## Leprechaun Subtraction

Directions:

1. Roll the die to see who goes first. The player with the highest number goes first and then play continues to the left.
2. The first player will roll the die. If they get an odd number they will move 1 space. If they get an even number they will move 2 spaces. When they land on a problem they will solve the problem on the blank game board. (Both players solve the problem to make sure their partner is correct!). If they don't get it right they will move back to the previous space! If they do get it right, they stay on that space.
3. Then the next player will follow the same steps.
