## Pine-Richland School District Academic Achievement Report Executive Summary

### Introduction

The mission of the Pine-Richland School District is *to provide a strong academic foundation which challenges students to realize their fullest potential and encourages them to become engaged, thoughtful citizens*. The teaching and learning processes of the district serve as the core method for achieving that mission. From an educational perspective, we focus on the three big topics of curriculum, instruction, and assessment as the important elements of a successful program. These areas are naturally connected in the day-to-day operation of schools.

From a broad perspective and as a strategic priority, we are working to develop benchmarks of success as the method for evaluating the progress of the district. This concept of a “balanced scorecard” will encompass a wide variety of indicators for organizational excellence. It is our intention to focus on a combination of process improvements and a results orientation. Although this concept is a current work-in-progress, the basic framework surrounds the following:

However, the bottom line for public school districts relates to the evidence of academic achievement and learning. It is not the only important measure, but it is a fundamental measure of schools. This is the first comprehensive *Academic Achievement Report* developed at the Pine-Richland School District that attempts to consolidate key results into one resource. It is a first iteration. Over time and similar to other aspects of organizational improvement, we expect to refine this approach and achieve higher levels of integration of results into the core areas of curriculum, instruction, and assessment. A data-driven approach is something that becomes embedded into the culture of an organization over time.

With data, we want to consider several important concepts:

*“Assessment of Learning” vs. “Assessment for Learning”*

Most of the data included in this data analysis report falls under the “*assessment of learning*” category. In many cases, we are reporting levels, trends, and comparisons of performance on end-of-year tests (e.g., PSSA, SAT, ACT, and AP exams). It is important to analyze these results. Sometimes, though, the analysis of summative data can lead to the “DRIP” concept (i.e., Data Rich Information Poor). As a future-focused goal, it is even more necessary to begin emphasizing the role of “*assessment for learning*” in our educational program. In this way, we utilize formative assessments at the beginning of a unit of instruction to help make instructional decisions about the whole class and individual students. When teachers utilize formative assessments, they are able to create flexible groups and/or differentiate their approach to meet the needs of the learners. This is a challenging but important concept in education.

## Report Overview

The 2013 *Academic Achievement Report* describes data from the 2012-2013 school year and places it within a five year history. To the greatest extent possible, this summative data is provided in a visual manner to illustrate levels, trends, and comparisons of performance. Disaggregated results by gender help provide further insight into student achievement levels. The results of standardized tests included in this report are:

- Pennsylvania System of School Assessment (PSSA);
- Keystone Exams;
- Performance PLUS with select examples;
- Pennsylvania Value-Added Assessment System (PVAAS) with select examples;
- Scholastic Aptitude Test (SAT);
- American College Test (ACT); and
- Advanced Placement (AP) Exams.

As we continue to focus on organizational improvement, it is the intention of the Pine-Richland School District to utilize data as one important element in a series of systematic processes. There is usually a significant gap between the administration of standardized tests and the ability of the district to analyze results. Students have generally transitioned to the next grade level and to a different course in the content area sequence. Summative assessments, therefore, serve as “lagging indicators” of student learning. It is important information, but it is only one piece of a comprehensive approach. Emerging statistical analyses, such as the Pennsylvania Value-Added Assessment System (PVAAS), provide important information about the growth of students over time. The combination of measures is being embedded into the Pennsylvania School Performance Profile and into the new Educator Effectiveness model as well. We intend to engage principals and teacher-leaders more heavily in the future iterations of this process.

## Overview of Assessments

### Pennsylvania System of State Assessment (PSSA)

Chapter 4 of the State Board of Education regulations outlines assessments for mathematics and reading skills of students in grades 3 through 8; an assessment for writing skills of students in grade 5 and 8; and an assessment for science skills of students in grades 4 and 8. Chapter 4 has been revised recently and the impact of those revisions will become clearer in the upcoming months. The PSSA is the Pennsylvania Department of Education's assessment to meet the requirements of No Child Left Behind (NCLB). The PSSA is administered annually.

The following performance levels are utilized:

**Advanced:** The Advanced Level reflects superior academic performance. Advanced work indicates an in-depth understanding and exemplary display of the skills included in the Pennsylvania Academic Standards.

**Proficient:** The Proficient Level reflects satisfactory academic performance. Proficient work indicates a solid understanding and adequate display of the skills included in the Pennsylvania Academic Standards.

**Basic:** The Basic Level reflects marginal academic performance. Basic work indicates a partial understanding and limited display of the skills included in the Pennsylvania Academic Standards. This work is approaching satisfactory performance but has not yet reached it. There is a need for additional instructional opportunities and/or increased student academic commitment to achieve the Proficient Level.

**Below Basic:** The Below Basic Level reflects inadequate academic performance. Below Basic work indicates little understanding and minimal display of the skills included in the Pennsylvania Academic Standards. There is a substantial need for additional instructional opportunities and/or increased student academic commitment to achieve the Proficient Level.

### Keystone Exams

The Keystone Exams are end-of-course assessments designed to assess proficiency in the subject areas of Algebra I, Literature, and Biology. These exams have replaced the grade 11 PSSA tests in reading, mathematics, writing, and science. The Keystone Exams are one component of Pennsylvania's new system of high school graduation requirements. For accountability purposes, the results of these exams will be utilized as the high school assessment related to NCLB and the new Pennsylvania School Performance Profile.

