

Great for the whole family

By Berkley Schoof

Roblox is a game that was created in 2006 by David Baszucki also known as "Builder man".

The concept for this game, Roblox to be an all-inclusive game that is fun for all ages. And in my opinion, that is exactly what it is. On Roblox you can play games that were made by other users and players. Some of the most popular games created by players include: "Blox fruits", "Adopt me", and the "strongest battle grounds". Roblox can attract users of all ages and is a great family game!

Very versatile, Roblox has almost any game you can think of from

fighting to building a city! "Blox fruits" is a fighting/simulator game. "Adopt me" is a game where you raise pets and adopt them! The "Strongest battle grounds" is an anime fighting game that has great graphics! And on another topic, Roblox won several awards, including a best rating award in 2018. Just recently ROBLOX updated for consol to improve and fix bugs! Roblox can play on pc mobile and game console. So, it is suitable for everyone! And Roblox is free to play! And you can download it from any store!

Game review from Common Sense Media: "Roblox is a creation website that kids can make their dream games. Kids can also play other people's games. They can also edit their account to fit their age limit. And we rate it a four out of five stars!"

So, in conclusion Roblox is a great family game, and I would recommend it to everyone!

- Testing strengthens teaching practices and helps us to meet the needs of each student.
- Testing is one piece of data that helps to ensure that you are on track with post-secondary readiness (college, workforce, military)
- Star & CMAS tests, help to show your growth within a school year and whether you are mastering your grade level skills.
- CMAS provides you with an opportunity to practice your test-taking skills that you will need for other tests throughout your life – SAT or ACT, ASVAB.
- Strengthens your critical thinking skills and reasoning skills.
- Identifies problematic Schools/Districts.
- High stakes testing, that does not provide any feedback on how to perform better in the future.
- Doesn't value creativity or cultural diversity.
- The tests favor those who have socio-economic advantages. As, this is the norm group.
- Given in an artificial learning environment: they're timed, you can't ask questions, you can't use references or learning devices.
- Creates stress. Some kids do well with a certain level of stress, Other students do not.
- Reduce a student's experience and learning to a number or letter grade. Basing a person's knowledge on a set of questions rather than a discussion, or a hands-on project.

So, whether you agree with taking the CMAS and Star tests, it's necessary. Please remember; **Teachers want you to succeed, because we believe in you!**

So, before taking these tests, get a good night's rest, eat a good breakfast and Don't stress out...just try your best, take your time, read the questions carefully and choose the best answer.

Best of Luck, You got this!
