About Project MOST

Project MOST provides real-life work experience and training to help young adults with different abilities to make successful transitions from school to productive adult life. Students are enrolled in a nine-month program that provides training and career exploration, innovation adaptations, long term job coaching, and continuous feedback from teachers, and LMV/Magna employees.

“This program is not a normal concept for an automotive facility and at first we were worried about its success as well as the acceptance of our current workforce. Those concerns were quickly wiped away because they were widely accepted by all of our employees and they continue to succeed on a daily basis. Once we started the program, we quickly realized that it is about the people and developing the whole person.”

Bob Clemens (HR Manager, LMV)

“I have learned new skills through new opportunities that you can never get in a high school”

Elizabeth Sears (LHS Student)

Project MOST Vision Statement

Project MOST’s vision is to create knowledge, understanding and balance within the workforce. This will be accomplished through collaboration with all levels of educators and skills.

Project MOST was created by leaders within manufacturing and educators to address the challenge of hiring qualified employees.

• OSHA 10, CPR & First Aid, Drivers Permit & more
• 3.5 credits Practical Arts as needed
• Follow Liberty School District calendar

LMV Automotive Systems

Year Built:
2012 - 468,000 Sq ft facility

What We Do:
We build underbody assemblies for Ford, GM & Cadillac.

How We Do That:
By utilizing the latest technology in spot welding, projection welding, & MIG welding.

“It has helped me with my confidence. It has helped me learn new skills and helped me open up to the people I work around.”

Tyler Robinson
(LHS Student)

“The program has helped me open up to other people and learn hands-on skills. It has also helped prepare me to become a better adult.”

Kevin Hacker
(LHS Student)
