

## WGSD Curriculum – Math 4<sup>th</sup> Grade

In Grade 4, instructional time will focus on three critical areas: (1) developing understanding and fluency with multi-digit multiplication, and developing understanding of dividing to find quotients involving multi-digit dividends; (2) developing an understanding of fraction equivalence, addition and subtraction of fractions with like denominators, and multiplication of fractions by whole numbers and (3) understanding that geometric figures can be analyzed and classified based on their properties, such as having parallel sides, perpendicular sides, particular angle measures, and symmetry.

While the content learning goals describe the mathematics students should be able to understand and do, the first eight learning goals (The Standards for Mathematical Practice) describe how students should engage with these mathematical concepts and skills as they grow in mathematical maturity and expertise. Teachers will connect the mathematical practices to mathematical content in all mathematics instruction. These learning goals merit the most time, resources, innovation, and focus necessary to qualitatively improve the instruction, assessment, and student achievement in mathematics.

## WGSD Curriculum – Math 4<sup>th</sup> Grade

Students will be able to make sense of problems and persevere in solving them.

Students will be able to reason abstractly and quantitatively.

Students will be able to construct viable arguments and critique the reasoning of others.

Students will be able to model with mathematics.

Students will be able to use appropriate tools strategically.

Students will be able to attend to precision.

Students will be able to look for and make use of structure.

Students will be able to look for and express regularity in repeated reasoning.

**Students will be able to use the four operations with whole numbers to solve problems.**

**Students will gain familiarity with factors and multiples.**

**Students will be able to generate and analyze patterns.**

**Students will be able to generalize place value understanding for multi-digit whole numbers.**

**Students will be able to use place value understanding and properties of operations to perform multi-digit arithmetic.**

**Students will understand fraction equivalence and ordering.**

**Students will be able to build fractions from unit fractions.**

**Students will be able to understand decimal notation for fractions and compare decimal fractions.**

**Students will be able to solve problems involving measurement and conversion of measurements.**

**Students will understand concepts of angle and measure angles.**

**Students will be able to draw and identify lines and angles and classify shapes by properties of their lines and angles.**

**Students will be able to represent and interpret data.**

## WGSD Curriculum – Math 4<sup>th</sup> Grade

- Provides time and facilitates discussion in problem solutions.
- Facilitates discourse in the classroom so that students UNDERSTAND the approaches of others.
- Provides opportunities for students to explain themselves, the meaning of a problem, etc.
- Provides opportunities for students to connect concepts to “their” world.
- Provides students TIME to think and become “patient” problem solvers.
- Facilitates and encourages students to check their answers using different methods (not calculators).
- Provides problems that focus on relationships and are “generalizable”.

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Relationships and Algebraic Thinking*

**High Priority Standards**

4.RA.A.1 Multiply or divide to solve problems involving a multiplicative comparison.

4.RA.A.2 Solve multi-step whole number problems involving the four operations and variables and using estimation to interpret the reasonableness of the answer.

4.RA.A.3 Solve whole number division problems involving variables in which remainders need to be interpreted, and justify the solution.

**Learning Goal**

Students will be able to use the four operations with whole numbers to solve problems.

**Proficiency Scale**

Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

Meeting: Student demonstrates mastery with the learning goal as evidenced by:

- Using the four operations solve multi-step whole number word problems.
- Solving whole number division word problems in which remainders need to be interpreted.
- Finding an unknown number and representing problems using equations with a letter representing the unknown quantity.
- Assessing the reasonableness of answers using mental computation and estimation strategies.
- Multiplying or dividing to solve word problems involving multiplicative comparison.

Approaching: Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: sum, difference, product, quotient, number model, equation, expression, whole number.
- Performing processes such as:
  - Using the four operations to solve one-step problems involving an unknown number.
  - Applying multiplication or division in order to solve familiar multiplicative comparison problems.

Beginning: Student demonstrates a limited understanding or skill with the learning goal by using the four operations (add, subtract, multiply, and divide) to solve one-step problems involving equal groups and arrays.

## WGSD Curriculum – Math 4<sup>th</sup> Grade

### Learning Targets

- Multiply or divide to solve word problems involving multiplicative comparison. (*e.g., Brad ran 5 laps. Gerry ran three times as many laps as Brad. How many laps did Gerry run? Janet ate 12 cookies. This was four times as many as Lori ate. How many did Lori eat?*). Interpret  $35 = 5 \times 7$  as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.
- Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies.