For each assessment, similar performance levels to the PSSA are utilized (i.e., Advanced, Proficient, Basic, and Below Basic). The overall performance level is based on the score earned in two testing modules. One of the main differences in the Keystone Exams is the fact that three different testing windows are available each year in the Winter, Spring, and Summer. Non-proficient students are required to retake the exam. The best two module scores are combined to recalculate the overall performance level. School districts have the responsibility of some form of supplemental instruction for non-proficient students.

### PerformancePLUS

The Pine-Richland School District purchased PerformancePLUS as a data warehouse tool for state and local assessments. Data is uploaded from a variety of sources into this system to allow for various analyses at the district, school, grade level, classroom, and student levels. Select analyses are included in this report to illustrate the nature of information generated by PerformancePLUS.

**Pennsylvania Value-Added Assessment System (PVAAS)**

The Pennsylvania Value-Added Assessment System (PVAAS) is a statistical analysis of state assessment data and provides Pennsylvania districts and schools with growth data to add to achievement data. This lens of measuring student learning provides educators with valuable information to ensure they are meeting the academic needs of groups of students, as well as individual students. PVAAS is one of the tools provided to districts from the Pennsylvania Department of Education. Districts and schools are using PVAAS (growth data), in conjunction with achievement data, to make sure students are on the path to proficiency and beyond.

**Scholastic Aptitude Test (SAT)**

As written on the College Board website, the SAT is a globally recognized college admission test that lets students show colleges what they know and how well they can apply that knowledge. It tests knowledge of reading, writing and math — subjects that are taught every day in high school classrooms. Most students take the SAT during their junior or senior year of high school, and almost all colleges and universities use the SAT to make admission decisions. For each of the sub-tests, a score of 800 is possible for a combined total of 2400. The results can be compared on a state and global level.

**American College Test (ACT)**

The ACT assessment measures skills in English, reading, mathematics, and science reasoning. These areas are tested because they include the major areas of instruction in most high school and college programs. The ACT college readiness assessment is a curriculum- and standards-based educational and career planning tool that helps assess students' academic readiness for college. For each sub-test, a score of 36 is possible. Based on all four scores, an overall composite score is also calculated. The results can be compared on a state and national level.

**Advanced Placement (AP)**

The Advanced Placement Test is a test on which students demonstrate and confirm mastery of particular subjects. Student performance on AP Tests are graded one through five, with a grade of five indicating a student who is well-qualified to receive college credit and/or advanced placement.

**Pennsylvania School Performance Profile (SPP)**

The PA School Performance Profile is designed to:

- Provide a building level academic score as part of the Educator Effectiveness (Act 82) beginning in 2013-2014;
- Inform the public of the performance of each public school, comprehensive career and technical center, cyber charter, and charter school in Pennsylvania; and
- Provide parents and taxpayers with performance measures for the school/district of residence, neighboring schools/districts, and school/ districts across the state.

The score for a school is based upon indicators that define a high performing school, including Indicators of Academic Achievement (40%), Indicators of Academic Growth/PVAAS (40%), Indicators of Closing Achievement Gaps (10%); and other Academic Indicators (10%).

## **Pennsylvania System of State Assessment (PSSA)**

In the pages that follow are results for five years of PSSA tests for math, reading, writing, and science in grades 3 through 8. Also included are the 2013 test results for math, reading, writing, and science assessments disaggregated by gender. Historic data for grade 11 is given from 2009-2012 only. In 2013 Pennsylvania eliminated the grade 11 PSSA as a measure of student achievement and began to require instead that students pass exams called Keystones in individual subject areas. Keystone exam results are given in the next section.

For math and reading results in grade 3, performance level results are shown first, individual primary school results are given second, and gender differences in performance levels are presented third. For all tests in grades 4-8, performance levels for each grade are given first followed by gender differences. For each test reported, state level data for the year 2012 are given for comparative purposes. Test results are reported with data tables presented on the left and graphs of the results shown directly opposite on the right.

For each assessment, a page of findings and suggested areas for future study is included at the end of the test results, data tables, and graphs. Below is a table of contents for the detail of this section.

- Math Results, pages 8 - 17.
- Math Findings and Areas for Future Study, page 19.
- Reading Results, pages 20 - 29.
- Reading Findings and Areas for Future Study, page 31.
- Writing Results, pages 32 - 33.
- Writing Findings and Areas for Future Study, page 35.
- Science Results, pages 36 - 37.
- Science Findings and Areas for Future Study, page 39.

## **PSSA Math: Results and Findings**

- Pine-Richland students consistently outperform the state average in all grade levels and tested areas.
- Based on 2013 results, PRSD achieved 90% or above combined advanced/proficient results in PSSA math for the first time at all grade levels.
- All grades met the state target of 89% proficient in math.
- From a broad perspective, a five year comparison of PRSD levels and trends in mathematics indicates high, stable scores.
- In 3<sup>rd</sup> grade math, 94.6% of students scored at the advanced/proficient level. A three year trend indicates a slight decline in the advanced/proficient performance level. In 2013, 3<sup>rd</sup> grade advanced/proficient data are among the lowest percentages in the last five years.
- In 3<sup>rd</sup> grade overall the percent of students scoring basic has increased for the past three years with 5.1% in 2013, a five year high.
- In 5<sup>th</sup> grade math, 91.4% of students scored at the advanced/proficient level. A five year positive trend indicates an increase in students at the advanced level (i.e., 64.4% last year). A five year trend also demonstrates a decrease in the percentage of students scoring at the below basic level (i.e., 0.3% last year).
- Except for 5<sup>th</sup> grade, percentages of students scoring at the advanced/proficient level in all other grades decreased in 2013 from 2012.
- In PSSA math, the 2013 results demonstrate that male and female students are performing at similar levels across all tested grade levels.
- With respect to combined advanced/proficient performance in PSSA math, females outperform males in grades 3, 5, 6, 7, and 8. The differences do not appear significant.

