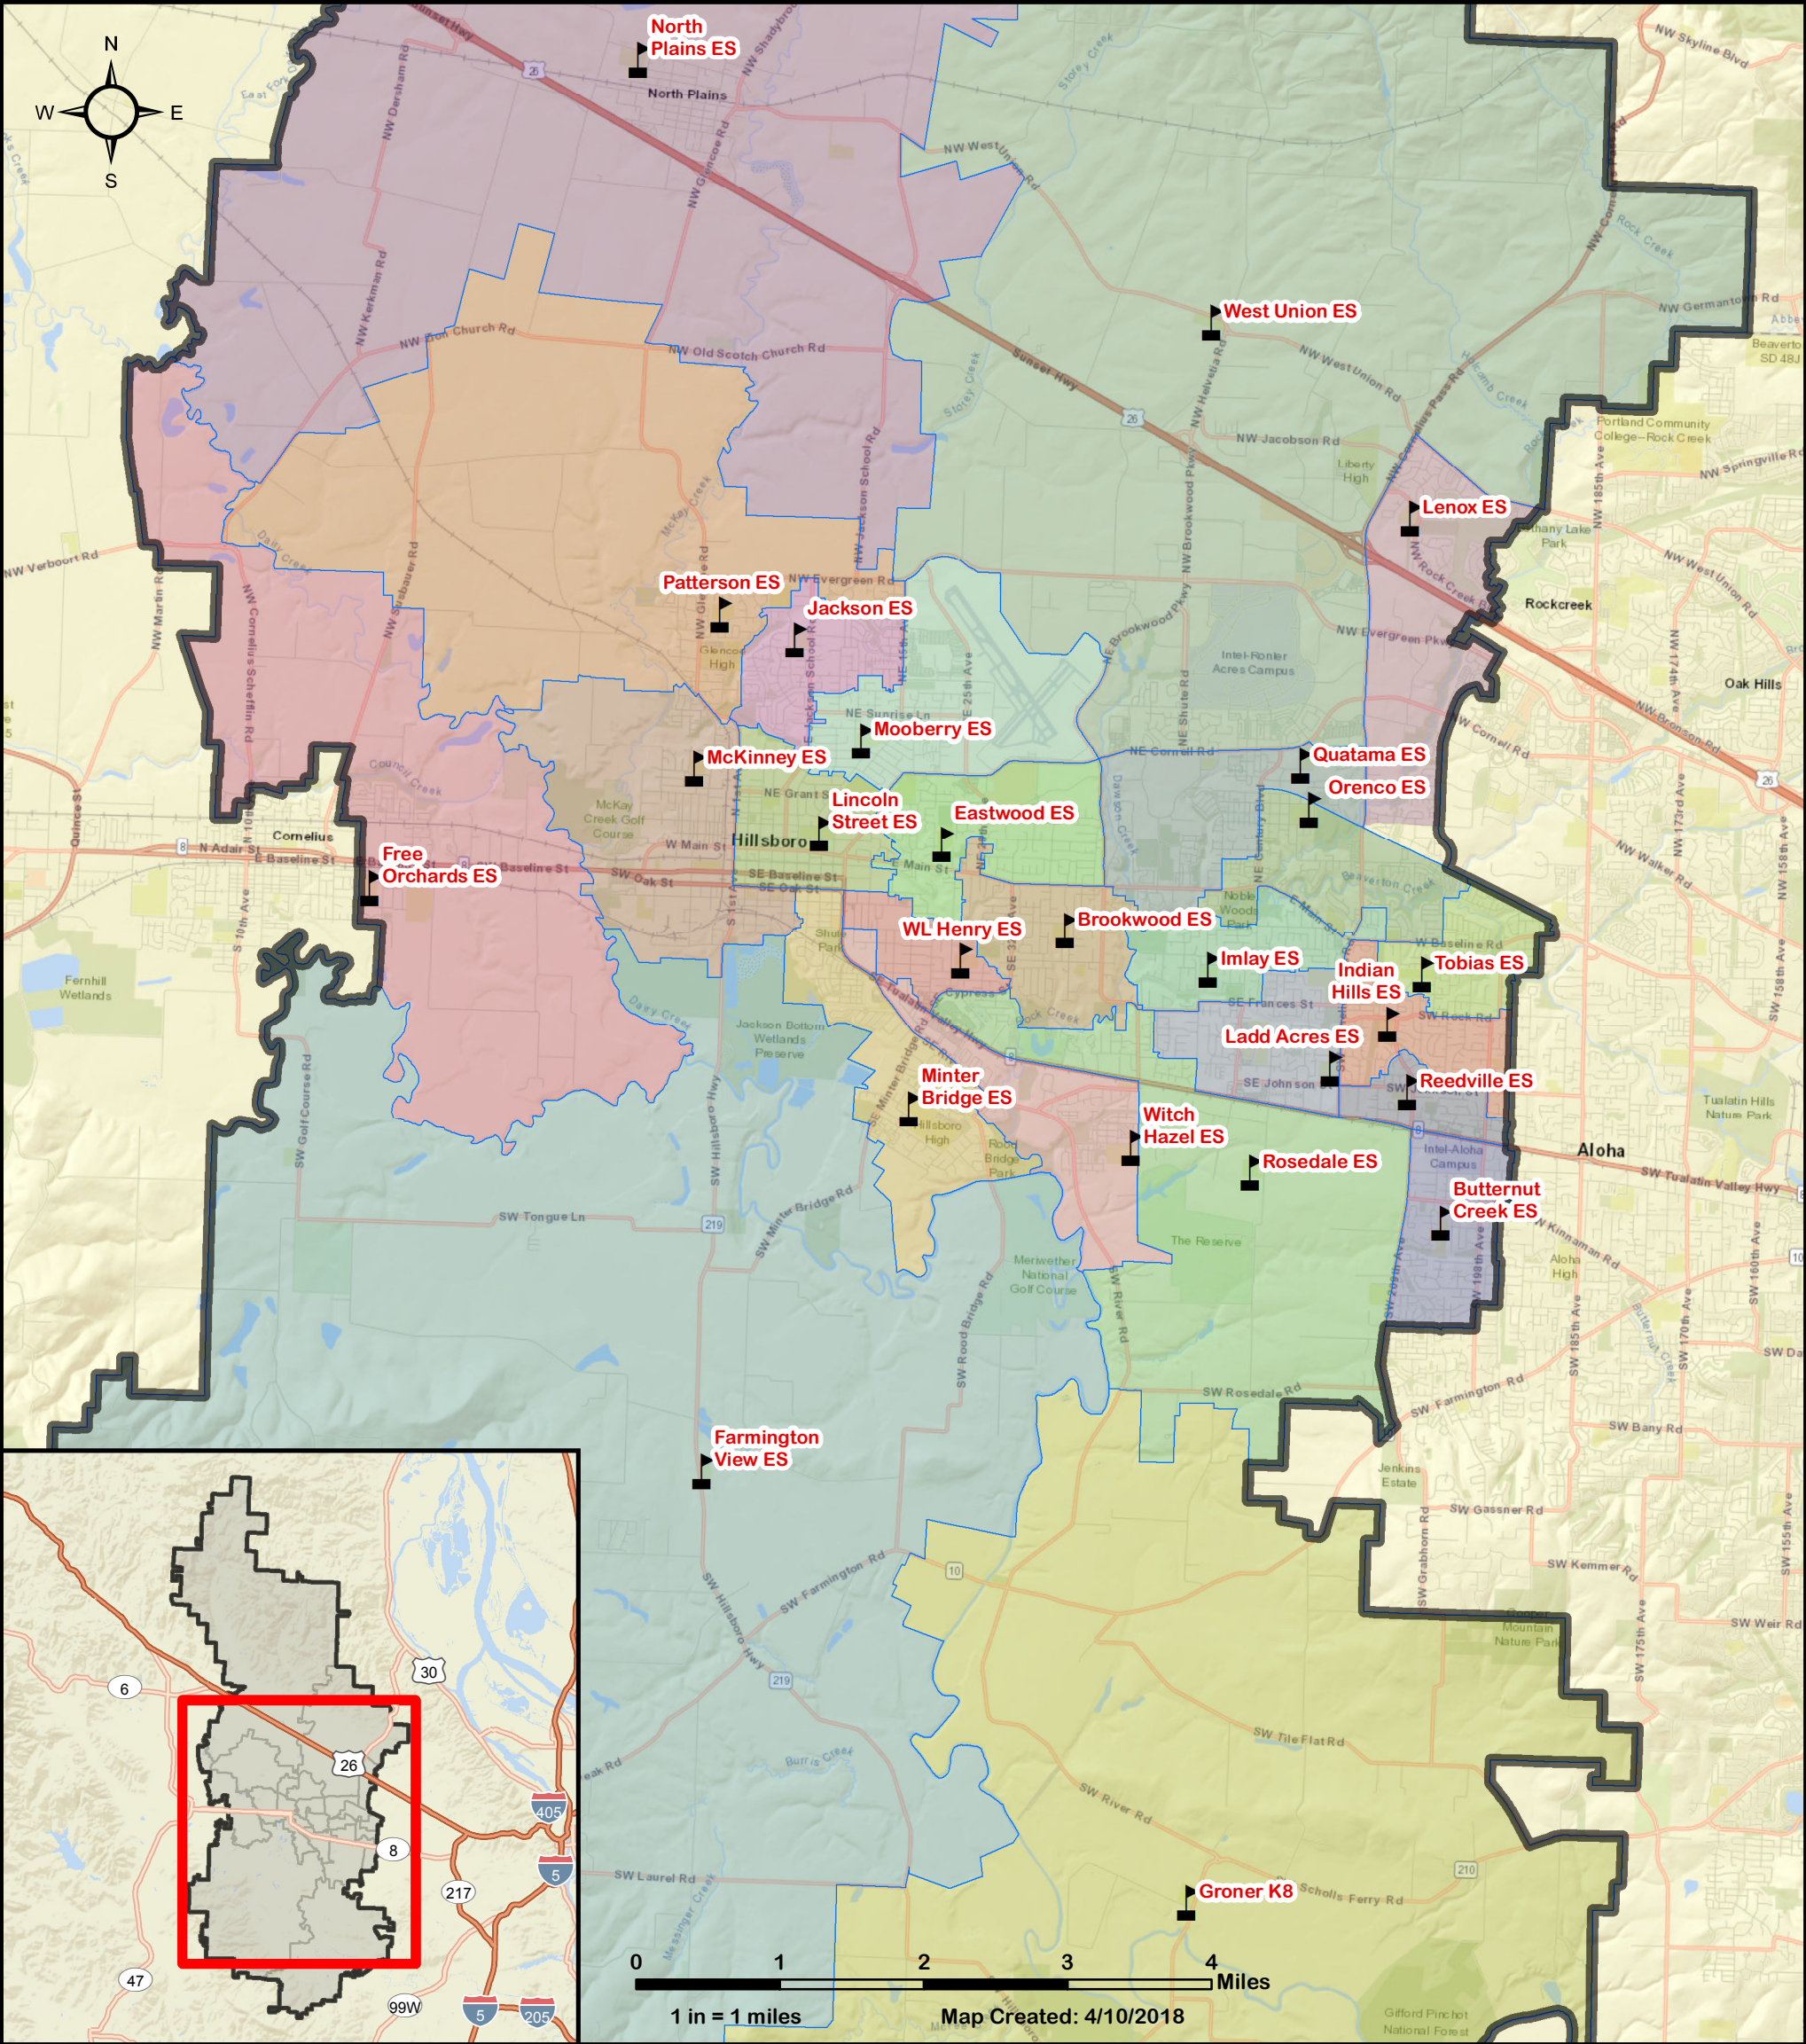

Both Rosedale and North Plains Elementary school attendance areas will see increases in student population mostly due to new residential housing and healthy mobility. Rosedale ES attendance area will see an increase in its student population of 429 students or 101.5% over its current student population. The current capacity at Rosedale ES is 560 which according to the projections may be exceeded in Fall 2020 when the attendance area may expect to see a total of 570 and then continue to grow through the projection timeframe to 852 resident students living within the attendance area. North Plains may be expected to see its student population to add 299 students or 80.8% growth over the span of the projection timeframe. This would bring the student population of the attendance area to a total of 669 students by 2024. This is over the campus capacity of 448 students. This will be an area the District will need to continue to watch moving forward as future changes in building plans for the area could possibly cause the capacity of the campus to be exceeded sooner.

