OSHKOSH AREA SCHOOL DISTRICT PROJECT PROGRESS REPORT

CONSTRUCTION UPDATE

Construction continues at Menominee Elementary School, with many contractors on site. Major progress has been made to both the exterior and interior of the building. Progress is particularly noticeable on the east side of the site where exterior steel is rising at the main office and media center. The cafeteria and the two-story academic portions are now fully enclosed, allowing Miron Construction to use temporary heat in those areas so concrete floors can be placed, drywall can be hung, and other trades can stay active on the site.

Design work for building's environmental branding graphics continues. The district plans to place these graphics in strategic locations throughout the building, including community impact areas and near each grade level. Keep an eye out for future progress reports that will include renderings of the proposed graphics.

WHAT'S NEXT?

- » Steel studs in the two-story portion are being covered with drywall and prepping for paint.
- » Structural steel over the office and media center will be completed, with roof decking and insulation to follow.
- » Ductwork, piping, and electrical rough-ins are being installed throughout the building.
