**INTRODUCTION AND DISTRICT BACKGROUND**

The Pasadena School District has contracted with Davis Demographics & Planning, Inc. (DDP) to update and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes: mapping the District, geocoding a student file that is usually representative of October's official head count, developing and researching pertinent demographic data, identifying future residential development plans, if any, and developing a seven year student population forecast. DDP will then assist the District in developing solutions for housing future student population. This study was prepared to assist the District's efforts in evaluating future site requirements and attendance area changes.

The purpose of this report is to identify and inform the District of the trends occurring in the community; how these trends may affect future student population; and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts. The District can then use this information to better plan for the need, location and timing of facility or boundary adjustments.

The **Sources of Data** section details where the two sources of data, geographic and non-geographic, are collected and how each data item is used in the seven year student population forecast model.

The **Seven Year Forecast Methodology** section discusses, in detail, how the factors used in the study were calculated and why they were used. These factors include: the calculation of incoming kindergarten classes, additional students from new housing (referred to as student yield), the effects of student mobility, and a detailed review of planned residential development within the District.

The **Student Resident Forecast Summary** sections are a review of school year 2018/19's student resident forecast results. Included in these sections are a district wide student population forecast summary and a projected resident student population summary for each existing attendance area and study area.

While reading this report, it is important to remember that this is a snapshot of current and potential student population based upon data gathered in fall 2018. Population demographics change, development plans change, funding opportunities can change, District priorities can change, and therefore, new forecasts and adjustments to the overall Facilities Master Plan will continue to be necessary in the future.

**EXECUTIVE SUMMARY**

Davis Demographics & Planning, Inc. (DDP) collected relevant demographic data to calculate factors in the Student Population Forecast. Area births and historic PUSD student population was used to help estimate future kindergarten enrollment (births) and student migration patterns (historic students). Area births have been declining steadily for over two decades. This continued decline will most likely lead to smaller TK and Kindergarten enrollment in the future. Furthermore, PUSD is experiencing an out migration of students throughout the entire district. When analyzing four years of data more PUSD students are leaving a PUSD school than new students enrolling into one. These students are exiting a PUSD school to enroll in private schools, charter schools or neighboring districts.

After reviewing the factors, calculating and analyzing the seven years Student Population Forecast, PUSD can expect continued decline in the near future. Reduced area births and net out migration of students will continue to lower PUSD enrollment potentially by 11% over the forecast timeframe. Currently four elementary attendance areas have less than 400 TK-5 resident students. At this point there is little to suggest this trend is going to turn around soon. Any new residential development in the district is geared toward active seniors or couples without children. Furthermore, the overall population of the area is ageing in place and not being replaced by families with children. DDP and PUSD staff conducted various analyses of things that may be affecting enrollment at PUSD.

DDP compared the estimated school age population of the District (census block data) to the number of PUSD students residing within the district boundaries. PUSD is capturing only roughly 51% of the school age population residing within the PUSD boundaries. This is by far the lowest capture rate of school districts within the San Gabriel Valley. Further analysis, down to the elementary attendance area level, reveal that some attendance areas are capturing lower than 50% with the Don Benito's attendance area at a 30% capture rate.

A likely factor contributing to low capture rates is the abundance of educational opportunities in the area. There are over 50 private and charter schools of various enrollment within the PUSD boundaries. Areas with high concentration of educational opportunities appear to have lower capture rates than other areas in the district. Furthermore, students are choosing to attend neighboring districts schools.

The Pasadena Unified School District is in a period of transition and adjustments. Within the past few year there have been attendance area adjustments, transition of schools from attendance area to district wide and vice versa and an introduction of new programs. Inter-district transfer have increased by an average of approximately 56 students per year since the 2011/12 school year and the district is implementing measures to increase enrollment.

It is difficult to forecast enrollment during a period of adjustment. Enrollment trends usually take three to four years to become discernable and predictable. DDP and district staff will continue to monitor area births, student migration patterns, student capture rates and other variables to spot trends as they begin

---

## **SECTION ONE – METHODOLOGY**

### **SOURCES OF DATA**

#### **Geographic Map Data**

Four (4) geographic data layers were updated for use in the seven year student population forecasts:

1. Street Centerline Database
2. Study Areas
3. Schools
4. Students – Historical and Current

#### **1) Street Centerline Data**

The street database has associated attributes that contains, but are not limited to, the following fields: full street name, address range and street classification

The main function of the streets is in the geocoding process of the student data. Each student is geocoded to the streets by their given residence address. The geocoding process places a point on the map for every student in the exact location that student resides. This enables DDP to analyze the student data in a geographic manner.

Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets and neighborhood streets are generally used as boundaries for the study areas.

#### **2) Study Areas**

Study areas are small geographic areas, similar to neighborhoods, and the building blocks of a school district. Study areas are geographically defined following logical boundaries of the neighborhood such as freeways, streets, railroad tracks, or rivers. Each study area is then coded with the elementary, middle and high school that the area is assigned to attend. By gathering information about the district at the study area level, DDP and the District can closely monitor growth and demographic trends in particular regions and identify potential need for boundary adjustments or new facilities.

#### **3) Schools**

The District provided school facility location information to DDP for the purpose of mapping the District facilities. The school information includes school name, address, unique code and capacity.

#### **4) Student Data**

**a. Historical Student Data** - Historical enrollment is used to compare past student population growth and trends as well as the effects of mobility (move in, move out from existing housing) throughout the District. DDP utilized the three (3) previous years (2015/16, 2016/17 and 2017/18) geocoded students as historical data.

**b. Current Student Data** - A student data file for October XX, 2018 (received by computer data file from the School District) summarized by grade level and by study area is used as a base for student population forecasts. Existing students were categorized by study area through the geocoding process that locates each student within a particular area based upon their given address. The forecasts run each of the next seven years from school year 2018/19 through school year 2025/26.

**c. Student Accounting** The Student Accounting Summary (Table 1) indicates the total student enrollment as of October XX, 2018 and the number of student used in the seven year student population forecasts. The forecast model is based upon student residence and excludes students residing outside

of the District's boundaries, students unable to be address matched and special education students (special education students usually attend a school that services their particular need).

<b>Student Accounting Summary</b>	
<b>School Year 2018/19 Actual Enrollment (10/04/18)</b>	
<b>Total Students Provided by District</b>	<b>17,130</b>
Students Residing out of District (includes 7 TK students)	-757
Special Education Students (Type SDC, includes 51 Focus Point Students)	-616
Independent Study Students (205 CIS, 25 RCHS)	-230
Unmatched Students	-17
Pre-Kindergarten Students (GR = PS or Burbank Special Ed PK)	-823
PALS Students (school = PALS)	-36
Non-Public Schools (school = NPS)	-93
Other Students (Home/Hospital)	-15
<b>Students used in Residential Forecast</b>	<b>14,543</b>
Students Residing out of District (includes 7 TK students)	757
Special Education Students (Type SDC, includes 51 Focus Point Students)	616
Independent Study Students (205 CIS, 25 RCHS)	230
Unmatched Students	17
<b>P.U.S.D. 2018/19 TK-12 Enrollment</b>	<b>16,163</b>

Table 1– Student Accounting Summary

**Data Used for Variables**

Two sets of data were compiled and reviewed for use in the seven year student population forecasts by residence:

1. Births by Zip Code
2. Mobility Factors

**1) Births by Zip Code Data**

Birth data by postal zip code was obtained from the California State Department of Health for the years 1996-2016 and roughly correlated to the Pasadena Unified School District. Past changes in historical birthrates are used to estimate future incoming kindergarten student population from existing housing.

**2) Mobility Factors**

Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, which is essentially a modified cohort, is applied as a percentage of increase/decrease among each grade for every year of the forecasts.

## SEVEN YEAR PROJECTION METHODOLOGY

The forecast methodology used in this study combines historical student population counts, past and present demographic characteristics, and planned residential development to forecast future student population at the study area level. District-wide forecasts are summarized from the individual study area forecasts. **These forecasts are based on where the students reside and where they should be attending school. We use the actual location of where the students reside, as opposed to their school of enrollment, in order to provide the most accurate estimate of where future school facilities should be located.** The best way to plan for future student population shifts is to know where the next group of students will be residing. The following details the methodology used in preparing the student population forecasts by residence.

