

Browser Requirements - Updated 04/15/2015

We reserve the right to update our browser requirements at any time, but in general our philosophy is to provide support for all current and recent releases of modern browsers across commonly available operating system platforms.

All browsers utilized with our applications must support the following:

- JavaScript
- Popup Windows
- Session Cookies
- Browser Caching
- TLS 1.0 or greater

The browser support for our applications is broken into three levels, with the release date for the browser version shown:

- **Recommended:** Our recommended browser versions for best results. We do not provide official technical support for use of beta or pre-release browsers on our applications.
- **Supported:** The browser versions for which we will provide technical support and attempt to correct any application issues resulting from a specific browser version.
- **Minimum Usable:** The minimum browser version we believe to be functional for use with our applications.

Windows/Macintosh Browsers:

	Recommended	Supported	Minimum Usable
Microsoft Internet Explorer	11.0+ (Oct 2013)	9.0+ (Mar 2011)	7.0+ (Oct 2006)
Mozilla Firefox	ESR/31+ (Jul 2014)	17.0+ (Nov 2012)	3.0+ (Jun 2008)
Google Chrome	35.0+ (May 2014)	25.0+ (Feb 2013)	1.0+ (Dec 2008)
Apple Safari (Mac only)	7.0+ (Oct 2013)	6.0+ (Jul 2012)	6.0+ (Jul 2012)
Opera	20.0+ (Mar 2014)	15.0+ (Jul 2013)	12.0+ (Jun 2012)

Other Platforms:

Tablets/Phones:	Although we do not currently officially support mobile browser platforms, the majority of current mobile browsers will work correctly with our applications. Please note that certain functionality, such as rich text editing, requires robust JavaScript functionality that some mobile browsers do not fully support.
Linux/*nix:	While we do not officially provide support for *nix platforms, our applications should function correctly in both Chrome and Firefox 4.0+.
