Educating today's learners for tomorrow's world.

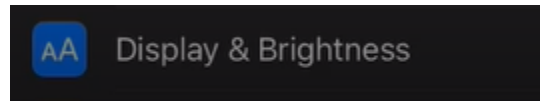

How to Apply Auto-Lock

It is important that auto-lock is set to on. This will ensure that if the device is left alone at any point, the information within the device will remain safe. The auto-lock increments are 2, 5, 10, or 15 minutes. Users should NEVER select *Never* as the auto-lock option.

1. Open **Settings**

2. Scroll down and on the left hand side click **Display & Brightness**

3. Click on **Auto-Lock** and select the appropriate times for you.
