

Career and Technical Education Opportunities

In accordance with the Children with Disabilities Article of Illinois School Code (105 ILCS 5/14-8.03), Sycamore School District provides the following resources concerning Career & Technical Education (CTE) Pathways, Dual Credit offerings, and post-secondary CTE pathways. Please feel free to contact your student's case manager or counselor with questions or for additional information regarding any of these programs. Our goal is to provide transparent communication and equitable access to these programs for all of our students.

Sycamore High School offers several CTE courses and pathways both on our campus and through partnership with other area high schools via the Kishwaukee Education Consortium (KEC). Those interested in learning more about these offerings can find the most up-to-date information by visiting the links included below.

For more information regarding CTE courses offered on SHS's campus, [please visit our online course catalog](#). Courses here can be filtered by department, and CTE courses can be found by filtering by [Business & Technology](#) or [Agriculture](#). Depending on your interest, there are also digital art courses, TV production courses, and other offerings that may not be as closely aligned with the CTE acronym but may be of interest to your student. Again, the best way to identify current courses would be to visit the [online course catalog](#) and use the various filtering and search features available.

In addition to the courses offered on the SHS campus, a variety of additional courses and pathways are available via our partnership with KEC. To learn more about KEC courses you can again visit the [online course catalog and filter by KEC](#), or you can [click this link](#) to directly view their most current course catalog.

In addition to the CTE offerings available at SHS and through KEC, we are also excited to be able to offer several dual credit courses through a partnership with Kishwaukee College. More information regarding this programming, application procedures, course fees, etc. can be found by visiting the dual credit portion of the SHS website which can be [found at this link](#).

Finally, many of our students continue their studies in the CTE fields locally at either Kishwaukee College or Northern Illinois University. Those interested in pursuing their studies at either institution can learn more by reaching out to their admissions departments. Kishwaukee College's admissions department [can be found at this link](#), while Northern Illinois University's admissions office [can be found here](#).

As always, we aim to empower our students to be successful in whatever path they choose both while they are students in our district and after their graduation. While the information in this document is a helpful planning resource, please do not hesitate to reach out to us with specific questions.