### Learning Design

Investigations Units 1, 3, 5, & 7

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Relationships and Algebraic Thinking*

**High Priority Standards**

4.RA.B.4 Recognize that a whole number is a multiple of each of its factors and find the multiples for a given whole number

4.RA.B.5 Determine if a whole number within 100 is composite or prime, and find all factor pairs for whole numbers within 100.

**Learning Goal**

Students will gain familiarity with factors and multiples.

**Proficiency Scale**

Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

Meeting: Student demonstrates mastery with the learning goal as evidenced by:

- Finding all factor pairs for whole numbers in the range of 1–100.
- Finding multiples for a given whole number within 100.
- Determining whether a given whole number in the range of 1–100 is prime or composite.

Approaching: Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: factor, multiple, factor pair, whole number, prime, composite, square number, array.
- Performing processes such as:
  - Finding factor pairs for whole numbers in the range of 1–100 that are multiples of 2 or 5.
  - Determining whether a given whole number in the range of 1–100 is a multiple of a given one-digit number.

Beginning: Student demonstrates a limited understanding or skill with the learning goal by recognizing that a whole number is a multiple of each of its factors.

**Learning Targets**

- Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite

**Learning Design**

Investigations Unit 1

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Relationships and Algebraic Thinking*

**High Priority Standards**

4.RA.C.6 Generate a number pattern that follows a given rule.

4.RA.C.7 Use words or mathematical symbols to express a rule for a given pattern.

**Learning Goal**

Students will be able to generate and analyze patterns.

**Proficiency Scale**

Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

Meeting: Student demonstrates mastery with the learning goal as evidenced by:

- Analyzing a pattern for apparent features that are not explicit in the rule itself.
- Using words to express a rule for a given pattern.
- Using an equation to express a rule for a given pattern.

Approaching: Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: number, pattern, rule, shape, term, sequence.
- Performing a process such as generating a numeric pattern when given the starting number and given the rule.

Beginning: Student demonstrates a limited understanding or skill with the learning goal by extending a number or shape pattern that follows a given rule.

**Learning Targets**

- Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself
  - *For example, given the rule “Add 3” and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way*
- Use words or mathematical symbols to express the rule for a given pattern. (e.g., “starting at zero add three to each term; starting at three add two each time”)

**Learning Design**

Investigations Unit 8

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Number Sense and Operations in Base Ten*

**High Priority Standards**

- 4.NBT.A.1 Round multi-digit whole numbers to any place.  
4.NBT.A.2 Read, write and identify multi-digit whole numbers up to one million using number names, base ten numerals and expanded form.  
4.NBT.A.3 Compare two multi-digit numbers using the symbols  $>$ ,  $=$  or  $<$ , and justify the solution.  
4.NBT.A.4 Understand that in a multi-digit whole number, a digit represents 10 times what it would represent in the place to its right.

**Learning Goal**

Students will be able to generalize place value understanding for multi-digit whole numbers.

**Proficiency Scale**

Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

Meeting: Student demonstrates mastery with the learning goal as evidenced by:

- Reading, writing, and identifying multi-digit whole numbers less than or equal to 1,000,000 using base-ten numerals, number names, and expanded form.
- Comparing multi-digit numbers up to 1,000,000 using  $<$ ,  $>$ , and  $=$ .
- Rounding multi-digit whole numbers up to 1,000,000 to any place.
- Describing that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right.

Approaching: Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: base-ten numeral, compare, digit, expanded form, multi-digit number, number name, place, place value, round, whole number, greater than, less than, equal.
- Performing processes such as:
  - Reading, writing, and identifying multi-digit whole numbers less than or equal to 100,000 using base-ten numerals, number names, and expanded form.
  - Comparing multi-digit numbers up to 100,000 using  $<$ ,  $>$ , and  $=$ .
  - Rounding multi-digit whole numbers up to 100,000 to any place.

Beginning: Student demonstrates a limited understanding or skill with the learning goal by:

- Reading, writing, and identifying multi-digit whole numbers less than or equal to 1,000 using base-ten numerals, number names, and expanded form.
- Comparing multi-digit numbers up to 1,000 using  $<$ ,  $>$ , and  $=$ .
- Rounding multi-digit whole numbers up to 1,000 to any place.