### **Seven Year Forecast**

Forecast are calculated out seven years from the date of the current year for several reasons. The planning horizon for any type of facility is typically no less than five years, often longer. Seven years are usually sufficient to adequately plan for facility adjustments. It is a short to mid-term solution for planning needs. Forecasts beyond seven years are based on speculation due to the lack of reliable information on birthrates, new home construction and economic conditions.

### **Why forecast are Calculated by Residence?**

Typically, school district forecasts are based on enrollment by school. However, this method is inadequate when used to locate future school facility needs, because the location of the students is not taken into consideration. A school's enrollment can fluctuate due to variables in the curriculum, program changes, school administration and open enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

The method used by DDP is unique because it modifies a standard cohort forecast with demographic factors and actual student location. **DDP bases its forecasts on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside.**

The best way to plan for facility requirements is to know where the next group of students will be residing. The following details the methodology used in preparing the student population forecasts.

**PROJECTION VARIABLES**

Each year of the forecasts, 12<sup>th</sup> grade students' graduate and continuing students progress through to the next grade level. This normal progression of students is modified by the following factors:

**1) Incoming Kindergarten**

Live birth data is reported to the California State Department of Health by the resident postal zip code of the mother. DDP uses the birth data by zip code roughly correlating to the District boundary and applies the data accordingly. If need be a different birth factor can be applied to various areas of the District.

Incoming kindergarten classes, for existing homes, are estimated by comparing changes in past births in the area. Table 2 illustrates the total births for each zip code in the Pasadena Unified School District from 1996 to 2016. DDP assumes the current kindergarten class (2018/19) was born in five years ago (2013). Future incoming kindergarten classes are estimated by comparing the number births in 2013 to the number of births in 2014 – 2017. DDP compared the total births in 2013 to the total births in 2014, to determine a factor for next year's kindergarten class (2019/20). The 2013 births were compared to 2015 (2020/21's K class), 2013 to 2016 (2021/22's K class) and 2013 to 2017 (2022/23's K class).

Year of Projection	Zip Code		Used In Projection	Year of Projection	Zip Code		Used In Projection	Year of Projection	Zip Code		Used In Projection	Year of Projection	Zip Code		Used In Projection	Year of Projection			
	91001	Change			91024	Change			91101	Change			91103	Change			91104	Change	91105

4. Kindergarten includes Special Education students

Chart 1 and Table 3 – Births vs. K Class

2) Student Mobility Factors

Student mobility factors further refine the seven year student population forecasts. Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage of increase/decrease to each grade for every year of the forecasts. A net student loss is represented by a factor less than 1.000 and a net gain or no change by a factor greater than 1.000 (see Table 4).

Having historical student data categorized by Study area is extremely helpful in calculating accurate Student Mobility Factors. DDP was able to utilize the last four year’s (school years 2015/16, 2016/17, 2017/18, and 2018/19) student data. The 2015/16 student data was compared to 2016/17, 2016/17 to 2017/18, and 2017/18 to this year’s student data at the Study area level. Grades 1-12 Mobility were all calculated to correspond with the elementary school attendance areas.

Example:

$$\begin{aligned}
 & 92 \text{ Altadena kindergarten students in fall 18/19} \\
 & \times \text{ 101\% (Altadena 1st grade mobility)} \\
 & = \text{ 92.9 1st grade students in fall 19/20}
 \end{aligned}$$

Attendance Area Altadena ES		Projection Date 10/4/2018				
	ACTUAL	PROJECTED RESIDENT STUDENTS				
	2018	2019	2020	2021	2022	2023
K	92	99.8	90.9	90.1	82.7	92.0

\* Excludes Out of District, SDC and CIS students

This analysis is not the average Mobility for each year. These numbers are the overall mobility for each grade regardless of where the students reside. Each grade mobility is based upon the previous three (3) years of student data.

**APPLYING THE VARIABLES TO GENERATE THE FORECAST**

The following paragraphs summarize how DDP uses the factors to determine the student population forecasts. Remember that these forecasts are based on residence.

Pasadena Unified School District has been divided into 1,025 study areas. Every study area is coded with the school code of the elementary, middle and high schools attendance area it falls within. The residential forecasts are calculated at the study area level. This means that DDP conducts 1,025 individual forecasts that are based upon the number of students residing in each study area.

