Mr. Steven Lella Business Administrator Essex Fells Board of Education 102 Hawthorne Road Essex Fells, New Jersey 07021

Re: Lead in Drinking Water Services per NJAC 6A:26
Essex Fells Elementary School: 102 Hawthorne Road Essex Fells NJ

Dear Mr. Lella,

New Wave is pleased to submit this lead in drinking water report for the Essex Fells Board of Education. This report details the methods and findings of the comprehensive lead in drinking water services as per New Jersey state regulations (amendments to N.J.A.C 6A:26 Educational Facilities) performed at the various schools in the Essex Fells School District, located at the above referenced addresses on October 30, 2021.

Best Regards,

Nadine Bello

APPENDIX A Chain of Custody and Lab Results

Executive Summary of Lead in Drinking Water Services November 2021

New Wave Engineering was retained to conduct a first draw "lead in drinking water sampling" at the district's school buildings located within the Essex Fells Board of Education in October of 2021. Water samples were collected from designated drinking water outlets at the following schools:

All samples were collected according to the regulatory guidelines outlined in the amendments to the N.J.A.C. 6A:26: Educational Facilities (October 2016) and its supporting documentation.

Essex Fells Elementary School

First draw sample results indicated that water sources sampled at locations from the above noted schools, exhibited <u>no lead levels</u> above the Regulatory Action Level of 15ppb. All potable drinking water sources tested can continue to resume regular usage. The next required testing of drinking water sources in NJ schools will need to be completed in three (3) years unless any plumbing changes are made to the water system.

1.0 PROJECT BACKGROUND

New Wave Engineering was contacted by the Essex Fells Board of Education (the "Client") to perform lead in drinking water sampling to determine the lead content of drinking water from sources throughout the school facilities. Additionally, as per State regulations, New Wave was contracted to update a Quality Assurance Project Plan (QAPP) and a Sampling Plan (SP), including: a Drinking Water Outlet Inventory, Filter Inventory, and Outlet Location Schematic in conjunction with the District's Buildings and Grounds Director.

The purpose of lead in drinking water sampling is to determine if any sampled drinking water sources exhibit lead levels exceeding the Regulatory Action Level of 15 parts per billion (ppb). Drinking water concentration points included: any water sources from which a student, staff, or faculty may reasonably drink or from which the water may be used for cooking or beverage preparation, including, but not limited to, water coolers/bubblers, kitchen faucets, Nurse's Office faucets, and Faculty/Staff lounges.

For further information on guidance protocols and Action Levels that were followed please refer to: The EPA's Revised Technical Guidance - "3Ts for Reduced Lead in Drinking Water in Schools" and the Guidance Document from NJDEP Division of Water Supply and Geoscience — "Lead in Drinking Water: Guidance for Schools and Child Care Facilities Served by Public Water".

2.0 LEAD IN DRINKING WATER

Lead is a toxic substance that can be harmful to human health. As compared to adults, children are more susceptible to the detrimental health effects of lead, as their nervous systems are not yet fully developed. Exposure to lead can occur in a variety of ways including through food, soil, deteriorating lead-based paint, and drinking water. Lead can leach into drinking water from plumbing materials such as pipes and solder, as well as brass plumbing fixtures. For this investigation, planning, preparation, methodology, sampling, and follow up actions were conducted according to the technical guidance provided by New Jersey following the adoption of amendments to N.J.A.C. 6A:26: "Educational Facilities, requiring the sampling of drinking water for Lead in Schools"

3.0 DRINKING WATER SAMPLING METHODOLOGY

New Wave collected drinking water samples from water outlets throughout each school building. At each collection point, New Wave filled a 250 milliliter (ml) wide-mouth high density polyethylene (HDPE) sample collection bottle from the designated water source. Samples were collected after the water in each building had not been used for at least 8 hours, but not more than 48 hours. The initial sample at each collection point represents the first draw sample. The first draw sample is representative of the water from the end point of the water source (i.e., the bubbler/bottle filler or tap).