## **Areas for Future Study**

- What change, if any, has occurred in the curriculum and instructional approach with mathematics at all levels of the program?
- What are the specific standards or eligible content areas that are strengths? Opportunities for improvement? What trends exist, if any, related to content?
- Given the high level of achievement on the PSSA math exams, are students – in general and by performance groups – making “a year’s worth of growth in a year’s time”?
- Do the PSSA gender differences continue at the high school level?

## **PSSA Reading: Results and Findings**

- From a broad perspective, a five year comparison of PRSD levels and trends in reading indicates high, stable scores.
- From a state-wide perspective, the “average” combined advanced/proficient results for students in reading are approximately 8% lower than the “average” combined advanced/proficient results in mathematics.
- From a broad perspective, PRSD students are outperforming the “state average” in a similar ratio in both reading and mathematics.
- In 3<sup>rd</sup> grade reading, 90.9% of students scored at the advanced/proficient level. A three year trend indicates a slight increase in the percentage of students scoring at the below basic level (i.e., 5.1% in 2013 from 4.3% last year). A similar below basic trend occurs in 4<sup>th</sup> grade and 8<sup>th</sup> grade.
- In 8<sup>th</sup> grade, 94% of students scored at the advanced/proficient level.
- Every grade level saw a decrease in the percentage of students scoring in the advanced/proficient level from 2012 to 2013 with 5<sup>th</sup> grade having the smallest decrease.
- Given the high, stable results in reading, little additional trend data is evident from an analysis of achievement results on the PSSA.
- In PSSA reading, the 2013 combined advanced/proficient results demonstrate that female students are outperforming male students at all grade levels. In many cases, this gap approaches or exceeds a 10% difference.
- In PSSA reading, the 2013 results demonstrate that a greater percentage of male students perform at the basic/below basic level than do female students, a gap that approaches or exceeds a 10% difference.

## **Areas for Future Study**

- What change, if any, has occurred with the reading curriculum at all levels of the program?
- What are the specific standards or eligible content areas that are strengths? Opportunities for improvement? What trends exist, if any, related to content?
- Given the high level of achievement on the PSSA reading exams, are students – in general and by performance groups – making “a year’s worth of growth in a year’s time”?
- How can more students achieve at the advanced level for reading?

## **PSSA Writing: Results and Findings**

- In the area of writing, the state “average” percentage for the advanced performance level is markedly lower than any other assessment.
- For NCLB accountability purposes, Pennsylvania has set no proficiency targets for writing.
- PRSD performance on the PSSA writing assessment is stable with little trend information.
- The percentage of students at the advanced level is markedly lower than that of the proficient level. This effect is different first, from math test scores in which the percentage of students scoring advanced is, at each grade level, much higher than proficient, and second, from reading test scores in which the percentage of students in advanced rather than proficient grows across the grade levels.
- The possibility of moving more students into the advanced category exists.
- In PSSA writing, the 2013 combined advanced/proficient results demonstrate that female students outperform males by 24% and 9% in the 5<sup>th</sup> and 8<sup>th</sup> grade respectively.
- This same performance gap exists in the combined basic and below basic category with a greater percentage of male students scoring basic and below basic than female students.

## **Areas for Future Study**

- What are the specific standards or eligible content areas that are strengths? Opportunities for improvement? What trends exist, if any, related to content?
- What kinds of writing are assigned at the primary and upper elementary levels? How rigorous are they?
- How can more students score advanced in writing?
- Do the PSSA gender differences continue at the high school level?
- How can the achievement of boys be better supported?
- Would a consistent, developmentally appropriate rubric help improve the type and consistency of feedback in writing assignments?

## **PSSA Science: Results and Findings**

- In 4<sup>th</sup> and 8<sup>th</sup> grade, PSSA science results indicate a high level of combined advanced/proficient performance compared to the state.
- For NCLB accountability purposes, Pennsylvania has set no proficiency targets for science.
- In PSSA science, less than one percentage point separates the performance of male and female students at the advanced/proficient level in both 4<sup>th</sup> and 8<sup>th</sup> grade.
- In 4<sup>th</sup> grade, the percentage of students scoring advanced is the same for both male and female students.
- In 8<sup>th</sup> grade, the percentage of male students scoring advanced (50%) is almost twice the percentage of female students scoring advanced (27.7%).
- In 8<sup>th</sup> grade, a five year positive trend demonstrates an increase in advanced/proficient performance, from 75.2% in 2009 to 84.5% in 2013, a five year high.
- A three year positive trend in 8<sup>th</sup> grade demonstrates a decrease in students scoring basic, from 14.7% in 2009 to 10.6% in 2013, a five year low.

## **Areas for Future Study**

- What are the specific standards or eligible content areas that are strengths? Opportunities for improvement? What trends exist, if any, related to content?
- In what ways do the math and science standards reinforce each other?
- How can science be integrated into other content areas?
- Do the PSSA gender differences continue at the high school level?

