

# DATA SCIENCE

## Course Overview

April 18, 2024

LARA GRECO AND DEREK TU - LBHS MATHEMATICS

**LAGUNA BEACH**  
UNIFIED SCHOOL DISTRICT

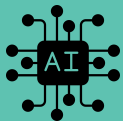

# PURPOSE

Exposure to an increasingly data-driven landscape.

Understanding how data is used can help create a more responsible and informed society.

Machine learning is universally relevant in all fields of study and career paths.

# Statistics:

what we do now

Procedural

Students are given:

- clean, curated,  
and finite data sets
- the story or scenarios
- target objective

# Data Science:

where we want to be

Conceptual

Students:

- given large, raw datasets
- construct a story from the  
data
- figure out what questions to  
ask

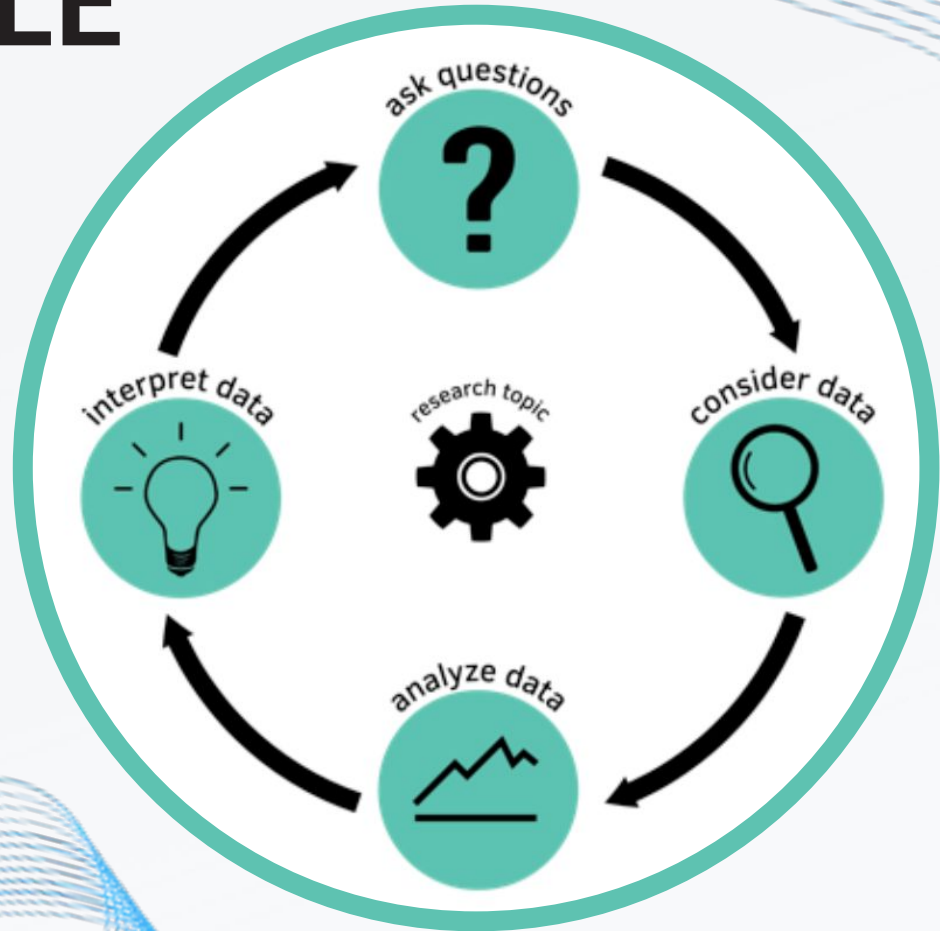

**Mathematic:  
Statistics**

**Data  
Science**

**Computer  
Science:  
Programming**

# DATA CYCLE

Theme

1

## **DATA AND VISUALIZATION**

- Fundamentals of data analysis—such as distributions and multivariate associations
- Use technology to create and interpret visualizations of real-world processes captured by data

Theme

2

## **DISTRIBUTIONS, PROBABILITY, & SIMULATIONS**

- Students use numerical summaries to describe distributions
- Introduce probability through the lens of computer simulations for informal inference

Theme

3

## **DATA COLLECTION METHODS**

- Learn various ways to ethically and practically collect data
- Use Participatory Sensing (i.e. Fitbit study)
- Learn consequences of poor data collection methods

Theme

4

## **PREDICTIONS AND MODELS**

- Create and utilize statistical models to predict future observations
- Measure the success of these predictions

# UNITS OF STUDY

1

DESCRIBING & VISUALIZING  
CATEGORICAL/QUANTITATIVE DATA

2

USING TECHNOLOGY TO EXPLORE  
DATASETS

3

PROBABILITY

4

MACHINE LEARNING/PREDICTIVE  
MODELING

5

DATA COLLECTION METHODS

6

EXPERIMENTAL DESIGN

7

INFERENCE

8

DATA SCIENCE CAREER PATHWAYS

# STUDENT FEEDBACK

"Statistics and Data Science can help to understand real-life data that means something to us. I want to be a sports agent so this is the perfect course for me."