A field blank using lead-free laboratory reagent water was also collected for each Facility during the sampling event to rule out contamination of samples during the collection and transportation process. All samples were recorded utilizing proper chain of custody

documents and couriered to *Garden State Laboratory*, a New Jersey certified laboratory (*NJ Lab ID #20044*) located in Hillside, New Jersey for analysis via EPA method 200.80

During the initial sampling event on October 15,2021, New Wave collected the following number of samples at the School Building:

Essex Fells Elementary School

1) 1 Field Blank

2) 5 first draw samples

Receipt of the first draw sampling results indicates that no location produced a level greater than 15 ppb. Since no location exceeded the action level, no further action is required.

For a complete drinking water outlet inventory and sampling location diagram for each facility, refer to the Sampling Plan, dated May 2017. Updates to this documentation can be found in the Field Log Book for each facility.

4.0 DRINKING WATER ANALYSIS RESULTS

The analytical "lead in drinking water results" for each first draw sample is listed in Tables below:

Table 1: Analytical Lead Results for First Draw Water Samples Collected from Essex Fells Elementary- October 15, 2021

gulatory
on
el?
)
)
)
)
)
)

All laboratory analytical results of first-draw samples were compared to the NJDEP's Regulatory Action Level of 15.0 ppb for lead. Analysis of lead in the first draw drinking water samples indicated that, at the time of the sampling event, no samples exceeded the action level of 15.0 ppb.

5.0 CONCLUSIONS & RECOMMENDATIONS

New Wave collected first draw samples from drinking water sources throughout the Essex Fells Board of Education school facilities. First draw sample results indicated that no water samples *exceeded* the regulatory action level of 15.0 ppb.

- Continue to monitor lead in drinking water levels as part of a regular sampling and maintenance plan, per New Jersey State regulations testing for lead in drinking water is required every three (3) years.
- Implement an aerator cleaning maintenance program to prevent the build up of debris behind the aerator screen which may contribute to elevated lead levels.
- Enter all filter maintenance, aerator maintenance, plumbing repairs/changes and any other important information into the <u>Field Log Book</u> for each School.
- Use only cold water for food and beverage preparation, as hot water is more likely to contribute to the corrosion of plumbing materials and therefore may contain a greater level of water contaminants from the plumbing system.

6.0 Disclaimer

This investigation focused on lead in drinking water. No other heavy metals or additional contaminants were sampled for/or analyzed. Note: Lead concentrations in water can change as water continues to move through the water system.

Each sample taken was a "grab sample" and represents lead concentrations only at the specific time of collection and <u>may vary</u> based upon the water usage in the facility. Interpretation of these results is only valid if the facility is serviced by a municipal water supplier or water utility.

Our lead sampling event was in response to recent amendments to N.J.A.C. 6A:26i *Educational Facilities* dated October 13, 2016, which requires testing for lead in drinking water of public and charter school districts.

The Lead Hazard Assessment has limitations with regards to identification of actual health and environmental issues. It is limited to only those items listed in the report and all items reflect conditions at the time of the assessment.

New Wave Engineering, LLC warrants only that the contents of this report constitute an informed discussion of the assessment at the subject property and is prepared exclusively for the above noted client. New Wave Engineering, LLC assumes no liability with regards to the use of this information or decisions which are made regarding the subject properties.

Essex Fells Board of Education Lead in Drinking Water Report 2021 It is at the discretion of the Essex Fells School District, given the results and information in this report, to use their own best judgment to determine any appropriate course of action.

7.0 Closing

The drinking water in the Essex Fells Public Schools is below the action level of 15 ppb. Normal utilization of all potable drinking water sources can continue as usual.

Thank you for utilizing New Wave to assist you with this project. Please do not hesitate to call if you have any questions relating to this report or for any other environmental health and safety concerns.