While capacity may become an issue for the 2 of the District's elementary attendance areas over the next 7 years, there are several schools throughout the district that may experience decline in student populations over the 7 year projection timeframe. Incoming declining class sizes can explain the decline in student populations at 15 of the schools declining resident student populations. The projection model assumes kindergarten classes of similar classes will follow. Unless the current kindergarten classes are anomalies the resident student populations of each of these attendance areas will see steady declines. Witch Hazel may see a decline in student population of about 115 resident students for its attendance area over the projection timeframe. This accounts for 21.2% of the resident student population for that attendance area through Fall 2024.

Over all the District's elementary student population is projected to grow by 468 during the same period. In the Fall of 2017 the District reported a total of 11,063 K-6 students. This number is expected to climb to a peak of 11,532 resident students by 2024. In the end this amounts to a net increase of 468 over 7 years. Attendance areas poised to see the most development activity are expected to see some of the largest increases while regions lacking development are much more likely to see declining student populations over the span of the projection period.

# Hillsboro School District

**Middle School Attendance Area Student Population Projection Trends**

The District's middle school (7-8) student population may grow to 3,511 students by 2024. This represents a net gain of 373 students or 11.9%. District as a whole will see an increase in its middle school student population, different regions of the District will contribute and continue to see growth at different rates. If all variables (Development, Births and Mobility) currently attributed to the districts growth remain the same, the districts middle schools will continue to grow throughout the projection timeframe. The largest gain in the middle school student population is projected to occur within the Evergreen middle school attendance area and is expected to add 170 students by 2024 bringing its student population up from 794 students in 2017 to 964 resident students by 2024, an increase of 21% over 7 years. Growth here is expected to be driven by development as the area is set to see an estimated 1,100 units constructed over the span of the projection timeframe.