## Keystone Exams

The Keystone Exams are end-of-course assessments designed to assess proficiency in designated subject areas. In 2013 Keystone Exams were given in Algebra I, Literature, and Biology. The Algebra I and Literature Keystone Exams include items written to the Assessment Anchors/Eligible Content aligned to the Pennsylvania Common Core Standards in Mathematics and English Language Arts. The Biology Keystone Exam includes items written to the Assessment Anchor/Eligible Content aligned to the enhanced Pennsylvania Academic Standards for Science.

Beginning in 2013, the Keystone Exams have replaced the grade 11 PSSA tests in math, reading, writing, and science. Student performance is measured with the same levels as the PSSA tests: advanced, proficient, basic, and below basic. The Keystone Exams are one component of Pennsylvania's new system of high school graduation requirements. The results of these exams at the student level serve as high school accountability measures for both federal and state purposes.

In the pages that follow are:

- 2013 Keystone Exam Performance Data, pages 42 - 43.
- Findings and Areas for Future Study, page 44.

**Pine-Richland School District

**2013 Keystone Algebra I**

**2013 Keystone Literature**

**2013 Keystone Biology**

### **Keystone Exams: Results and Findings**

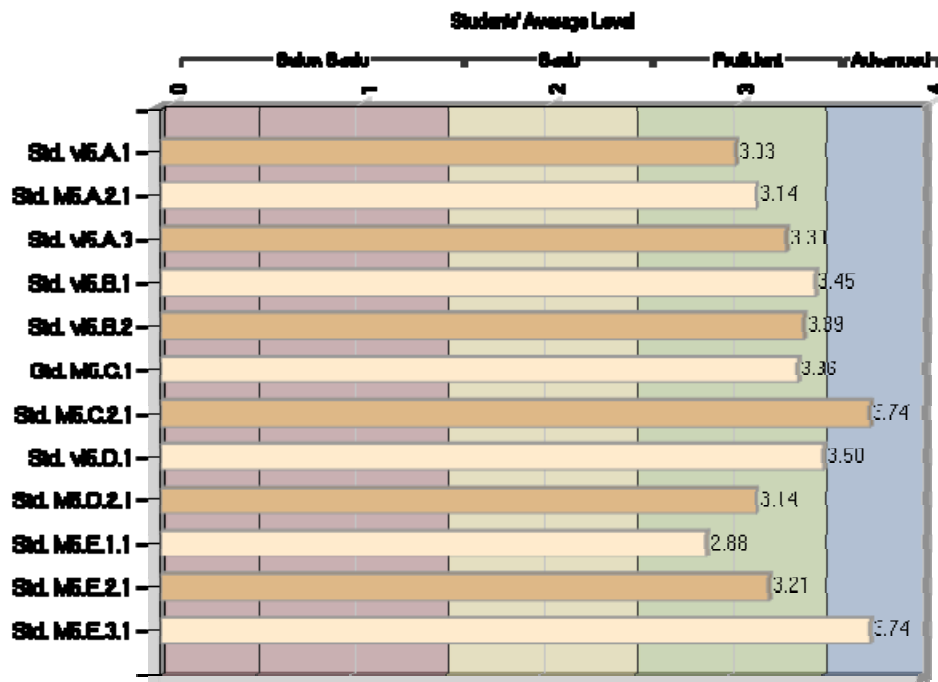

- Keystone Exam results become more difficult to analyze given the fact that testing occurs across multiple windows and the same test is given at multiple grade levels. In addition, the student’s “best” performance reflects the combination of their best two “modules” of performance.
- In an analysis of 2013 results, student performance demonstrates a clear link to the pathways and course sequence for students in the areas of Algebra 1 and Biology. This may indicate that the placement system is functioning effectively.
- In the area of Literature, a decision can be made by PRSD to test at any time. The 2013 results show similar performance results when the test was taken by 9<sup>th</sup> and 10<sup>th</sup> grade students. By continuing to test in 9<sup>th</sup> grade, the district can focus intervention strategies on a smaller number of students in grade 10 and beyond.

### **Areas for Future Study**

- What are statewide averages?
- How does the Keystone Exam performance correlate to the final report card grade of each student in each subject area?
- Does student performance on Keystone Exams correlate to performance on other tests, such AP exams?

### PerformancePLUS Data Warehouse

At Pine-Richland, PSSA data is uploaded from the DRC file format into the eSchool data warehouse system known as PerformancePLUS. Report tools within PerformancePLUS allow the district to drill into the PSSA data to identify levels and trends by Standard/Assessment Anchor/Eligible Content. We have included some sample data to demonstrate the usefulness of this system. The following table provides a snapshot of the 2012-2013 5<sup>th</sup> Grade Math results:

#### Relative Strengths

Organized by the standards, the following areas demonstrate the highest level of combined achievement by last year’s fifth grade students:

- M5.C.2.1 Analyze transformations and/or use symmetry to analyze mathematical situations. (Reference: 2.9.5.K, 2.9.5.L)
- M5E.3.1 Predict or determine all possible combinations, outcomes and/or calculate the probability of a simple event. (Reference: 2.7.5.E, 2.7.5.H, 2.7.5.J)