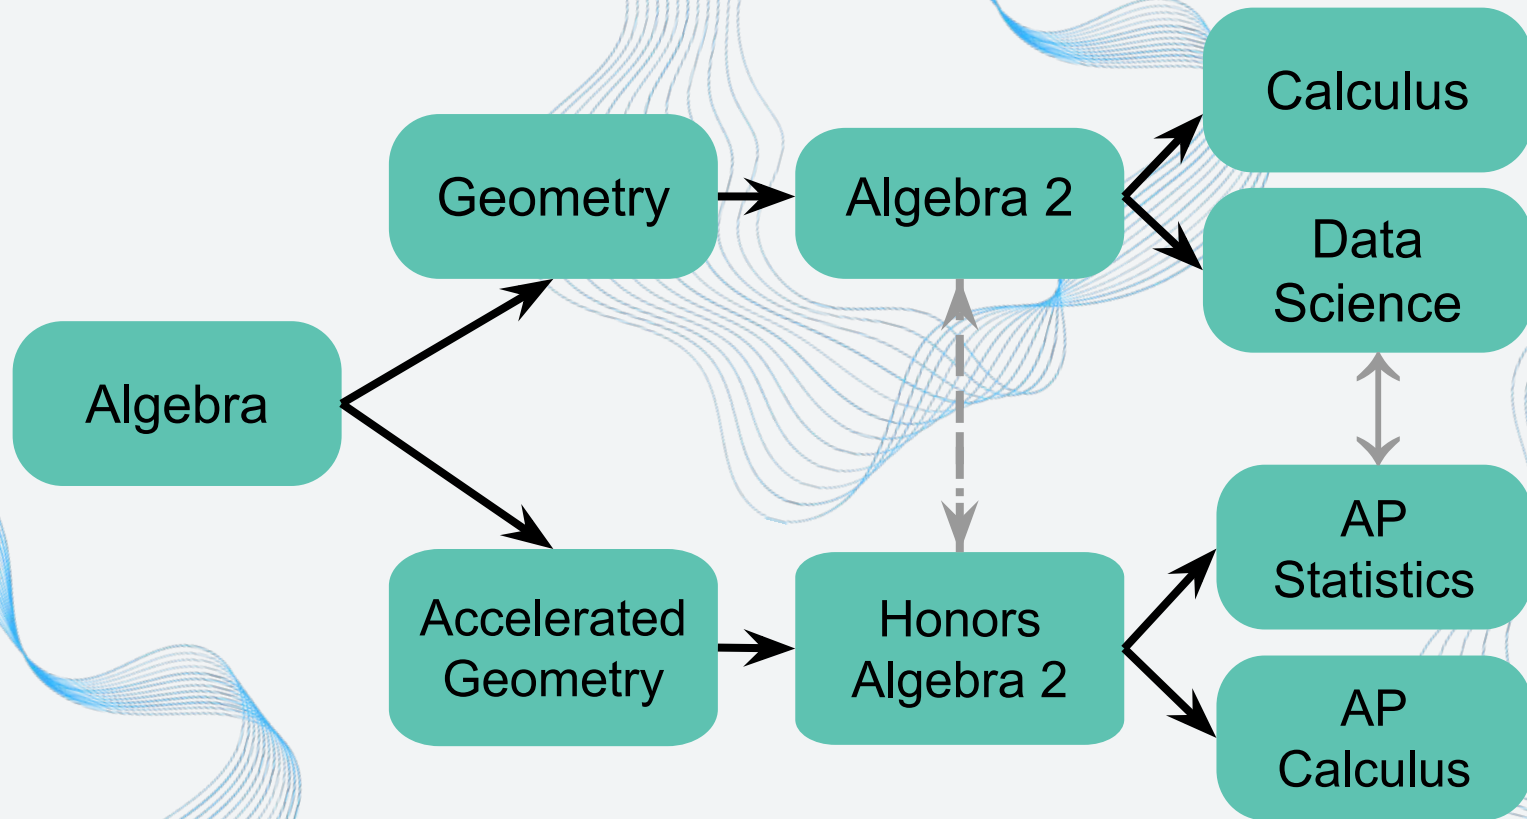

"I chose to take Statistics and Data Science because it is the most relevant math course offered at LBHS, especially considering this day and age."

"I enjoy our focus on data analysis instead of more hand calculation-based problems. It allows us to learn and prepare for situations we might face in real life. Being able to interpret graphs and use Google Sheets is very important and allows us to collaborate and hear peers' perspectives."

"The data science class would be beneficial for students moving forward because analyzing data is a big part of most businesses. A course could open up new pathways for students who would not have thought about pursuing a career in data science prior."

# LBUSD Projected Math Pathways

# Further steps

1

Curriculum Council / Board Approval

2

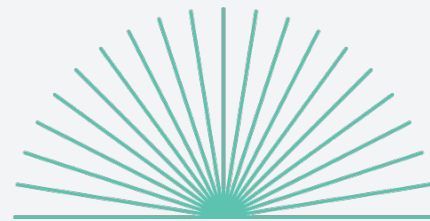

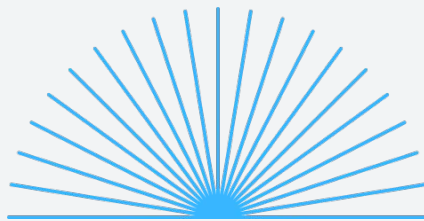

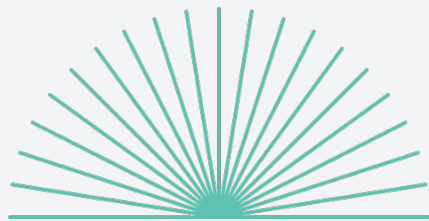

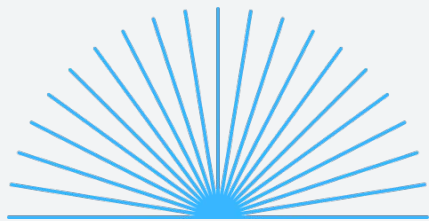

UC Course Approval

3

Teacher Professional Development

4
