

Chromebook Gestures

While all of us are familiar with laptop touchpads, chromebooks utilize their own “gestures” to help with navigation.

To **left-click** on an item, just tap like a normal touchpad or press down the lower half of the entire touchpad.

To **right click** on an item, press down with both fingers or hold down Alt and single click. Use three fingers to **middle click**.

To **scroll** in a document or webpage, place two fingers on the touchpad and move them up and down or left and right.

To **drag and drop** an item, click what you want to move with one finger. With your second finger move the item. Release both fingers to drop it.