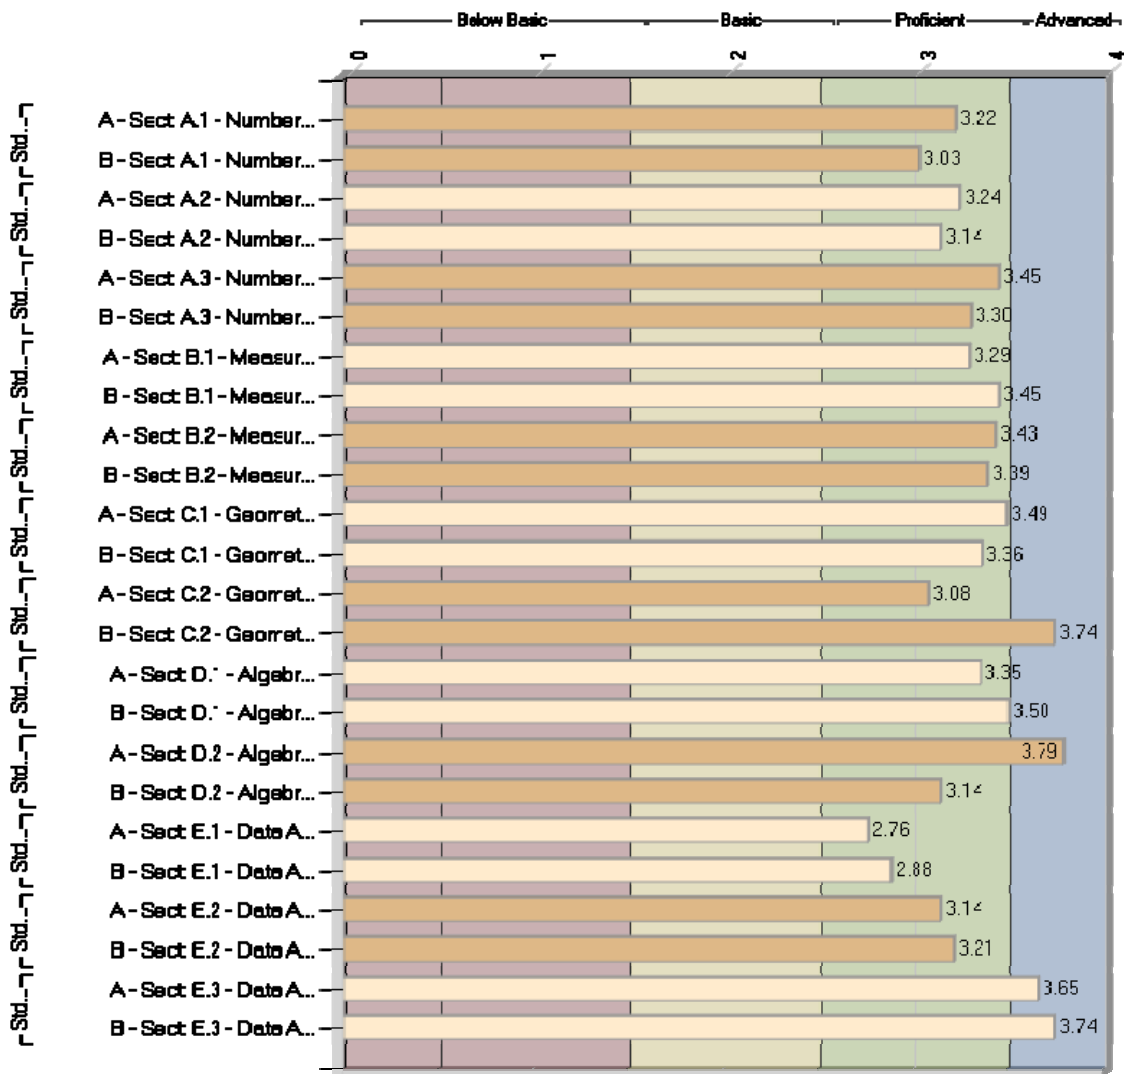

#### Relative Needs

In a similar manner, the lowest areas of performance were:

- M5.E.1.1 Organize, display and/or interpret data using pictographs, tallies, tables, charts, line, bar graphs. (Reference: 2.6.5.A, 2.6.5.C)
- M5.A.1 Numbers and Operations: Demonstrate an understanding of numbers, ways of representing numbers, relationships among numbers and number systems.
  - M5.A.1.1 : Express numbers in equivalent forms. (Reference: 2.1.5.A)
  - M5.A.1.2 : Demonstrate understanding of place value of whole numbers and decimals. (Reference: 2.1.3.I)
  - M5.A.1.3 : Compare quantities or magnitudes of numbers. (Reference: 2.11.5.A)
  - M5.A.1.4 : Use simple applications of negative numbers (number line, counting, temperature). (Reference: 2.1.5.F)

- M5.A.1.5 : Use or develop models to represent fractions and/or mixed numbers. (Reference: 2.1.5.D)
- M5.A.1.6 : Apply number theory concepts (i.e., primes, factors, multiples, composites). (Reference: 2.1.5.E)

As another example and extension of data analyses in PerformancePLUS, we also have the ability to compare different cohorts across the same assessment to determine trend performance by standard. This allows us to draw conclusions and/or inferences about areas of strength and focus. The following table compares a snapshot of 2011-2012 5<sup>th</sup> Grade Math (A) vs. 2012-2013 5<sup>th</sup> Grade Math (B):

From a data analysis perspective, we have the tools to continue “drilling down” through the data to look for trends or levels that lead to additional questions. For example, we can now see that *M5.E.1.1- Organize, display and/or interpret data using pictographs, tallies, tables, charts, line, bar graphs* is the lowest performance standard for two years with two different sets of students. We can now ask a set of more specific questions about curriculum, alignment, instructional approach, etc. The purpose of this PerformancePLUS example is to demonstrate the fact that a variety of data tools exist to evaluate student performance and determine potential modifications in our instructional and curricular approach.

