

## Parent Survey Analysis FY22

Blue Ridge parents feel that we communicate well with them through our various communication platforms, but a preferred choice is paper-based communication. School leadership has maintained an environment where staff, parents, and the community work together to improve student achievement. They feel that their opinions and ideas are considered through surveys concerning parent and family engagement activities and decisions for the school. The survey reflects that information regarding students' academic progress is clearly disseminated to the parents, and that they are utilizing all social media platforms to stay updated on all Blue Ridge matters.

An area for growth for next year would be in the area of homework help. Parents are wanting to learn how to better support their students in reading and math at home. Implementing parent training for the various programs offered through Blue Ridge would help to strengthen the parent involvement and student success aspect at Blue Ridge. These trainings will provide support to our parents and they will gain access to valuable information regarding grades, attendance, and contact information with the use of REMIND, and this would help eliminate the hassle of coming into the building for minor changes for parents that work during the day.

**Here are the results from the Google Sheet:**