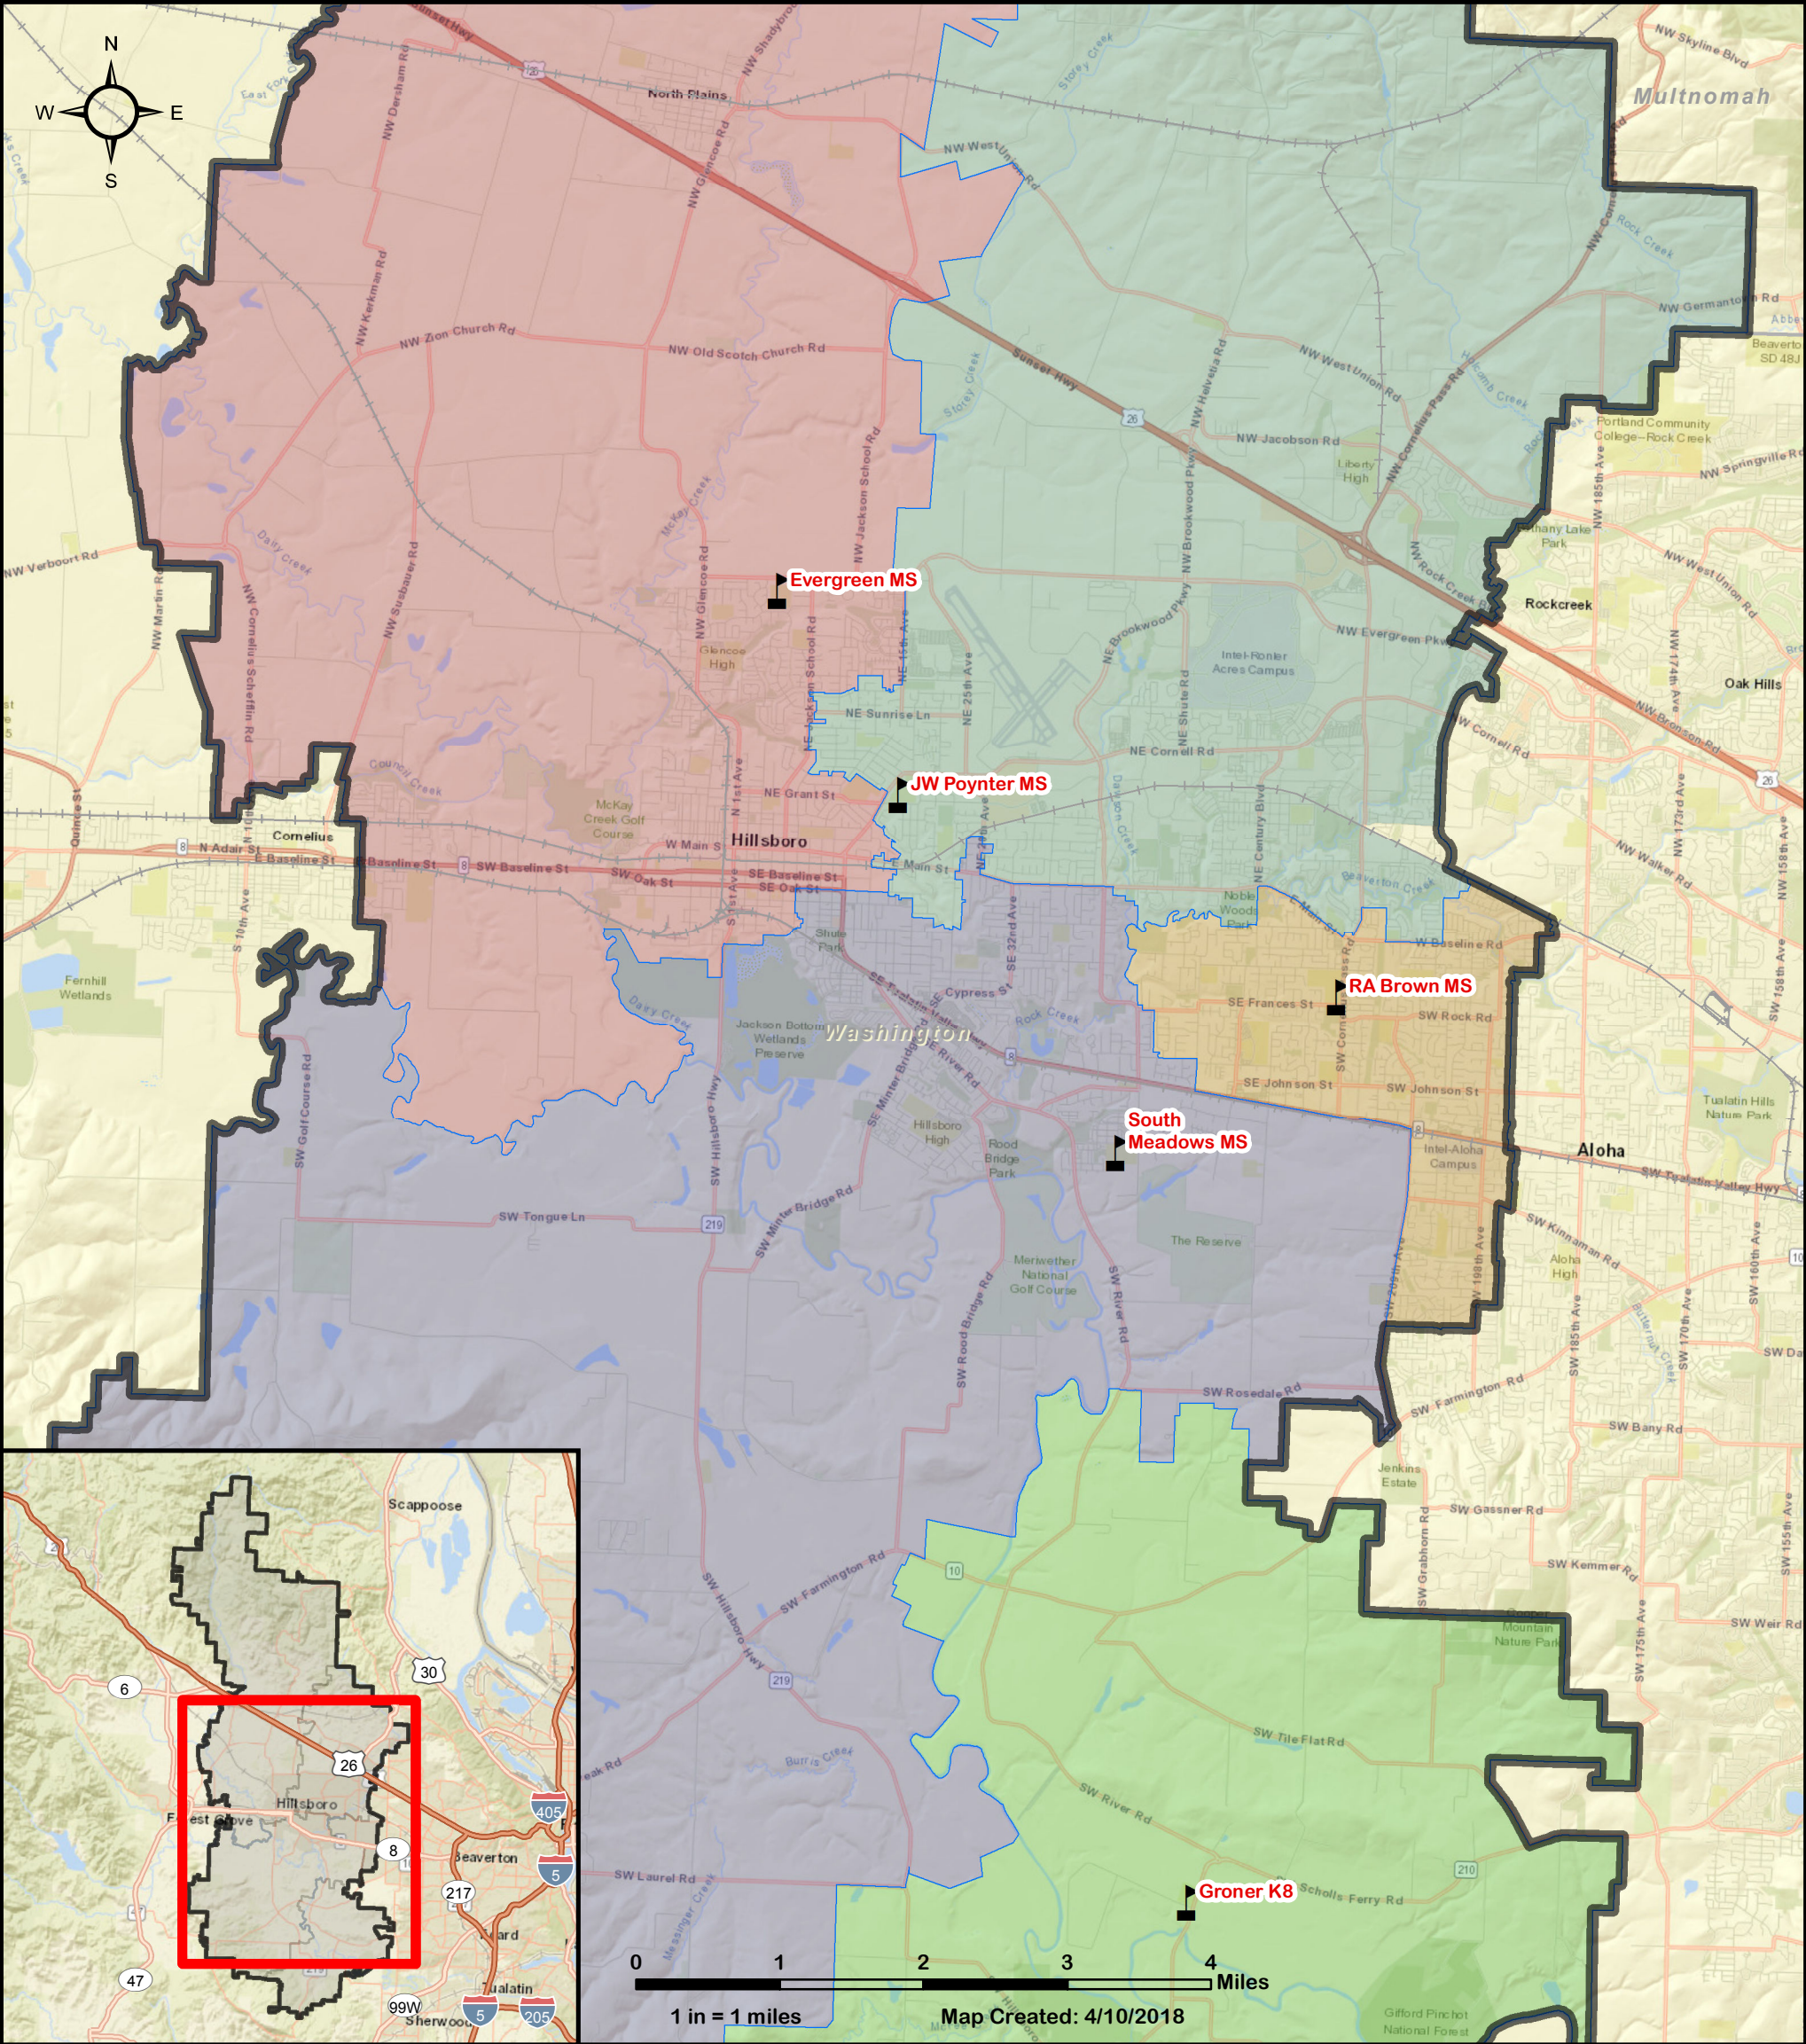

Growth for each of the middle school attendance areas is quite different When considering the amount of development planned for the district. The South Meadows attendance area which is expecting the largest amount of residential development may only grow by about 90 7-8 middle school resident students. The amount of development in the area is offsetting the decline in student population the region is currently experiencing. Six of the seven feeder elementary attendance areas for South Meadows are currently declining in resident student populations. The Rosedale ES attendance area is the only attendance area feeding the South Meadows attendance area projected to see growth throughout the projection timeframe mainly due to residential development scheduled for this area. The Evergreen MS attendance area on the other hand is experiencing a more positive mobility for its elementary attendance areas that feed Evergreen MS. Four out of the five elementary feeders for this attendance area are currently experiencing growth. It would be easy to make the assumption that South Meadows attendance area would grow at a faster pace then Evergreen given the amount of development in the South Meadows attendance area but because of the positive mobility within the Evergreen attendance area, this area may see more resident students projected within the projection timeframe. Without the presence of development we would likely be looking at declines in middle school student population in the South Meadows attendance area.

The JW Poyntner MS attendance area will also see its resident student population increase as it is projected to add 49 students over the next 7 years representing an increase of 8.9%. Unlike the South Meadows and Evergreen attendance areas growth here will not be caused primarily due the presence of planned residential construction. Here the growth is simply a function of the way students are distributed across the grades. The current 6<sup>th</sup> and 7<sup>th</sup> grade classes continue to be the smallest in the grade distribution with the exception of the kindergarten class. This will lead in larger incoming 7<sup>th</sup> grade classes and cause the middle school student population to grow in the coming years. The JW Poyntner attendance area will see its resident student population grow from 730 student in 2017 to about 779 students by 2024.