The first step in calculating the forecasts is to tally the number of students that live in each study area by each grade (Kindergarten through 12<sup>th</sup> grade). The current student base (school year 2018/19) is then passed onto the next year's grade (2018/19's K become 2019/20's 1<sup>st</sup> graders, 2018/19's 1<sup>st</sup> graders become 2019/20's 2<sup>nd</sup> graders, and so on). After the natural progression of students through the grades is applied, then Birth Factors are multiplied to the current kindergarten class to generate a base for the following year's kindergarten class.

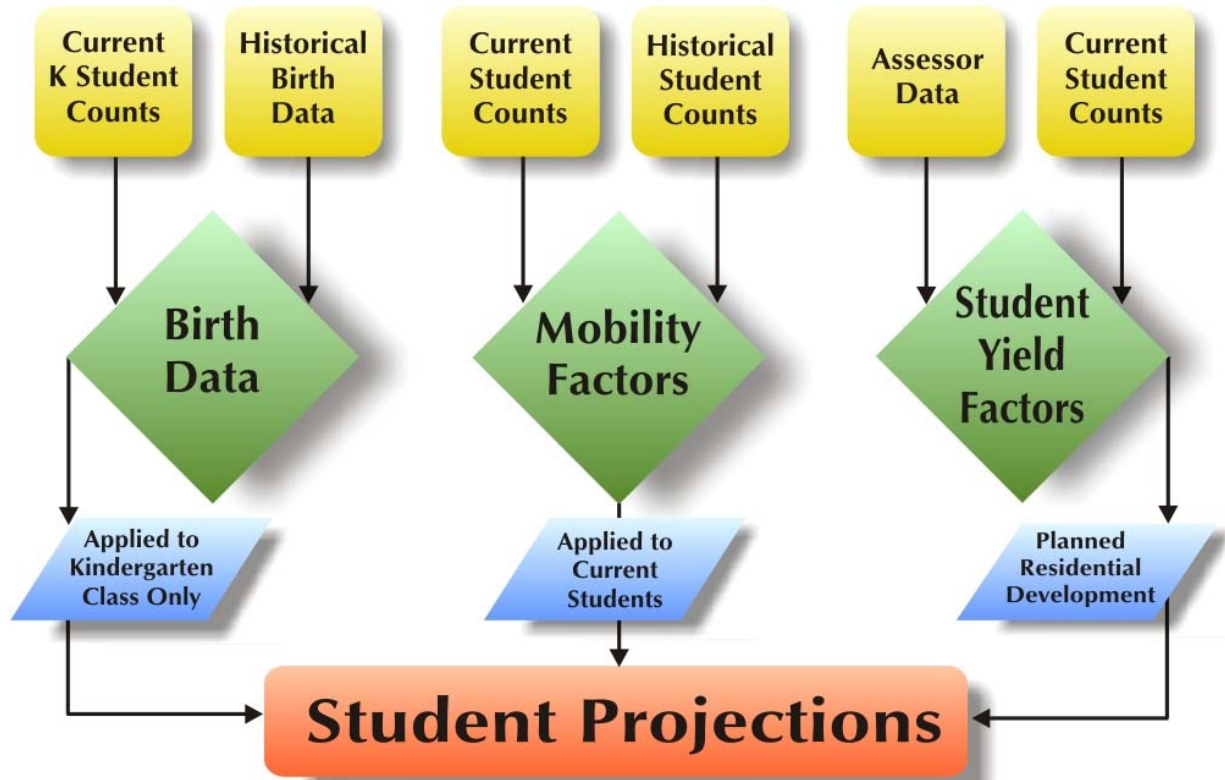

Next, a Mobility Factor is applied to all grades. Again, these factors take into account the natural in/out migration of students throughout the District. The mobility factor is applied to each student in every grade (K-12). A unique mobility factor is applied to each elementary school attendance area determined by the mobility factor study.

To finish generating the forecasts by residence, the same process is conducted for each of the 1,025 study areas. Once the forecasts have been run at the study area level, then it is simple addition to determine forecasts for each of the District's attendance areas or for a district-wide summary. For example, the residential forecasts for the Pasadena High School attendance area is simply the summary of all of the study areas that make up this specific attendance area (see section Four for the forecasts of each elementary, middle and high school attendance areas).