## WGSD Curriculum – Math 4<sup>th</sup> Grade

### Learning Targets

- Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. *For example, recognize that  $700 \div 70 = 10$  by applying concepts of place value and division*
- Read, write, and identify multi-digit whole numbers up to 1,000,000 using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using  $<$ ,  $>$ , and  $=$  symbols to record the results of comparisons
- Use place value understanding to round multi-digit whole numbers to any place in the context of estimation.

### Learning Design

Investigations Units 1, 3, 5, & 7

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Number Sense and Operations in Base Ten*

**High Priority Standards**

4.NBT.A.5 Demonstrate fluency with addition and subtraction of whole numbers.

4.NBT.A.6 Multiply a whole number of up to four digits by a one-digit whole number and multiply two two-digit numbers, and justify the solution.

4.NBT.A.7 Find whole-number quotients and remainders with up to four digit dividends and one-digit divisors, and justify the solution.

**Learning Goal**

Students will be able to use place value understanding and properties of operations to perform multi-digit arithmetic.

**Proficiency Scale**

**Innovating:** Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

**Meeting:** Student demonstrates mastery with the learning goal as evidenced by:

- Adding and subtracting multi-digit whole numbers fluently using the standard algorithm.
- Multiplying whole numbers including two digits by two digits based on place value and properties of operations
- Finding whole-number quotients and remainders with up to four-digit dividends and one-digit divisors using strategies based on place value understanding, the properties of operations, and/or the relationship between multiplication and division.
- Solving and explaining multiplication and division using equations, arrays, and/or area models.

**Approaching:** Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: sum, difference, product, quotient, whole number, equation, expression, remainder, array, area model.
- Performing processes such as:
  - Adding and subtracting two- and three-digit whole numbers using a standard algorithm.
  - Multiplying whole numbers up to and including four digits by one digit based on place value and properties of operations.
  - Finding whole-number quotients and remainders with up to two-digit dividends and one-digit divisors using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division.
  - Representing multiplication and division problems using equations, arrays, and/or area models.

**Beginning:** Student demonstrates a limited understanding or skill with the learning goal by:

- Adding and subtracting one- and two-digit whole numbers using strategies based on place value.
- Multiplying two one-digit whole numbers based on place value and properties of operations.
- Finding whole-number quotients with no remainders with up to two-digit dividends and one-digit divisors using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division.

## WGSD Curriculum – Math 4<sup>th</sup> Grade

### Learning Targets

- Add and subtract multi-digit whole numbers fluently using the standard algorithm
- Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models
- Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models

### Learning Design

Investigations Units 1, 3, 5, & 7

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Number Sense and Operations in Fractions*

**High Priority Standards**

- 4.NF.A.1 Explain and/or illustrate why two fractions are equivalent.  
 4.NF.A.2 Recognize and generate equivalent fractions.  
 4.NF.A.3 Compare two fractions using the symbols  $>$ ,  $=$  or  $<$ , and justify the solution.

**Learning Goal**

Students will understand fraction equivalence and ordering.  
 (Limit denominators to 2, 3, 4, 5, 6, 8, 10, 12 and 100.)

**Proficiency Scale**

- Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.
- Meeting: Student demonstrates mastery with the learning goal as evidenced by:
- Comparing two fractions with different numerators and different denominators using  $<$ ,  $>$ , and  $=$  by creating common denominators or numerators.
  - Recognizing and generating equivalent fractions.
- Approaching: Student demonstrates they are nearing the learning goal by:
- Recognizing and recalling specific vocabulary, such as: numerator, denominator, mixed number, improper fraction, equivalent fraction, common denominator, common numerator, whole, part.
  - Performing processes such as:
    - Comparing two fractions with different numerators and different denominators using  $<$ ,  $>$ , and  $=$  by comparing to a benchmark fraction such as  $\frac{1}{2}$ .
    - Recognizing equivalent fractions using visual models.
- Beginning: Student demonstrates a limited understanding or skill with the learning goal by recognizing that fraction comparisons are valid only when the two fractions are referring to the same whole.