## **Pennsylvania Value-Added Assessment System (PVAAS)**

For many years, school district performance and student learning was purely measured by achievement levels on the PSSA. The combined percentage of advanced and proficient students was used to comply with NCLB and determine adequate yearly progress (AYP). As a result, much attention was given to non-proficient students with less of a clear understanding of or focus on strategies to ensure that all students are growing in their learning as measured by the PSSA.

Advanced statistical methodologies have been developed to utilize available assessment results for students and cohorts of students to determine the degree of learning (i.e., growth). This is to help discern whether the students have made “one year of progress in one year’s time.” Both achievement and growth have become an even bigger emphasis in Pennsylvania as they relate to educator effectiveness (i.e., Act 82). Achievement and growth data combine to form various elements of the Pennsylvania School Performance Profile.

PVAAS has two primary purposes:

- Look back at school performance; and
- Look forward at individual student projections.

The 2013 PVAAS reports which are based on the 2012-2013 testing year were not available at the time this report was developed. Similar to PerformancePLUS, sample PVAAS analyses are included in this report to highlight the opportunities for data-driven decision-making in the district. A significant amount of training will be necessary to ensure that administration and staff are confident with the purpose and function of the PVAAS model. It will take time, communication, and ongoing training to embed this approach into the district.

The following examples are included for illustration purposes:

- Value-Added Report: Provides an overview of a building so the administration and staff can quickly identify strengths and challenges.
- Performance Diagnostic (Single Grade): Used to further disaggregate growth by predicted performance levels. It can be helpful when attempting to see the effectiveness of interventions and extensions.
- Quintile Diagnostic (Single Grade): Since PRSD has many high achieving students, this reports helps us further stratify a grade level.

The following table provides a snapshot of the 2012 District Value-Added Reading results:

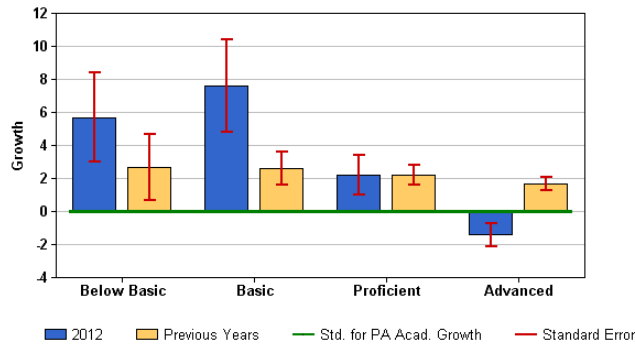

Estimated District Growth Measure								
Grade	3	4	5	6	7	8	Growth Measure over Grades Relative to

DB	Significant evidence that the district exceeded the standard for PA Academic Growth
LB	Moderate evidence that the district exceeded the standard for PA Academic Growth
G	Evidence that the district met the standard for PA Academic Growth
Y	Moderate evidence that the district did not meet the standard for PA Academic Growth
R	Significant evidence that the district did not meet the standard for PA Academic Growth

Achievement results (PSSA) and growth results (PVAAS) must be used together to get a complete picture of student learning.  
 PA Academic Growth defined as:  
**Math & Reading Grades 4-8:** The standard for PA Academic Growth is met when the student group makes one year's growth/maintains their relative achievement level from one year to the next in relation to the statewide distribution (2006 baseline).

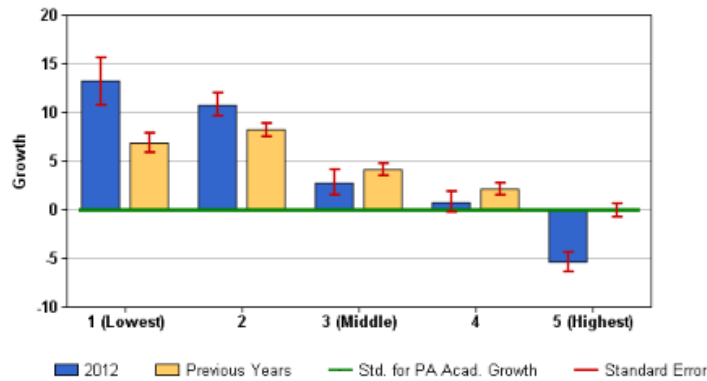

For the purpose of this initial report and presentation, a high level explanation of the *District Value-Added* report will be provided. The key at the bottom reflects the color/rating system. In the middle section, the “Estimated District Avg Achievement” outlines the normal curve equivalent score (NCE) that is used to report PSSA results by that cohort of students. It can be interpreted in a similar manner as percentile scores. In the top section, we see a single year and three year analysis of the learning progress made by a cohort in each grade level. The “Growth Measure over Grades” demonstrates the overall “net effect” of the district’s educational programs on student learning. Again, this analysis is confined to performance on the PSSA reading assessment.