The District Summary for the forecasts (section Three) is a total summary of all 1,025 study areas. The forecasts excludes all of the students that attend a District school but live completely outside of the District's boundaries, students unable to be geocoded, special education students and independent study students. These students are factored back into the forecasts by calculating their current overall percentage of student population, applying the percentage to future years and adding it to the resident forecasts (please see the Attendance Matrices in section Two for a breakdown of the out-of-district, special education and unmatched students by school). DDP adds the current total out-of-district and unmatched students to each year of the forecasts because there is no way to accurately forecast these students in the future.

Current and historical students, geographic data and non-geographic data are used to calculate the factors used in the student population forecasts by residence. These factors are applied using SchoolSite and forecasts are calculated for each study area for each grade.

Forecast by Residence Flowchart

---

## **SECTION TWO – ATTENDANCE MATRICES**

Three Attendance Matrices have been included to provide a better understanding of where students reside and where they attend school. **Remember, DDP projections are based upon where the students reside, not the student's school of enrollment. This method allows DDP to provide the most accurate forecast of where shifts in student population may occur and where changes to future facilities (if necessary) should be located.** Therefore, since the projections are based upon where the students reside, the figures we use as a base for each school's resident projection may be slightly higher or lower than the actual reported enrollment for each school. The best way to plan for future facilities is to know where the next group of students will be coming from, not necessarily which school they are currently attending

Attendance matrices act as a check and balance for student accounting and illustrates where the students reside (in what School of Residence) based upon their geocoded address and which school they attend (School of Attendance) based upon District provided student data. It is essential to show how the students used in the projections match up to the District's records of enrollment for each school. Furthermore, intra-district transferring patterns can be determined by comparing School of Residence data to the School of Attendance data.

### **READING THE MATRIX**

Starting with the K-5 Elementary School Attendance Matrix, let's begin with Altadena as an example. Following down the first column with the Altadena heading, there are 152 K-5 grade students attending Altadena and reside in the Altadena attendance area. Continuing downward, 2 students attend Altadena that resides in the Cleveland attendance area. Next it shows that 0 students attend Altadena and reside in the Don Benito attendance area, and so on.

The row "Out of District" refers to students living completely outside of the Pasadena Unified School District boundary, but attending the District's schools. There are 10 Out of District students attending Altadena. Special Education refers to special education students attending the District's schools. There are 5 Special Education students attending Altadena. The "Total Attendance" is the total number of students attending a school regardless of where they reside, and reflects the District's enrollment counts for each school. There are 227 students attending Altadena.

The next step is to read across the matrix, beginning with the Altadena attendance area row. We know 152 represents the total number of K-5 grade students residing and attending Altadena. The next column, Cleveland refers to the number of K-5 grade students residing in the Altadena attendance area, but attending Cleveland. There is 1 students residing in the Altadena attendance area but attending Cleveland.

The "Residing Totals" column to the far right of the matrix is the total number of students living in that particular attendance area. There are 523 K-5 students residing in the Altadena attendance area.

***SECTION THREE – DISTRICT WIDE STUDENT POPULATION PROJECTION***

The student population is projected out seven years for each of the study areas, attendance areas and for the entire Pasadena Unified School District. The District Wide Summary enables the District to see a broad overview of future population shifts and what impact these shifts may have on existing and future facilities. Each attendance area is summarized to give a more local view of population changes and identify variances in the district. The study area listings enable the District to monitor student population growth or decline in neighborhood areas within the District.

Together, these forecast summaries; present the means for identifying the timing of future population shifts and overall facility adjustments needed to accommodate these shifts. At any time, study areas and their projected resident students can be shifted between schools to assist in balancing enrollment, school consolidation among various other analyses.

DISTRICT-WIDE SUMMARY

**APPENDIX B – STUDENT CAPTURE RATE ANALYSIS**

Estimated student capture rates are used to give the district a rough estimate of the school age population of each attendance area compared to the number of PUSD students residing there. School age population is derived from overlaying PUSD attendance areas onto ESRI's estimated population by census block data. The data was compiled by TK-12 and by TK-5, 6-8 and 9-12 grade ranges.

PUSD is capturing approximately 51% of the school age population residing within the district's boundaries. This is the lowest capture rate of the school districts within the San Gabriel Valley.
