

Solving Two-Step Equations and Inequalities

2) $-4x + 10 = -34$ original problem

$$\begin{array}{r} \textcircled{-4x} + 10 = -34 \\ -10 \quad -10 \\ \hline -4x = -44 \\ -4 \quad -4 \end{array}$$

.....locate the variable term
subtract 10 from both sides
simplify the equation
divide both sides by -4

$x = 11$ final answer!

3) $\frac{x}{7} + 19 = 4$ original problem

$$\begin{array}{r} \textcircled{\frac{x}{7}} + 19 = 4 \\ -19 \quad -19 \\ \hline 7 \cdot \frac{x}{7} = -15 \cdot 7 \end{array}$$

.....locate the variable term
subtract 19 from both sides
simplify the equation, then
 multiply by 7 on both sides
final answer!

$x = -105$

4) $-24 = \frac{x}{-5} - 9$ original problem

$$\begin{array}{r} -24 = \frac{x}{-5} - 9 \\ +9 \quad +9 \\ \hline -5 \cdot -15 = \frac{x}{-5} \cdot -5 \end{array}$$

.....locate the variable term
add 9 to both sides
simplify the equation, then
 multiply by -5 on both sides
final answer!

$75 = x$

“Showing your work on both sides is just as important as finding the correct answer. Don’t try to calculate ANYTHING before writing down the work!”

Solving Two-Step Equations and Inequalities

5) $-3x + 11 = -34$

6) $-9 = 12 + 5y$

7) $45 = \frac{x}{8} + 51$

8) $\frac{y}{-4} - 20 = -12$

EVEN MORE EXAMPLES – Careful Here!!

9) $22 - 5k = -18$

10) $-9 = 30 - 2y$

11) $-7 = -21 - \frac{x}{4}$

12) $23 - \frac{x}{5} = 32$

Solving Two-Step Equations and Inequalities

STILL MORE EXAMPLES – Decimals and Fractions!!

13) $2x + 4.5 = -2.9$

14) $\frac{2}{9}y + 21 = -11$

15) $0.4y + 5.6 = 2.4$

16) $\frac{3}{4}k - 17 = -11$

NOTES (for inequalities)

1. Follow the same procedure for solving equations.
2. ***IF YOU MULTIPLY OR DIVIDE BY A NEGATIVE NUMBER ON BOTH SIDES, YOU MUST SWITCH THE INEQUALITY SYMBOL.

EXAMPLES (for inequalities)

17) $3x - 11 \geq -20$

.....original problem

$$\begin{array}{r} \textcircled{3x} - 11 \geq -20 \\ \underline{+ 11 \quad + 11} \\ 3x \geq \underline{-9} \\ \quad \quad \quad \underline{3 \quad \quad 3} \\ x \geq -3 \end{array}$$

.....locate the variable term

.....add 11 to both sides

.....simplify the inequality

.....divide both sides by 3

.....simplify the inequality

.....graph solutions on a number line

Solving Two-Step Equations and Inequalities

18) $-2x + 14 \geq -18$

.....original problem

$$\begin{array}{r} \textcircled{-2x} + 14 \geq -18 \\ -14 \quad -14 \\ \hline \end{array}$$

.....locate the variable term

.....subtract 14 from both sides

$$\frac{-2x}{-2} \geq \frac{-32}{-2}$$

.....simplify the inequality

$$x \leq 16$$

.....divide both sides by -2

.....simplify the inequality

Switch symbol
after dividing
by a negative #

.....graph solutions on a number line

19) $-3x + 31 < 25$

20) $43 \geq 8 + 5y$

21) $30 \leq \frac{x}{-3} + 33$

22) $\frac{y}{2} - 20 < -23$
