

The board strives to provide a safe and orderly environment for all students and employees. The board also strives to maintain a balance between the need to educate all eligible students, to protect students' and employees' rights, and to control communicable diseases. A communicable disease is defined as an illness due to an infectious agent, or its toxic products, which is transmitted directly or indirectly to a person from an infected person or animal.

A. PRECAUTIONS

In order to prevent the spread of communicable diseases, guidelines for necessary health and safety precautions will be distributed by the administration and will be followed by all school employees. (See board policy 7260, Occupational Exposure to Bloodborne Pathogens) and board policy 7262, Communicable Diseases—Employees). Employees are also required to follow the school system's bloodborne pathogens exposure control plan. Students must not be involved in the handling, disposal and cleanup of potentially infectious materials unless the student has been specifically trained in the handling of such materials and is qualified to perform first aid services. Faculty should take reasonable precautions to avoid allowing students to come in contact with these substances.

B. CURRICULUM

The school district will include health, hygiene and safety education in its curriculum. The curriculum will include age-appropriate information concerning safe health practices that will inhibit and prevent the spread of diseases, including HIV and AIDS. (See board policy 3540, Comprehensive Health Education Program.)

C. REPORTING AND NOTICE REQUIREMENTS

In accordance with G.S. 130A-136, school principals will report suspected cases of communicable diseases, including AIDS, to the county health department. Confidentiality of such reports is protected by law, and school principals are presumed by law to be immune from liability for making such reports in good faith. Without releasing any information that would identify the student, the principal must report suspected cases of communicable diseases, including AIDS and HIV infection, to the superintendent. Parents or legal guardians shall be notified when their child has potentially been exposed to a communicable disease through the exchange of blood with another individual and it will be recommended that they contact their private physician or the county health department for consultation.

The local health director is responsible for determining which school personnel will be informed of the identity of a student with AIDS or HIV infection or other communicable diseases required to be reported. Any employee who is informed or becomes aware of the student's condition shall respect and maintain that student's right of privacy and the confidentiality of his or her records and may not share that information unless specifically permitted to do so by the health director, the student's parents or legal guardian or by other applicable state or federal laws or regulations. Documents relating to a student's HIV or AIDS infection shall be retained in a locked cabinet and shall be released or shared only as necessary to comply with this policy. Employees who are informed of the student's

condition will be provided with appropriate information concerning necessary precautions and will be made aware of the strict confidentiality requirements. Release of this confidential information or records, except as permitted by law, constitutes a misdemeanor and may be subject to further discipline.

In order to address the needs of the student within the school environment, school employees are required to notify the principal if they are aware or become aware of any student suffering from a communicable disease.

Students who are immunodeficient due to AIDS, HIV infections or other causes face increased risk of severe complications from exposure to communicable diseases that appear in the school setting. Accordingly, students and their parents or guardians are encouraged to inform the principal in the event a student suffers from any such immunodeficiency. If notified that a student suffers from such immunodeficiency, the principal, or their designee, should request that the notifying party provide information about what types of exposures might put the student at risk and what reasonable practices can be taken in the school setting to minimize risk to the student. Whenever possible, the principal of a school should notify the parents or guardians of an infected or immunodeficient student of about the existence of chicken pox, influenza, meningococcus, measles, tuberculosis or other contagious disease occurring in the school that may represent a serious threat to the student's health. Students who are removed from school as a result of such conditions will be provided instruction in an appropriate alternative educational setting.

D. EDUCATION/SCHOOL ATTENDANCE FOR STUDENTS WITH AIDS/HIV INFECTION

Students with AIDS and HIV infection will be permitted to attend school without special restrictions except in accordance with 10A N.C.A.C. 41A.0202, and this subsection.

When the local health director notifies the superintendent that a student with AIDS or HIV infection may pose a significant risk for transmission, the superintendent, in consultation with the local health director, will appoint an interdisciplinary committee in accordance with state health regulations and procedures established by the superintendent. The committee is to consult with the local health director regarding the risk of transmission and advise the superintendent regarding the placement of the student. The committee will include appropriate school system personnel, medical personnel and the student's parent or guardian and may include legal counsel. The parent may request additional participants as necessary to appropriately evaluate the risk. The health director shall be responsible for determining whether to add additional members that may be requested by the parents. The superintendent is to inform the board whenever a committee has been formed and will advise the board of the professional composition of the committee.

The interdisciplinary committee will review each case individually in consultation with the local health director to determine: (1) the degree to which the student's conduct or presence in school exposes others to possible transmission or other harm, and (2) what risk the school environment may pose to the infected student. If the local health director concludes that a significant risk of transmission exists in the student's current placement, the committee will must determine whether an appropriate adjustment can be made to the student's school

program to eliminate this risk. If that is not possible, the student shall be provided instruction in an appropriate alternative educational setting which incorporates protective measures required by the local health director will be designed by appropriate school officials.

If the administrative or instructional personnel on the committee determine that the student has limited strength, vitality or alertness due to a chronic or acute health problem that adversely affects the student's educational performance, they must refer the student for possible identification and placement as a student with special needs.

All deliberations of the interdisciplinary committee will be kept strictly confidential and shared only as allowed by law.