**Learning Targets**

- Explain and/or illustrate why two fractions are equivalent.
- Recognize, identify, and generate equivalent fractions.
- Select models of equivalent fractions.
- Compare two fractions and justify the solution by using a number line or a visual fraction model. Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as  $\frac{1}{2}$ . Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols  $<$ ,  $>$ , or  $=$ , and justify the conclusions, e.g., by using a visual fraction model

**Learning Design**

Investigations Unit 6

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Number Sense and Operations in Fractions*

**High Priority Standards**

- 4.NF.B.4 Understand addition and subtraction of fractions as joining/composing and separating/decomposing parts referring to the same whole.
- 4.NF.B.5 Decompose a fraction into a sum of fractions with the same denominator and record each decomposition with an equation and justification.
- 4.NF.B.6 Solve problems involving adding and subtracting fractions and mixed numbers with like denominators.
- 4.NF.B.7 Apply and extend previous understandings of multiplication to multiply a fraction by a whole number.
- 4.NF.B.8 Solve problems involving multiplication of a fraction by a whole number.

**Learning Goal**

Students will be able to build fractions from unit fractions.

**Proficiency Scale**

Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

Meeting: Student demonstrates mastery with the learning goal as evidenced by:

- Solving word problems involving multiplication of a fraction by a whole number.
- Solving word problems involving addition and subtraction of fractions and mixed numbers with like denominators.
- Decomposing a fraction into a sum of fractions with the same denominator in more than one way and recording each decomposition with an equation and justification.

Approaching: Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: decompose, denominator, numerator, equivalent, express, mixed number, part, whole, improper fraction, common denominator.
- Performing processes such as:
  - Solving one-step problems involving multiplication of a fraction by a whole number.
  - Solving one-step problems involving addition and subtraction of fractions and mixed numbers with like denominators.
  - Using visual fraction models and/or equations to represent the problem.

Beginning: Student demonstrates a limited understanding or skill with the learning goal by:

- Identifying fractions using visual models.

## WGSD Curriculum – Math 4<sup>th</sup> Grade

### Learning Targets

- Combine fractions with like denominators to make a fraction or whole number using a visual model.
- Separate a whole or fraction to make fractional parts using a visual model.
  - Understand addition and subtraction of fractions as joining and separating parts referring to the same whole
  - Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation. Justify decompositions, e.g., by using a visual fraction model or number line
    - *Examples:  $3/8 = 1/8 + 1/8 + 1/8$ ;  $3/8 = 1/8 + 2/8$ ;  $2\ 1/8 = 1 + 1 + 1/8 = 8/8 + 8/8 + 1/8$*
  - Add and subtract mixed numbers with like denominators. (Sums and differences may be expressed in equivalent forms and simplified forms are not required.)(e.g.,  $1/4 + 2/4 = 3/4$ ;  $2\ 1/8 + 3/8 = 2\ 4/8$ ;  $3\ 1/3 + 2\ 2/3 = 5\ 3/3$ )
  - Solve word problems involving addition and subtraction of fractions with like denominators, e.g., by using visual fraction models and equations to represent the problem
- Apply and extend previous understandings of multiplication to multiply a fraction by a whole number
  - Given the multiplication problem and asked to find repeated addition or equal groups. *Use a visual fraction model to represent  $5/4$  as the product  $5 \times (1/4)$ , recording the conclusion by the equation  $5/4 = 5 \times (1/4)$*
  - Given the repeated addition or equal groups and asked to find the multiplication equation.
  - Solve word problems involving multiplication of a fraction by a whole number. *For example, if each person at a party will eat  $3/8$  of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers does your answer lie?*
  - Find the product of a fraction and a whole number.

### Learning Design

Investigations Unit 6

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Number Sense and Operations in Fractions*

**High Priority Standards**

- 4.NF.C.9 Use decimal notation for fractions with denominators of 10 or 100.  
 4.NF.C.10 Understand that fractions and decimals are equivalent representations of the same quantity.  
 4.NF.C.11 Read, write and identify decimals to the hundredths place using number names, base ten numerals and expanded form.  
 4.NF.C.12 Compare two decimals to the hundredths place using the symbols  $>$ ,  $=$  or  $<$ , and justify your solution.