The following table provides a snapshot of the 2012 District Performance Diagnostic results for seventh grade mathematics:

			Predicted Performance Level Group			
			Below Basic	Basic	Proficient	Advanced
Math	Std. for PA Acad. Growth		0.0	0.0	0.0	0.0
	2012	Growth	5.7	7.6	2.2	-1.4
		Standard Error	2.7	2.8	1.2	0.7
		# of Students	10	13	58	226
		% of Students	3.3	4.2	18.9	73.6
	Previous Years	Growth	2.7	2.6	2.2	1.7
		Standard Error	2.0	1.0	0.6	0.4
		# of Students	26	85	255	602
		% of Students	2.7	8.8	26.3	62.2

The following table provides a snapshot of the 2012 District Quintile Diagnostic results for eighth grade mathematics:

			Prior-Achievement Quintile Group				
			1 (Lowest)	2	3 (Middle)	4	5 (Highest)
Math	Std. for PA Acad. Growth		0.0	0.0	0.0	0.0	0.0
	2012	Growth	13.2	10.8	2.8	0.8	-5.4
		Standard Error	2.4	1.2	1.3	1.1	1.0
		# of Students	18	41	63	100	111
		% of Students	5.4	12.3	18.9	30.0	33.3
	Previous Years	Growth	6.9	8.2	4.1	2.1	-0.1
		Standard Error	1.0	0.7	0.6	0.6	0.7
		# of Students	84	202	233	271	261
		% of Students	8.0	19.2	22.2	25.8	24.8

Growth is defined as average gain

Again, a high level explanation of this particular report will be provided. The *District Value - Added* report summarizes the growth of the entire cohort of students at a grade level. In order to look at smaller segments of each cohort, the *District Performance Diagnostic* and *District Quintile Diagnostic* reports are designed to look at student growth in a smaller cohort based on their past performance. The performance diagnostic report measures the growth based on prior performance level (i.e., Did students at the advanced level on the prior assessment maintain their relevant position to other advanced students on the new assessment? To what degree did that occur?). In the quintile diagnostic report, a deeper level of stratification occurs. This report is helpful when a district, like Pine-Richland, has a high percentage of students at the advanced level. It helps differentiate between “levels of advanced performance” in the analysis process. Each of these different tools helps the continuous improvement process.

## Scholastic Aptitude Test (SAT)

The SAT is published by the College Board and administered typically to juniors and seniors in high school. Many colleges and universities require that applicants take the SAT as part of their admissions processes. The SAT is a four hour test that measures the critical thinking skills students need for academic success in college. Tests are given in math, critical reading, and writing. SAT scores are one indicator of a student's potential to do college work.

Each SAT test has a maximum score of 800 points; perfect scores on all three tests result in a combined score of 2400. The mean test score is set by the College Board at or near 500 in the score scale of 200-800. In 2013 the Pennsylvania School Performance Profile tracks the number of grade 12 students scoring 1550 or higher on the SAT. At Pine-Richland, 235 out of 328 seniors (71.6%) met this mark.

In the pages that follow are SAT test results for the past five year for math, critical reading, and writing for Pine-Richland School District, Pennsylvania and the Total Group. The Total Group refers to all students both nationally and internationally who took the SAT test. Also given is five years of participation data for Pine-Richland School District. Finally, test results for the past five years in how male students and female students scored on the SAT are given for both Pine-Richland School District and the Total Group so that comparisons can be made. Specific data can be found on the following pages:

- Pine-Richland, Pennsylvania, and Total Group Average Scores, page 52 - 53.
- Pine-Richland Participation over Time, page 52 - 53.
- Pine-Richland and Total Group Scores by Gender, pages 54 - 55.
- Findings and Areas for Future Study, page 56.

**Total Group Average Critical Reading SAT Scores by Gender Over Time**

**PRSD Average Writing SAT Scores by Gender over Time**

**Total Group Average Writing SAT Scores by Gender Over Time**

**SAT: Results and Findings**

- In 2013, PRSD students had the highest combined total of 1676 on the SAT in school history..
- SAT writing results demonstrate a five year positive trend.
- Each score in math, critical reading and writing was at a five year high in 2013.
- PRSD students outperformed both the Total Group (i.e., US and International) and Pennsylvania in math, critical reading and writing.
- Over the past five years, the number of graduates taking the SAT has increased and the percentage is stable at approximately 88%.
- In 2013, the PRSD average writing score was higher than the average critical reading score, a result opposite from state and total group scores in writing and critical reading.
- From a gender comparison, a gap has existed in SAT results at the national level. Historically, male students outperform female students in both math and reading while female students outperform male students in writing.
- At PRSD, male students outperform female students in SAT math at a similar ratio to the national average.
- At PRSD, female students outperform male students in the SAT reading and writing results at levels that contrast the national results. In writing, female students outperformed males by 25 scaled score points.

**Areas for Future Study**

- How or do we align instructional strategies and/or content to prepare students for the SAT?
- Are courses offered to assist students?
- Do students understand the differences between the SAT and ACT tests and know which one(s) to take?
- Why are the male and female math scores closer on the PSSA tests than the SAT tests? Are different high school courses chosen by male students than female students?

## **American College Test (ACT)**

The ACT is designed to measure high school students' general education development and their ability to complete college-level work. The ACT measures skills in English, math, reading, and science reasoning. Test results can help students with career as well as educational planning. The highest possible scaled score for each subject area test as well as a composite score across all four subject areas is 36. Beginning in 2013, Pennsylvania's School Performance Profile reports the number of seniors taking the ACT who achieved a composite score of 22 or above. At Pine-Richland, 160 out of 206 students (77.7%) met this mark.

In the pages that follow are test results for the past five years for Pine-Richland School District, Pennsylvania, and United States students in math, reading, English, and science as well as their composite scores. Pine-Richland School District participation rates are given for five years both generally and disaggregated by gender. Finally, math, reading, English, science and composite test scores for Pine-Richland School District by gender are presented for the past five years.

