

1 **2132 INSTRUCTION**

2 Research Studies

3 The District recognizes the value of participation in educational research. Studies using observation,
4 surveys, and experimentation can aid in the improvement of the instructional program in the school
5 system as well as growth in the profession and growth for individual teachers and researchers.

6 Simultaneously, the District recognizes that the amount of time available for student learning is limited
7 and must be handled carefully. It is, therefore, important that only those research studies which are of
8 the greatest value to the District should be allowed to be conducted in the school system.

9 All research proposals from outside sources will be submitted in prospective form, with the instruments
10 attached, to the Superintendent at least three (3) weeks prior to the date on which the research study is
11 to be conducted. The prospectus will include the researcher's name, address and phone number, as well
12 as a description of the purpose of the study, the procedures to be used, the treatment of the data and the
13 distribution of the study. The Superintendent will approve or disapprove all research studies. Approval
14 will be based on educational significance, project design, and disruption to the regular school process. The
15 primary criteria in approving research studies will be the value to the District. A final copy of the study will
16 be provided free of charge to the District.

17 No test, questionnaire, survey, or enumeration containing questions about a pupil's or a parent's personal
18 beliefs, practices in sex, family life, morality and religion will be administered without Board approval.
