

AP Precalculus: A Different Type of AP Course

Regardless of where you begin your high school math journey, AP Precalculus is designed for every student who is ready to take Precalculus in high school.

If you plan to complete Geometry and Algebra 2 before your senior year, you're ready for AP Precalculus!

The Benefits of AP Precalculus

Taking precalculus in high school increases your likelihood of completing a bachelor's degree by 155%. And, taking just one AP course in high school can improve your first-year college GPA and make you more likely to graduate in four years. When you take AP Precalculus, you'll:

Get the Chance to Earn College Credit

Get a GPA boost and the opportunity to earn college credit, advanced placement, or both, and stand out in the college application process.

Challenge Yourself

Tackle college-level coursework in a familiar high school setting and get more time with your teacher—140 hours compared to just 48 in a college precalculus course.

Get Additional Support

Access free digital learning and practice resources, including AP Daily videos—short on-demand videos that support what you're learning in class.