The specific page numbers of the different types of data are:

- Average PRSD ACT Scores over Time, pages 58 - 59.
- PRSD Average ACT Test Scores vs. State and National Average Scores, pages 58 - 61.
- PRSD ACT Participation Rates over Time and by Gender over Time, pages 60 - 61.
- PRSD Average ACT Scores by Gender over Time, pages 62 - 63.
- Findings and Areas for Future Study, page 64.

## **ACT: Results and Findings**

- PRSD student performance on the ACT is stable in all tested areas and in the composite score (i.e., math, reading, English, science, and composite).
- The percentage of students taking the ACT has increased from 40.5% in 2009 to a historic high of 55.4% in 2013. This mirrors a national increase in ACT participation.
- Male and female performance on the ACT is similar: males slightly outperform females in math and science; and females outperform males in reading, English, and the composite score.
- PRSD students outperform students as compared to other students in Pennsylvania and the United States.

## **Areas for Future Study**

- How or do we align instructional strategies and/or content to prepare students for the ACT?
- Are courses offered to assist students?
- Do students understand the differences between the SAT and ACT tests and know which one(s) to take?
- Why are the male and female math scores closer on the PSSA tests than the ACT tests? Are different high school courses chosen by male students than female students?

## Advanced Placement (AP) Test

AP tests are published by the College Board. By taking Advanced Placement courses and taking the AP tests, students have the opportunity to experience college-level work in high school and gain valuable skills and study habits for college. At Pine-Richland School District, students enrolled in AP courses must take the end-of-course AP exam. Scores range from a low of one through a high of five, with a five indicating a student is well-qualified to receive college credit and/or advanced placement in college programs. Colleges and universities vary in the ways they use AP test scores.

Test results for the subjects in which at least 10 students have taken the AP test over the past five years are included in the pages that follow. Each of these subjects is offered as a course at Pine-Richland High School. Subjects in which fewer than 10 students have taken the AP test over the past five years but for which Pine-Richland High School has offered the course include Computer Science A, Physics, and Studio Art: 3-D Design. AP subjects not offered as courses at Pine-Richland High School include Art History, Comparative Government and Politics, Environmental Science, Latin, Microeconomics, Music Theory, and World History.

For the 2013 School Performance Profile, Pennsylvania tracked how many seniors scored a 3 or above on an AP test. At Pine-Richland, 242 seniors took an AP test and, of those seniors, 171 (70.7%) scored a 3 or above. Specific test results and findings are presented in the pages listed below:

- Pine-Richland AP Test Participation over Time, pages 66 - 67.
- Pine-Richland AP Test Performance vs. State and Global Performance, pages 66 - 67.

## **AP Tests: Results and Findings**

- The total number of students taking an AP course and test has increased significantly in the last five years.
- Comparing 2009 and 2013, the number of AP students has increased from 296 to 450; the number of AP tests taken has increased from 529 to 944; and the total number of test results at a 3 or above has grown from 210 to 337.
- A greater percentage of PRSD students (74.9%) score at a 3 or above on AP tests than do state (68.3%) or worldwide students (60.9%).
- Of the 17 AP courses offered at PRSD, 8 courses have average test scores between 3.0 and 3.49, 5 courses have average test scores of 3.5 and above, and 5 courses have average test scores below 3.0.
- Six AP courses show a three year trend of enrollment growth, including Calculus BC, English Language, English Literature, Microeconomics, Statistics and US Government and Politics.
- Four AP courses demonstrate a three year trend of average score increase, including Chemistry, English Language, Spanish Language, and Studio Art: 2-D Design.
- Six AP courses have average scores that were the highest for each subject area in the past five years, including Calculus AB, Chemistry, English Language, European History, Spanish Language and Studio Art: 2-D Design.

## **Areas for Future Study**

- Are there gender differences in AP enrollment and test scores?
- What are teachers doing differently over time such that their test scores keep improving?
- Do teachers of AP courses receive regular, on-going professional development from College Board in the development and teaching of AP curriculum?

## Conclusion and Next Steps

The 2013 *Academic Achievement Report* included a significant amount of data from a variety of standardized tests. Where possible, five years of data were included for the purpose of establishing a historical record of those results within a single report. Results demonstrate that Pine-Richland School District students are performing at a consistently high level on each assessment as compared to average performance at the state, national, and even international levels. Given the district scale of the data, it is important to continue “drilling down” through various levels of results to the classroom and even student data.

As we continue to focus on organizational improvement, it is the intention of Pine-Richland School District to utilize data analysis as one important element in a series of systematic processes. The Executive Summary of this report introduced the concepts of “assessment of learning” and “assessment for learning.” It is important that a variety of assessments, such as classroom-based formative assessments, are utilized to guide instruction in a more practical manner. The connections between results from various types of assessment should be used in conjunction with the processes for developing curriculum and instruction in the district.

The *Pine-Richland School District Strategic Plan* serves as an important resource in guiding the work of the staff and community. Several emerging strategic priorities are becoming evident. Examples include: Data Analysis Approach; Academic Leadership Council; Curriculum Audit; Curriculum Review Process; and Intervention Framework and Approach. There are significant linkages between these areas. High performing organizations are able to integrate the findings from one aspect of the program into other areas. For example, trend data on a particular math standard may lead to further analysis in a curriculum audit and recommendations for improvement through a systematic curriculum review process. Principals, assistant principals, and teacher-leaders will be more heavily involved in the future iterations of this process.