The RA Brown attendance area as it is expected to see an increase of 68 resident students or 8.9% over the next 7 years. The Groner attendance area, which is serving grade K-8 may remain static by the end of the projection timeframe, fluctuating only slightly in 2018 through 2021. attendance area serving middle school students may see a decline in its resident student population of about 12 in 2018 and then return to about 47 to 46 resident students in years 2020 and 2021 and then declining again in Fall 2022 through fall 2023 then ending at 42 students in Fall 2024. The fluctuation here from year to year may be due in part to the different class sizes entering the middle school grades throughout the projection timeframe.

**DAVIS**  
DEMOGRAPHICS

## High School Attendance Area 7 Year Change

**High School Attendance Area Student Population Projection Trends**

The Hillsboro School District has four comprehensive high schools (Century HS and Glencoe HS, Hillsboro HS, and Liberty HS) that house nearly all of the District's entire 9-12 student population. During the fall 2017 school year there were a total of 1,474 9-12 students housed within the Century HS attendance area, one of the District's four high school facilities with 176 of those 9-12 students living within the Hillsboro HS attendance area as well as Glencoe HS, Liberty HS attendance areas, including 35 attending Century from outside the District. For fall 2017 Glencoe HS had a total enrollment of 1,528 with 107 from open enrollment from the three other attendance areas as well as 43 from outside of the District. Hillsboro HS had a total enrollment of 1,288 which included 108 open enrollment students attending the school from other areas of the district as well as from outside the District. Liberty HS had a total enrollment of 1,509 students with an open enrollment of 219. 109 of the students attending the district came from other attendance areas and 110 of the total 219 students were attending Liberty HS from outside the district. According to the seven-year projections, it appears that the District's 9-12 resident student population should grow by 869 students by the end of the projection timeframe fall 2024. The high schools currently house 6,231 high school aged students within its attendance areas and may grow to 7,100 by Fall 2024.