**Learning Goal**

Students will be able to understand decimal notation for fractions and compare decimal fractions.  
 (limited to fractions with denominators 10 and 100)

**Proficiency Scale**

- Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.
- Meeting: Student demonstrates mastery with the learning goal as evidenced by:
- Comparing two decimals to the hundredths place using  $>$ ,  $<$ ,  $=$ , or on a number line.
  - Comparing decimals by reasoning about their size.
  - Using fractions and decimals interchangeably to represent the same quantity.
  - Reading, writing and identifying decimals to the hundredths place using number names, base ten numerals and expanded form.
- Approaching: Student demonstrates they are nearing the learning goal by:
- Recognizing and recalling specific vocabulary, such as: compare, comparison, decimal, fraction, tenth, hundredth, notation.
  - Performing processes such as expressing a fraction with denominator 10 as an equivalent fraction with denominator 100 and expressing those fractions as decimals.
- Beginning: Student demonstrates a limited understanding or skill with the learning goal by:
- Renaming a fraction with a denominator of 10 or 100 as a decimal.
  - Renaming a decimal as a fraction with a denominator of 10 or 100.

**Learning Targets**

- Express a fraction with denominator 10 as an equivalent fraction with denominator 100, *For example, express  $3/10$  as  $30/100$ ,*
- Use decimal notation for fractions with denominators 10 or 100. *For example, rewrite  $0.62$  as  $62/100$ ; describe a length as  $0.62$  meters; locate  $0.62$  on a number line diagram*
- Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols  $>$ ,  $=$ , or  $<$ , and justify the conclusions, e.g., by using a visual model

**Learning Design**

Investigations Unit 6

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Geometry and Measurement*

**High Priority Standards**

4.GM.C.6 Know relative sizes of measurement units within one system of units. a. Convert measurements in a larger unit in terms of a smaller unit.

4.GM.C.7 Use the four operations to solve problems involving distances, intervals of time, liquid volume, weight of objects and money.

4.GM.C.8 Apply the area and perimeter formulas for rectangles to solve problems.

**Learning Goal**

Students will be able to solve problems involving measurement and conversion of measurements.

**Proficiency Scale**

Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

Meeting: Student demonstrates mastery with the learning goal as evidenced by:

- Using the four operations to solve word problems involving distances, intervals of time, liquid volume, weight of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit.
- Choosing the correct unit of measurement for a given situation within a single system.
- Applying the perimeter and area formulas to rectangles in word problems.
- Finding the missing side of a rectangle, given the area or perimeter and the other side length.

Approaching: Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: centimeter, meter, kilometer, gram, kilogram, liter, milliliter, ounce, pound, decimal, fraction, volume, distance, mass, liquid, hour, minute, second, time money, interval, measurement.
- Performing processes such as:
  - Expressing measurements in a larger unit in terms of a smaller unit within a single system of measurement.
  - Applying the perimeter formula to rectangles in mathematical problems.

Beginning: Student demonstrates a limited understanding or skill with the learning goal by:

- Knowing relative sizes of measurement units within one system of units, including in., ft., yd.; km, m, cm; kg, g; lb, oz; l, ml; pt., qt., gal.; and hr, min, sec.

## WGSD Curriculum – Math 4<sup>th</sup> Grade

### Learning Targets

- Know relative sizes of measurement units within one system of units including in., ft., yd.; km, m, cm; kg, g; lb, oz; l, ml; pt., qt., gal.; and hr, min, sec.
- Within a single system of measurement, express measurements in a larger unit in terms of a smaller unit. *For example, know that 1 ft is 12 times as long as 1 in. Express the length of a 4 ft snake as 48 in.*
- Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit.
- Apply the area and perimeter formulas for rectangles in real world and mathematical problems. *(For this grade level, area problems involve whole-number side lengths and division problems involve single digit divisors.) (e.g., find the width of a rectangular room given the area of the flooring and the length)*

### Learning Design

Investigations Units 4 & 7

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Geometry and Measurement*

**High Priority Standards**

4.GM.B.4 Identify and estimate angles and their measure.

4.GM.B.5 Draw and measure angles in whole-number degrees using a protractor.

**Learning Goal**

Students will understand concepts of angle and measure angles.

**Proficiency Scale**

Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

Meeting: Student demonstrates mastery with the learning goal as evidenced by:

- Constructing angles in whole-number degrees using a protractor.
- Estimating the measure of an angle.
- Defining angles as shapes that are formed wherever two rays share a common endpoint.

