THE ICE CAPS ARE MELTING

Save The Polar Bears

Save The Polar Bears

Ethos Greta Thunberg is a child who is standing up for the climate change... What are you doing?

Logos Climate change is a very present problem as the ice-caps begin to melt, hurricanes become more prominent, and the hole in the ozone become larger only one person can do the job, you.

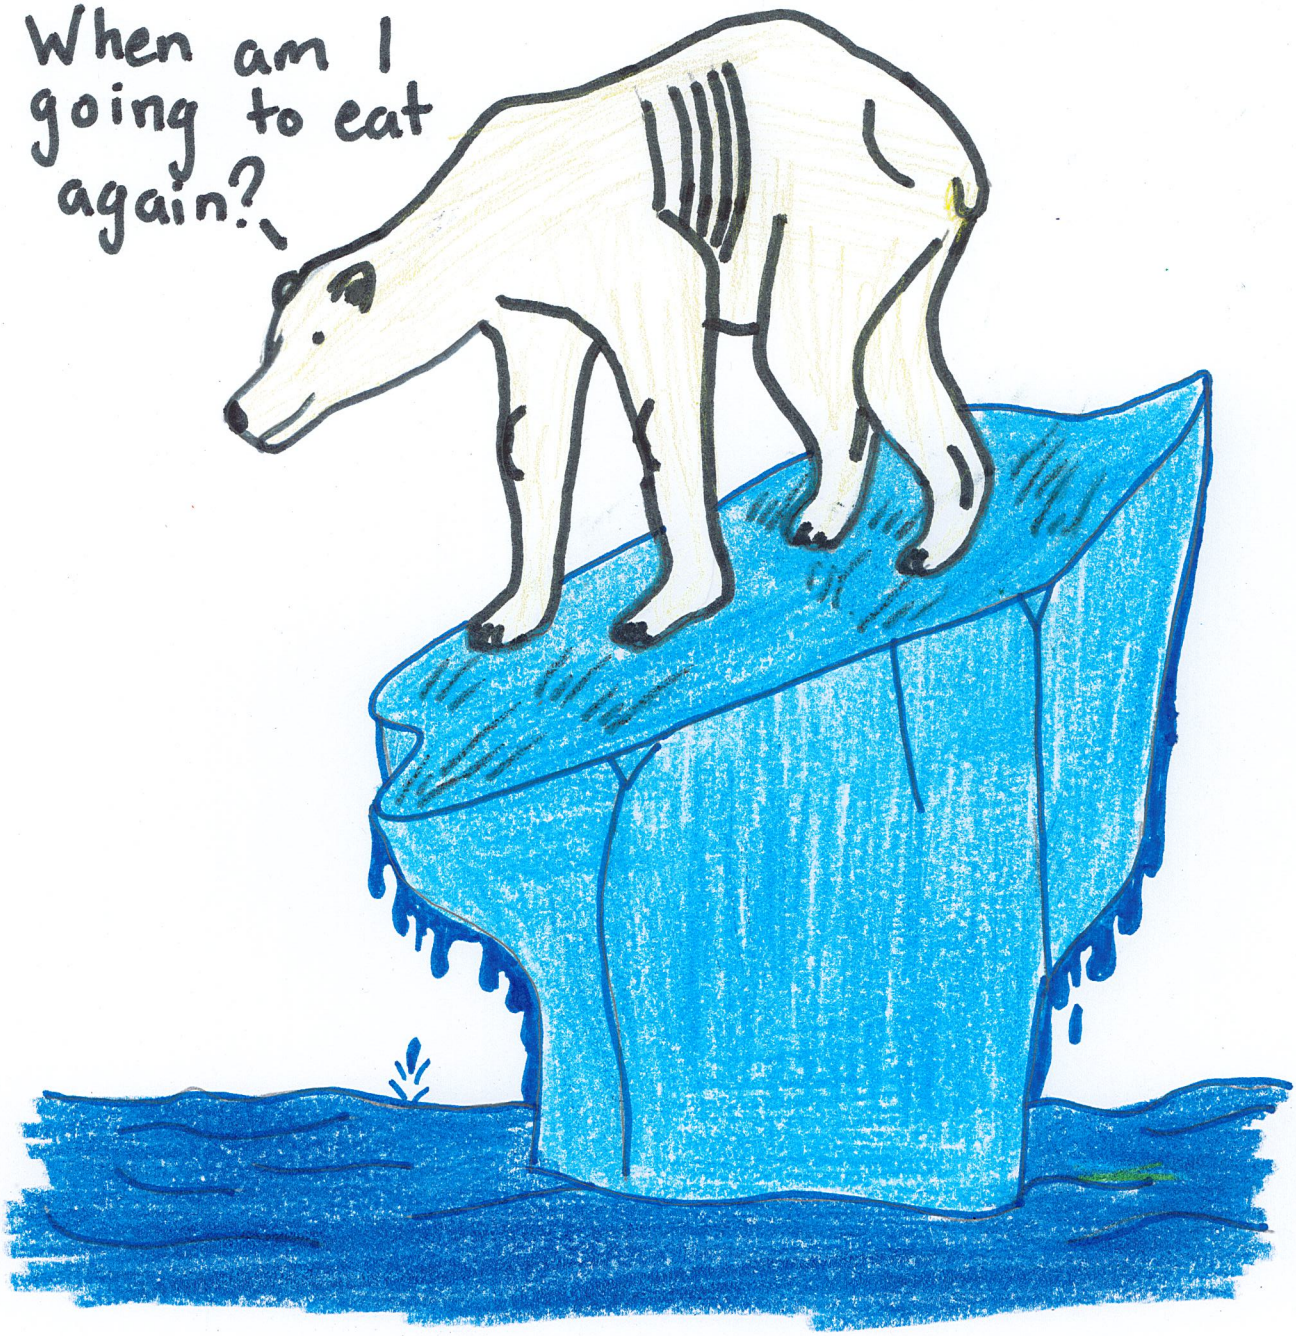

Pathos These bears are losing their homes due to our actions, what will you do to restore their home?

It Starts With You!!

Aliza

"They've found that unless greenhouse gas emissions are reduced, most polar bear populations but not all could be gone by 2100."

Climate Change

Logos: According to the WMO the year 2020 met a new high in temperature. CO_2, CH_4, N_2O levels have increased, 149%, 262%, and 123% of pre-industrial chemical output into 2021.

Pathos: Every year as the ocean's temperature rises it affects nearly a thousand ecosystems. And with our pollution not getting better thousands of species like otters and turtles are suffering our mistakes. It would be wise to make a change in our life's or our most favorable animals will be gone.

Ethos: Greta Thunberg is a valuable source of what is going on. Greta speaks to the U.N. to try and get the fact that climate change is destroying ecosystems. By targeting adults she explains that they have full control on what happens to ecosystem due to the fact children have no say on how the world is treated.

Global Warming will Cook You!

"The evidence is clear that carbon dioxide (CO_2) is the main driver of climate change, even as other greenhouse gases and air pollutants also affect the climate."

"I want you to act as if your house is on fire, because it is."
-Greta Thunberg

"... human activities are responsible for approximately 1.1°C of warming since 1850-1900... global temperature is expected to reach or exceed 1.5°C of warming."

OH NO...
Our world is Burning!

"Nothing has been done to tackle the climate crisis."
-Greta Thunberg

"2021 is a make or break year for climate action"

Climate change can last over at least 400,000 years.

We can make a change to keep the plant Green

WILL WE MAKE IT TO 2030?
