Marine View Landscaping

***Chondropetalum tectorum* // Cape Rush**

South African plant which forms dense tufted clumps from which arise 2-3 foot tall dark green unbranched stems. The Plant was chosen to mimic sea plant life, which was inspired by the underwater mural. This low water plant is also low maintance.

***Muhlenbergia capillaris* // Pink Muhly**

A beautiful warm season ornamental grass with stunning pink airy flowering panicles that hover cloud-like above the fine textured olive-green foliage. This plant is drought tolerant and requires a prune once a year. The low maintance grass will grow to 2-3 feet high, with blooms getting 4 feet tall.

***Dietes bicolor* // Fortnight Lily**

An evergreen rhizomatous perennial with clusters of fans of 2 to 3 foot fall, narrow light green sword-shaped leaves. Flowering occurs off and on for most of the year but primarily in the warmer months from spring to fall. This low water, drought tolerant plant is also low maintance, requiring only periodic cleaning of dead leaves.

***Festuca 'Siskiyou Blue'* // Siskiyou Blue Fescue**

A long living cool season bunch grass with tight clumps of narrow chalky-blue foliage 12 to 18 inches tall by slightly wider with flowers stalks rising straight up about 6 inches above the foliage in late spring into early summer. This low water plant is also low maintance.

***Agave attenuata* // Fox Tail Agave**

This Agave presents none of the dangers that its spine-covered relatives do. Its soft pale green leaves contain no teeth or terminal spines. This low water plant is also very low maintance.

***No Mow Fescue* // No Mow Fine Leaf Fescue**

This California native fescue mix is beautifully textured and mimics under water grasses, while also moving with the wind to create even further intrest. This low water, drought tolerant plant is also low maintance, requiring cutting only once or twice a year.