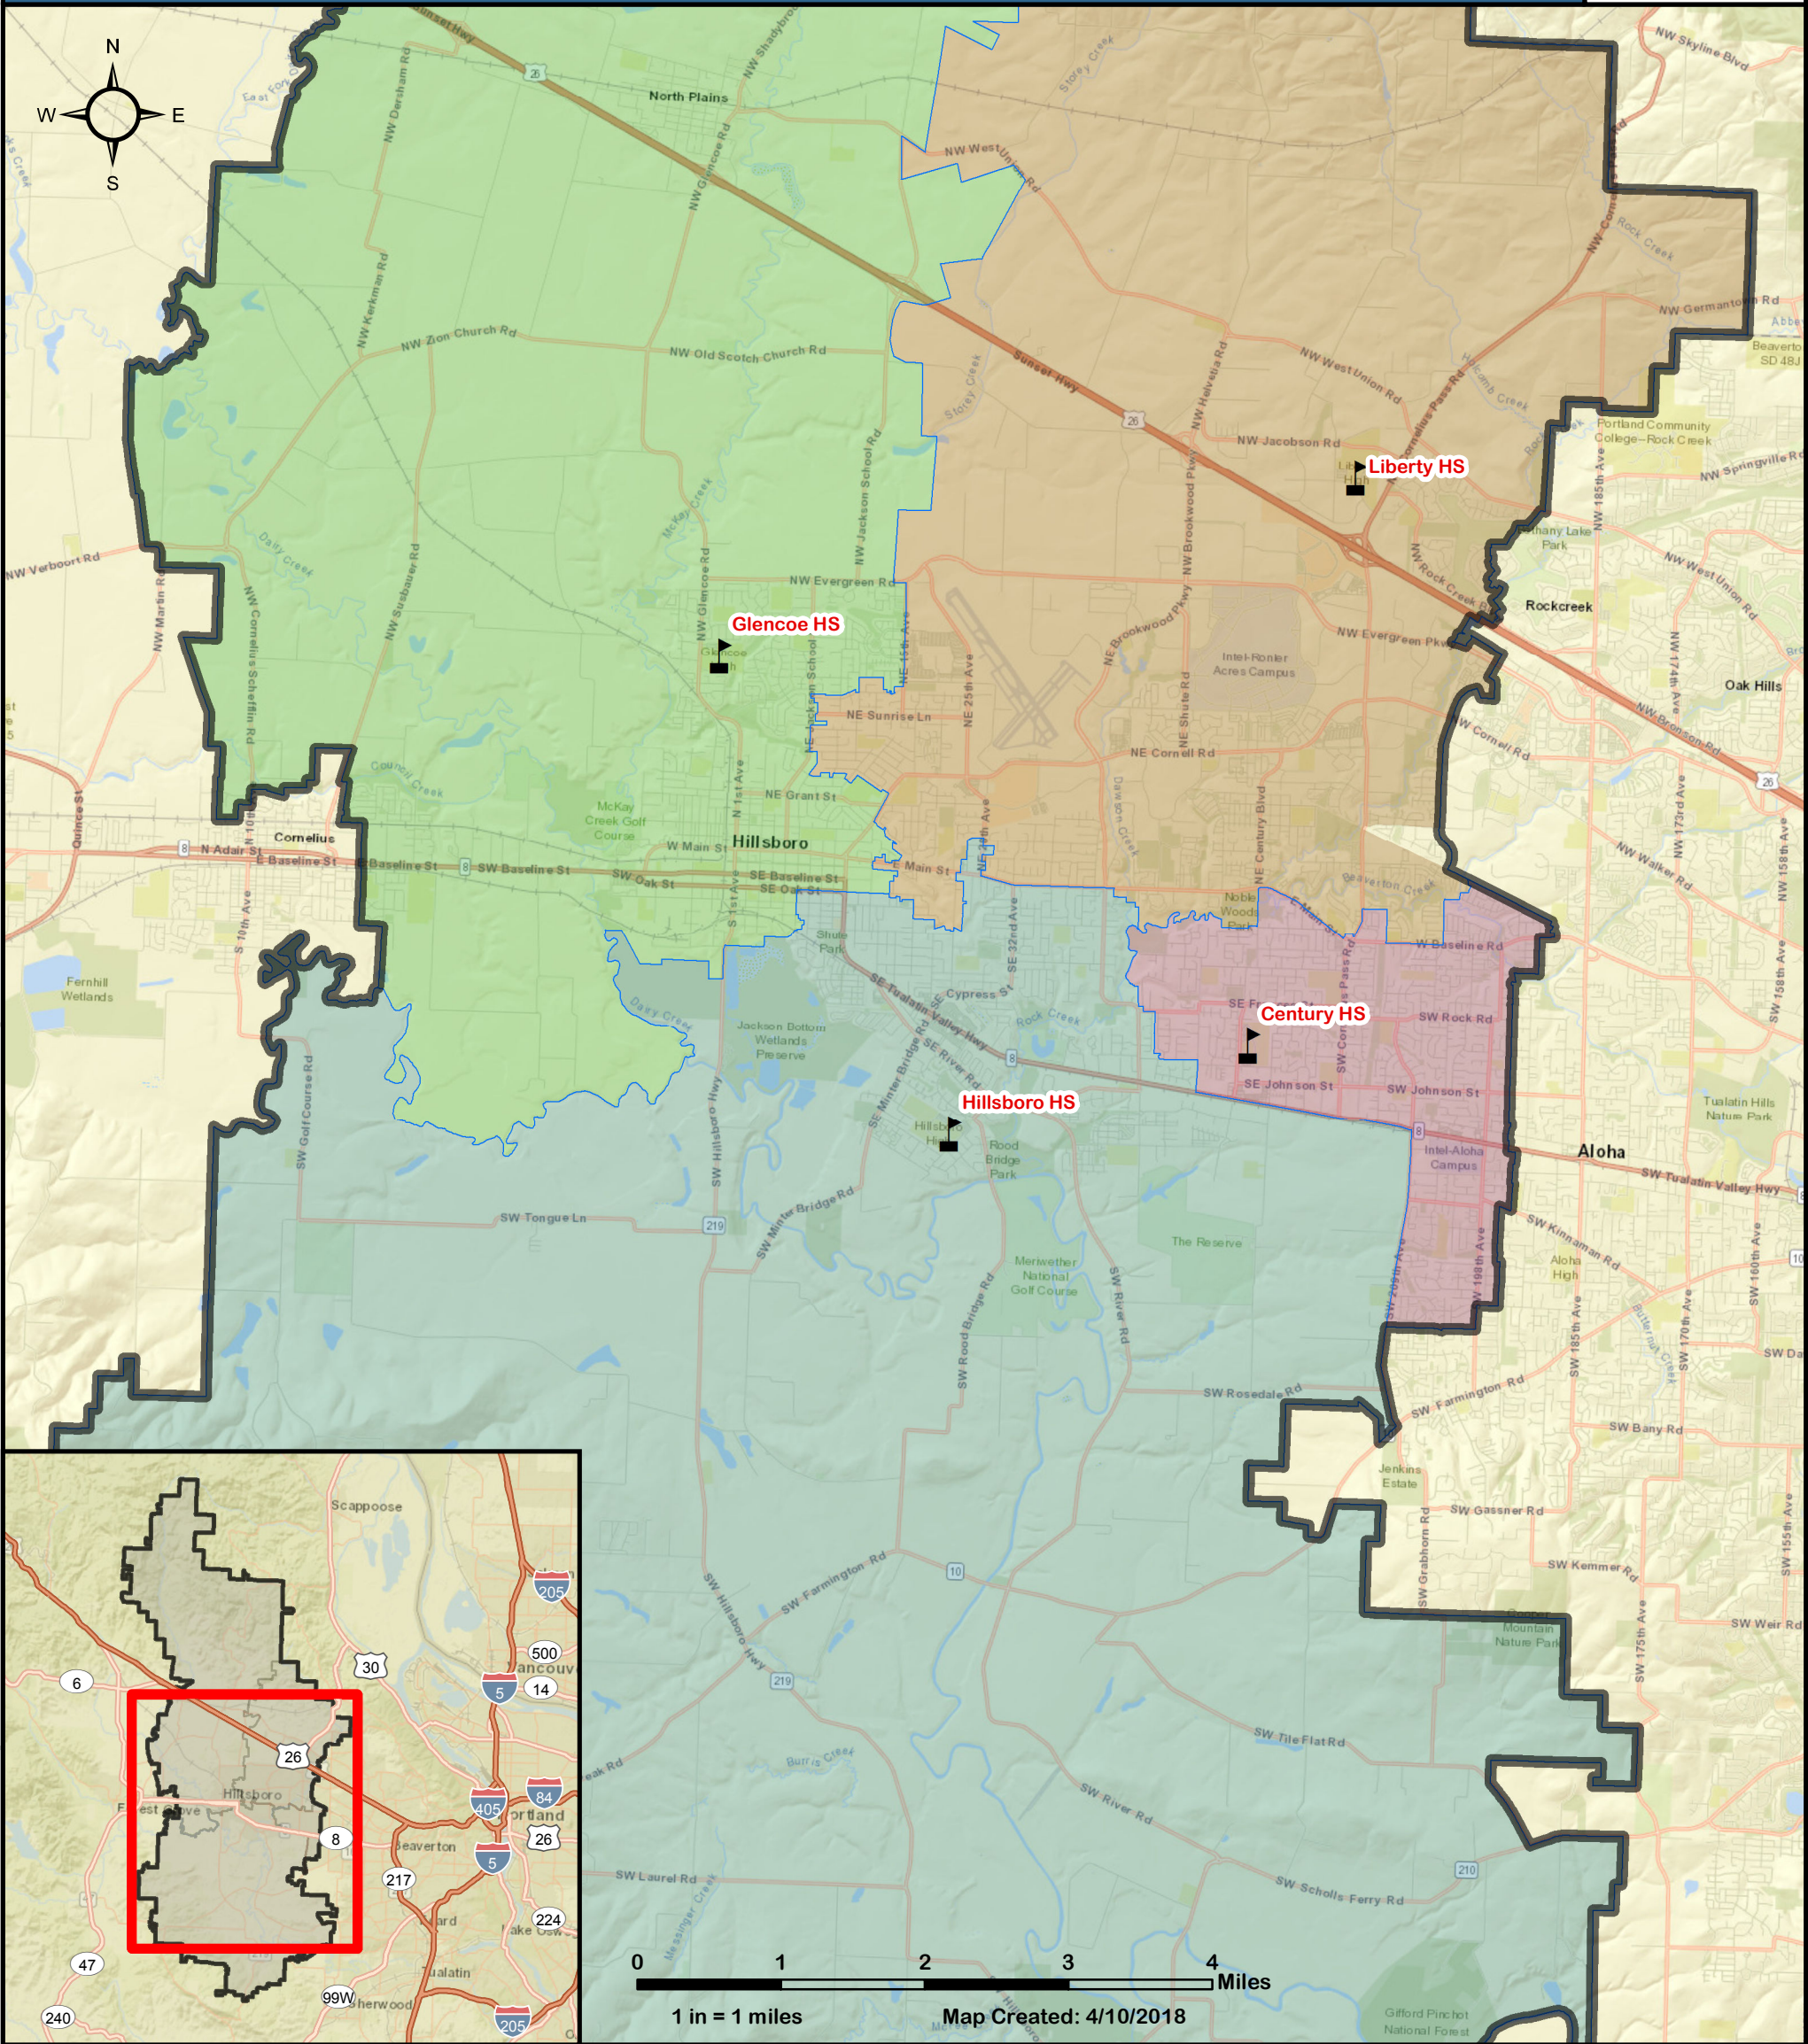

Two of the District High Schools may see their capacities surpassed sometime within the projection timeframe. The largest increase is forecasted to occur within the Hillsboro attendance area. This comes as no surprise as the area is set to be impacted by new homes coming out of the South Hillsboro Community Plan. At the end of the projection timeframe in 2026 the Hillsboro high school attendance area should see its resident student population increase by 294 students or 21% and continue to have sufficient capacity. The Glencoe high school attendance area will also see its resident student population be driven higher by increased development activity in North Plains. Glencoe happens to be the District's smallest high school in terms of capacity and it could become concern here as the current campus has capacity for 1,632 students. Further growth is expected as the resident student population is expected to reach 1,802 students by 2024 amounting to a gain of 190 students over 7 years or 11.8%. With so much excess capacity available at both neighboring Liberty and Hillsboro high school small boundary adjustments could easily solve any potential capacity issues.

The liberty high school attendance area will also see a gain as it is poised to grow by 6.9%. The growth here however will be organic as a bubble that has been forming in recent years and currently extends from kindergarten to 6<sup>th</sup> grade continues to work its way into the high school grades. This will lead to larger incoming freshmen classes that will cause the resident student population to grow from 1,464 students in 2017 to 1,594 students in Fall 2023 and then decline by the end of the projection period in 2024 to 1,565. While Century high school is only expected to see a small increase of just 80 students or 5% over the next 7 years.