Approaching: Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: protractor, angle, degree, ray, endpoint.
- Performing processes such as:
  - Recognizing whole-number degrees on a protractor.
  - Measuring angles in whole-number degrees using a protractor.

Beginning: Student demonstrates a limited understanding or skill with the learning goal by measuring angles in whole-number degrees using a protractor, with help, or inconsistently.

**Learning Targets**

- Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement:
  - An angle is measured with reference to a circle with its center at the common endpoint of the rays.
- Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.

**Learning Design**

Investigations Unit 4

## WGSD Curriculum – Math 4<sup>th</sup> Grade

### *Geometry and Measurement*

#### High Priority Standards

4.GM.A.1 Draw and identify points, lines, line segments, rays, angles, perpendicular lines and parallel lines.

4.GM.A.2 Classify two-dimensional shapes by their sides and/or angles.

4.GM.A.3 Construct lines of symmetry for a two-dimensional figure.

#### Learning Goal

Students will be able to draw and identify lines and angles and classify shapes by properties of their lines and angles.

#### Proficiency Scale

**Innovating:** Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

**Meeting:** Student demonstrates mastery with the learning goal as evidenced by:

- Drawing all lines of symmetry for two-dimensional figures.
- Classifying two-dimensional shapes based on sides and angles of the shape.
- Classifying two-dimensional shapes into more than one category.

**Approaching:** Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: point, line, line segment, ray, angle, right, acute, obtuse, perpendicular, parallel, figure, symmetry, line of symmetry.
- Performing processes such as:
  - Identifying points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines in two-dimensional figures .
  - Identifying lines of symmetry in two-dimensional figures.

**Beginning:** Student demonstrates a limited understanding or skill with the learning goal by:

- Drawing points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines.

#### Learning Targets

- Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures
- Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. The focus should be on triangles and quadrilaterals.
- Construct lines of symmetry for a two-dimensional figure.
- Identify lines of symmetry for a two-dimensional figure.

#### Learning Design

Investigations Unit 4

WGSD Curriculum – Math 4<sup>th</sup> Grade  
*Data and Statistics*

**High Priority Standards**

- 4.DS.A.1 Create a frequency table and/or line plot to display measurement data.  
 4.DS.A.2 Solve problems involving addition and subtraction by using information presented in a data display.  
 4.DS.A.3 Analyze the data in a frequency table, line plot, bar graph or picture graph.

**Learning Goal**

Students will be able to represent and interpret data.

**Proficiency Scale**

Innovating: Student demonstrates an in-depth inference or advanced application, or innovates with the learning goal.

Meeting: Student demonstrates mastery with the learning goal as evidenced by:

- Creating a line plot to represent a data set using fractions  $\frac{1}{2}$ ,  $\frac{1}{4}$ , and  $\frac{1}{8}$ .
- Interpreting data from a line plot to solve problems involving addition and subtraction of fractions with like denominators.
- Creating a frequency table to display measurement data.
- Analyzing the data in a frequency table, line plot, bar graph or picture graph.

Approaching: Student demonstrates they are nearing the learning goal by:

- Recognizing and recalling specific vocabulary, such as: data, fraction, line plot, measurement, unit.
- Performing a process such as:
  - Using data from a given line plot using fractions  $\frac{1}{2}$ ,  $\frac{1}{4}$ , and  $\frac{1}{8}$  to solve one-step problems.
  - Finding the mode and range from a frequency table, line plot, bar graph or picture graph.

Beginning: Student demonstrates a limited understanding or skill with the learning goal by:

- Identifying data from a given line plot using whole numbers.
- Identifying a frequency table for a given set of measurement data.

**Learning Targets**

- Create a frequency table and/or line plot with the scale marked in whole numbers and/or fractions of a unit ( $\frac{1}{2}$ ,  $\frac{1}{4}$ ,  $\frac{1}{8}$ ) to display a data set of measurements.
- Solve problems involving addition and subtraction of fractions by using information presented in a data display (e.g., line plot, bar graph, picture graph, frequency table)
  - *For example, from a line plot find and interpret the difference in length between the longest and shortest specimens in an insect collection*
- Analyze the data in a frequency table, line plot, bar graph or picture graph to include determining the mode and range. (At this grade level, fraction operations use only like denominators.)

**Learning Design**
