PROTECTING YOUR PROMETHEAN SYSTEM

1. First, power down (turn off) the video projector using the remote control.

2. Allow the video projector to cool down for *10 minutes*.

3. Next, unplug the Promethean system from the wall.

4. Look behind the upper left of the Promethean for this box. This is the control center for the system and the portion of the board that needs to be covered in the event of water leakage.

5. Cover upper left of board (front and back) with a heavy duty garbage bag insuring you cover the box shown in Step 4.

of

6. Tape the garbage bag at the top of the Promethean by placing the tape either on the back the Promethean system or to the frame as shown on the left. **DO NOT PUT TAPE ON ANY PORTION OF THE FACE (WHITE PART) OF THE BOARD!**

7. Also, tape the garbage bag on the left side of the Promethean by placing the tape either on the back of the Promethean as shown on the left or to the frame as shown in Step 6.

8. Last, cover the COOLED video projector with a bag. Run the tape around the bag along the boom. Do not tape it to the boom.

9. Now you and your Promethean are prepared. ☺