With the exception of the Glencoe high school attendance area, capacity will not be an issue as plenty of excess capacity exists in the District's other high schools. The availability of this unused capacity gives the District the option, while never popular with the public, the ability to use boundary changes to solve a potential issue. This has the added benefit of avoiding the costly solutions of adding temporary modular units or permanent class room space.

**SECTION SIX – CONCLUSION AND RECOMMENDATION**

Analysis of the attendance area projections reveals that three of the District's elementary and two high school attendance areas will see their resident student populations exceed their capacities at some point during the next 7 years. While each of the District's Middle are expected to have excess capacity through at least 2024. What solutions are ultimately recommended to address these concerns are influenced by the degree in which the capacity of each campus is exceeded, the ability of surrounding schools to relieve impacted areas and their proximity to impacted campuses.

Capacity may become a concern for Glencoe High School as its resident student population may exceed the capacity of the campus. However the projections indicate that both Liberty and Hillsboro high school attendance areas should have enough excess capacity to accommodate additional students. This makes redistricting a plausible solution the District could pursue to solve any potential capacity issues that may arise as a result of growth within the Glencoe high school attendance area.

The Orenco elementary attendance is expected to see its resident student population grow to exceed the capacity of the facility as soon as next year 2018 when the population may reach 660 (K-6) students in Fall 2018 and then decline slowly to 565 (K-6) students by Fall 2024. Taking into consideration that the current enrollment of the campus is already near capacity the District may want to consider limiting transfers to Orenco to make more seats available to the growing resident student population. An alternative option for consideration would be shrinking the attendance boundary to ensure the campus enrolment stays below capacity.

Another area of the District that will face a challenge concerning capacity will be in the North Plains attendance area. Here we expect to see the resident student population see significant growth in the future due to several resident developments that will be completed over the next decade. While much growth is anticipated, there is significant capacity available on the campus to accommodate additional students. By 2019 the resident student population of North Plains may grow to 499 (K-6) students exceeding the capacity of 448 students. The district may not need to take any dramatic measures to address the capacity concerns here over the next seven years but there is a significant amount of land that could lead to development in the future beyond the scope of the 7 year projections window. In light of this it is recommended that this district and DDP continue to closely monitor the future plans of developers in the area to make sure the District has ample time to react to any resulting student population growth.

The largest challenge for the District over the next 7 years will adding capacity to house students that will be generated by the construction of the South Hillsboro Community Plan. The entirety of the project will impact the Rosedale Elementary, South Meadows Middle and Hillsboro High School attendance areas and is expected to take 20 years to fully complete. However, over the next 7 years only Rosedale elementary will exceed its capacity. This is projected to occur as soon as 2020 when the resident student population is expected to reach 570 students. The situation is only expected to become more problematic as the projections progress and construction of the South Hillsboro Community Plan continues. By 2024 the nearly 850 students (K-6) are expected to claim residence within the Rosedale Elementary attendance area exceeding capacity of the campus by 292 students. Solutions to address a lack of capacity include but are not limited to, changing of attendance boundaries, relocation of special programs to influence enrollment, adding temporary classrooms, the construction of permanent classroom space to existing facilities or the construction of a new school. With so much growth expected to occur and a lack of neighboring facilities with excess capacity in close proximity It is recommended that the Hillsboro School District take measures to add capacity in the form of new Facility within the current Rosedale Elementary attendance areas to address the capacity concerns.

**SECTION SEVEN – SCHOOL PROJECTIONS BY ENROLLMENT****Staffing Projections (Projections by Enrollment)****Two-Year Staffing Projections**

Mid-term to long-term facilities planning is always best when it is based upon the resident location of future student populations, rather than the enrollment at the individual schools. However, a two year projected enrollment can be used to assist with estimating staffing and budget requirements over the short term.

**Methodology for Schools with Attendance Boundaries**

Calculating a staffing projection for schools with attendance boundaries is different from calculating it for a school without attendance boundaries. For school with attendance boundaries, the two year projected enrollment is calculated using a combination of future resident population and historic transfer patterns for each school.

Similar to the mobility factors in the residence projections, a cohort is derived by averaging four years of past transfer patterns. The cohort is calculated for both transfers into and out of each school for each grade between 1 and 12 that the school serves. This cohort is then applied to the current transfer by grade of the base year students to come up with estimated in and estimated out transfers for the future years. To estimate the transfers in and transfers out for the lowest grade served at each school, an average is taken of the last four years of transfers. Finally, projected enrollment by grade for each school is calculated by taking the projected resident population, and adding the estimated transfers in and transfers out.

**Methodology for Schools without Attendance Boundaries**

To calculate a staffing projection for schools without attendance boundaries, a different method of calculation is used. Transfers in and transfers out for the lowest grade served at each school are estimated by taking an average of the last four years of transfers. Each subsequent grade is calculated using the non-weighted cohort survival method and applied to the current year's enrollment.

Here is a school's staffing projection report. The numbers were calculated using sample data.

**A and B - Projected Residence - Projected residence by grade for each school:**

Projected residence is taken from a 5, 7, or 10 year projection which is calculated using the SchoolSite Projections tool.

**C - Estimated Transfers In:**

Estimated transfers in is based on a cohort derived from four years of historical transfer data.

**D - Estimated Transfers Out:**

Estimated transfers out is based on a cohort derived from four years of historical transfer data.

**E - Actual Enrollment - Actual enrollment by grade for each school:**

Enrollment by grade can be derived by selecting all students attending each school and summarizing by grade.

**F - SchYr Projected Enrollment - Projected enrollment by grade for each school for the first year of projection:**

Calculated using projected residence by grade and adding the transfers in and transfers out.  $F=A+D+E$

**G - SchYr Projected Enrollment - Projected enrollment by grade for each school for the second year of projection:**

Calculated by using projected residence by grade and adding the transfers in and transfers out.  $G=B+D+E$
